When it is considered that average land will produce all the way from twelve to twenty tons of silage per acre, and when in addition to this it has been proven that corn can be converted into silage as quickly and as cheaply as it can be handled in any other way, it surely presents a topic to the beef producers of the corn belt that is of more than ordinary interest. A bunch of steers fed out at the Kansas Station on silage required 715 pounds of grain to make one hundred pounds of gain in silage-fed steers, and 733 pounds of grain to make one hundred pounds on steers fed no silage. Not only were the gains made by the silage-fed steers a little greater, but these sold on the market for twenty-five cents a hundred more than those without silage.

We submit this topic at this time not in the hope that there will be any sudden introduction of silos among beef producers, but rather that we consider it quite worth while to keep the matter agitated, because, without question, under certain circumstances the making of ensilage out of the corn crop is the most practicable and feasible way to handle it.

### SEEDING DOWN WITH BARLEY.

The following communication has been received from a subscriber, Mr. W. B. Starkey:

I have a piece of very rich land which I desire to get into red clover. It was recently manured heavily and I know that a cereal crop will grow very rank on it. Now, if barley is used for a nurse crop, would it be advisable to sow the seed thickly or thinly? It seems to me that if I sow thick it will smother out the clover, while on the other hand if it is seeded with barley lightly the crop will be much more apt to lodge.

Do you think it would be better to attempt to seed down to barley, or would it be advisable to sow to clover before laying the corn by?

If the chief aim in this instance is to obtain a stand of clover, and incidentally, of course, to get as much barley as possible, we would advise a light seeding of barley and a comparatively heavy seeding of clover. If there is used from six to eight pecks of barley per acre and the seed is all well covered, the chances are that a fairly good crop of barley will result and at the same time clover will not be crowded out. True, the barley may lodge as the soil is comparatively quite rich, but if it is not too thick the clover will stand a little hardship of this kind.

The plan of seeding in corn previous to the last cultivation is being adopted more and more. We have in mind a number of farmers who have succeeded in a marked degree during the last ten

The above is a reproduction of the title page of "Tools and Their Uses," an extremely valuable book which will be sent free to any of our readers who will write for it to the American Fork & Hoe Co., 1335 American Trust Building, Cleveland, Ohio. No man thoroughly understands his business unless he understands the tools and machinery he uses. This is especially true of the farmer. Be sure and write today to the above address; also, read the article on "Special Purpose Tools" on page 6 of this issue.

years in getting their meadows established in this way. Possibly the most extensive advocate of this plan is Mr. W. P. Adams, of Sac county, Iowa, who seeds down in his corn fields anywhere from one to two thousand acres annually. Mr. Adams rarely, if ever, misses a stand and he sows just before cultivating the corn the last time.

#### CEMENT FLOOR FOR HOGS.

One of our subscribers, Mr. J. D. Vorhees, sends the following communication:

I would like to have the question of hog flooring discussed in your paper. I am particularly interested in the matter of cement floors. The one objection that I see one could raise to this kind of flooring would be that it might induce rheumatism. I would like very much to hear from some of your subscribers who have used the cement floor, stating their experience along this line.

The question of the best kind of flooring for hogs is one that cannot be considered absolutely settled. Undoubtedly, the cement floor answers every practical purpose, and has but the one objection, namely, that it is rather cold during the winter and early spring months. In the case of little pigs, it is almost impossible to keep them from getting on the cement, and of course it stands to reason that this experience does not contribute to health.

Those who have used cement floors are divided in their estimate as to its value. Generally, however, it is necessary to use some wood flooring on at least part of the pen, and for this purpose one-inch lumber answers quite well. Of course, it adds a little to the expense, but if it enables one to save his little pigs, the extra expense is a small matter.

We ask our readers who have had experience with the cement floor to express their views through these columns for the benefit of others. We especially desire to have the disadvantages of this floor set forth particularly regarding the danger of inducing rheumatism.

#### PROPER NUMBER OF CORN STALKS PER ACRE.

The following communication has been received from a subscriber, Mr. J. O. Winship, of Putnam county, Ill.:

Recently I have seen discussions in your paper as to the form of ears of corn and the number to grow per acre. Years of experience have taught me that while three feet six inch rows is the standard width, it is not the best width. Three stalks per hill would give 10,668 stalks per acre, which is too thick; and two stalks per hill would give but 7,112 stalks per acre, which is too thin. Rows should be of such width as to admit of planting three kernels per hill, or narrow enough so that two kernels would produce about the same number of stalks per acre as the three per hill would. With three feet eight-inch rows three per hill would give 9,720 stalks per acre and three-foot rows two per hill would give 9,680 stalks per acre, and at that we are fortunate if we have 9,000 stalks at husking time. This would give us ninety bushels per acre at 100 ears per bushel, or, under very favorable circumstances, ninety ears per bushel would give us 100 bushels per acre, which shows the extreme difficulty of raising over 100 bushels per acre.

My experience teaches me that to increase the number of stalks per acre will diminish the yield rather than increase it. I have found that the largest variety that will safely ripen gives the largest yield. After hundreds of experiments with every type of ear, I find that to greatly increase the number of rows shortens the ear, lessens the per cent of shelled corn, makes it later and difficult to dry out. I find the best type of ear is seven and a half inches in circumference and ten inches long. If larger ears are wanted they might be increased to eight inches in circumference, and as long as desired; but I would rather increase the length than the thickness of the ear.

Ears seven and a half by ten inches will weigh a pound, and at that rate would yield 128 bushels per acre with a stand of 9,000 stalks per acre. I figure as many stalks with two ears as there are barren stalks. I consider eighteen to twenty rows about the right number. I have found that a rectangular grain gives better weight and better yield than an extremely wedge shape; that corn that shells 85 per cent shelled corn will give a better yield than corn that shells 90 per cent; and that moderately rough corn weighs out better than extremely smooth kernels. I have also found that you can run corn out more in three years than you can improve it in five. It takes nearly a lifetime to bring up run-out corn to excellence. You cannot get good seed from run-out corn even though you select good-looking ears, because the ears have been pollinated by inferior and barren stalks. I have found that the yield is fully 33.1-3 per cent better where a high grade of seed is planted than where scrub seed is used. It does not pay to try to bring up the average or to make up for missing hills by planting more kernels in some of the hills.

A number of important points are touched on by Mr. Winship. His ideal ear, for instance, being ten inches long and seven and a half inches in circumference, would make almost an ideal for any man in the corn belt, providing, of course, that it has the shape to yield about 85 per cent of grain.

The plan of choosing corn of rec-

The Homestead has been counting its list of subscribers by states to ascertain what changes have resulted from the various contingencies which cause newspaper circulations to shift from one state to another—such as removals of farmers across state lines, development of new territory or new interests in old territory, etc. The result has demonstrated remarkable stability in Homestead circulation, the proportions in the principal states of the corn belt remaining substantially the same, though there are gains everywhere. Iowa leads with 57,375 subscribers, which, by the way, is many thousands more than any other agricultural weekly published in Des Moines claims in all the states of the union put together. Illinois with 15,930 and Nebraska with 15,044 subscribers come next in order, and the remaining subscriptions, about 12,500 in all, are largely concentrated in the neighboring states of the corn belt.

Of all the agricultural papers, The Homestead carries the largest number of live stock advertisements, representing the greatest number of individual breeders. This supremacy is an all-the-year-round matter and there is no exception to it. It is the result of the two commanding factors of circulation and service. The Homestead has by many thousands a larger circulation than any competitor, and it is concentrated in a homogeneous territory, rich in live stock. Its subscribers are of a better class, demanding the most reliable information and service, such as The Homestead gives. Its field men are just such experts as the stockmen of the middle West like to meet. They are in close touch with live stock conditions everywhere. Their work in the sale ring is universally praised. Their visits to the breeders of this vast, rich territory are productive of mutual information and benefit. Their notes from the field are prolific in matters of interest and value to the 100,000 subscribers of The Homestead. Is it strange, under these conditions, that The Homestead is outstripping all rivals in this valuable feature of an agricultural paper?

There are many ways in which it pays the farmer to advertise. He may need help, male or female, which he cannot secure in his own vicinity. He may have lands to sell or may wish to buy improved or unimproved land for some particular purpose. He may want to find a tenant, or, if a tenant himself, may desire to secure a good farm to operate on shares or for cash rent. He may want to buy or sell a vehicle, or a machine, or a musical instrument, or a set of books, or a business of some kind, or a pet bird or animal, or live stock of some character. There is, indeed, hardly any sort of business transaction involving a considerable sum of money which cannot be promoted at times by the use of printer's ink; and

tangular-shaped grain is also a good one, and for that reason it is not always practicable to go beyond a certain point in the matter of increasing the depth of kernel. A kernel that tends to be rectangular in shape is one with strong constitutional powers, and such kernels usually produce strong sprouts.

We indorse the idea expressed here that corn that shells out 85 per cent is better than corn that shells 90 per cent, and that moderately rough corn weighs better than the smoother varieties. The 85 per cent corn means that there is a certain balance maintained between the grain and the cob, and if you expect to keep up the stamina and size of your corn there must be a cob of fair size. Ninety per cent corn tends to get short in the ear and it also tends to get narrow in the kernel, thereby producing grain that is very hard to plant.

It is also true that corn in three years will degenerate, if not rightly handled, more than can be regained in five years. For that reason we think that it is necessary to fix a type in your mind and select closely to it year after year.

advertising in farm papers of large and extensive circulation is the most effective kind of printer's ink. The farmer's world is no longer a narrow one, bound by his physical horizon. The railroad, the steamboat, the telegraph, the telephone and the printing press are broadening all human relations, and we who till the soil are neighbors to all the world, with closer commercial relations to our fellow-craftsmen in other sections of our own country and other countries than ever before.

For the low price of five cents a word you can become an advertiser in the classified department of The Homestead, and your advertisement will be inserted without additional charge in The Farmer and Stockman, a great farm paper with over 56,000 subscribers, mainly in Missouri, Kansas and Oklahoma, and also in The Wisconsin Farmer, a splendid agricultural weekly of Madison, Wis., which has 34,000 subscribers, mainly in Wisconsin, Minnesota and the Dakotas. The three papers combined have 190,000 subscribers, equivalent to 950,000 readers (as every copy of a paper like The Homestead averages at least five readers) and thoroughly cover ten of the best and most productive states of the middle West, where the farmers have plenty of money to buy what you have to sell. As there is considerable expense attendant upon handling the advertisement in these three papers, we have fixed a minimum charge of \$1.20 for any advertisement. In other words, no advertisement is inserted for less than \$1.20, even if less than twenty-four words. Every number, initial letter and abbreviation counts as one word, including your name and address.

In order to insure insertion in any issue, copy should be in our hands on or before Saturday of the preceding week. Our terms on classified advertising are strictly cash with the order to save the expense of bookkeeping. It will pay you to try this low-priced popular advertising.

None of our advertisers are better pleased with their results than those who use The Homestead alone. They thus avoid the losses attendant upon the use of weak mediums, which are always expensive, even when their rates are low. Mrs. J. W. Bloxham, of Grundy Center, Iowa, breeder of White and Silver Laced Wyandottes, writing under date of March 15th, says: "I have always had splendid results from my advertisement in The Homestead and have never found it necessary to advertise in any other."

Mr. Jasper Lacey, of Neoga, Ill., who recently advertised Mammoth Bronze turkeys for sale, writes under date of March 14th: "The advertisement in The Homestead brought us many sales."

Mr. F. L. Morse, of Floyd, Iowa, breed-

er of several varieties of chickens, writes under date of March 13th: "I have had excellent sales from my advertisement in The Homestead this winter and I thank you for the business your paper has brought me."

The Homestead is happy in the belief that many of its 100,000 subscribers give it the first place in their affections. Here is a letter from Mr. W. M. McCoy, of Tabor, Iowa, who takes two other farm papers and several journals of other kinds, but frankly says that he likes The Homestead best of all of them. He is a subscriber for the Red Letter combination. Equally strong preference is expressed by Mr. J. H. Clayton of Booneville, Miss., who is taking forty publications, but declares that none of the thirty-nine others fills the place of The Homestead, to which he accords "a wide niche, distinctly its own."

A Webster City, Iowa, subscriber expresses appreciation of The Homestead's poultry and live stock advertisements, enumerating them among its interesting and valuable features. This brings out a fact which many intelligent people now recognize, namely, that modern advertising is of great real value to the reader, and that a newspaper or magazine which does not have an abundance of advertising appears lifeless and unattractive. Much advertising of these days is designed and written by specialists and embodies valuable information. The illustrations, too, are often good and suggestive. No one who does not read advertisements can keep fully abreast of the times.

Expressing the opinion that The Homestead is the greatest agricultural paper in the United States, Mr. N. O. Biner, of Cook, Neb., orders our Red Letter Combination, which includes The Homestead, the Chicago Weekly Inter Ocean, the Kansas City Weekly Star, The Homemaker and The Farm Gazette, all of which we offer to our subscribers for \$1.25 a year. This great combination is attracting thousands of subscribers, old and new, and everybody is pleased with it. We advise our readers not to forget the Red Letter combination when ordering reading matter for the year.

"The Homestead is all right in every sense of the word," writes Mr. C. A. Wonderly, of Benedict, Neb. "I have taken it so long that I do not feel like doing without it, as I am a farmer, and not a young one, either. I first read 'Farm Furrows,' Agricola's 'Day by Day,' and Henry Hatch's communications, and follow up with the rest as I get time. I have often thought I should like to attend the Iowa State Fair and get a chance to meet those gentlemen." We trust that not only Mr. Wonderly, but thousands of our other old friends will attend the fair this year and meet the members of our editorial staff there.

covered by the disturbance of the soil by frost.

However, it is our experience that just as good results may be obtained by waiting until the land is sufficiently dry on the surface to stand harrowing without puddling. Then sow the grass seed on the surface and harrow two or three times. It will do the wheat no harm, but on the other hand will in every way improve the prospects for a better crop. As a general thing, the soil of a fall sown crop gets rather firm during the winter, being more or less compacted with the rains and snows, so that the surface is left in a somewhat crusted state. The harrow breaks this up and makes of it a mellow, friable seed bed. We have in mind a number of instances where wheat thoroughly harrowed two or three times early in the spring yielded as much as forty-five or even as much as forty-seven bushels per acre, thus demonstrating that sensible harrowing does not injure the crop.

Working all day with wet feet at this time of the year will cause more sickness than can be cured with a barrel of medicine.

A good type is described by Mr. Winship, namely, corn that is seven and a half inches in circumference, ten inches long and bearing about eighteen or twenty rows. Then, if to this is added a certain degree of roughness on the outer end of the kernel you have a vigorous type of corn.

#### SEEDING DOWN WITH WHEAT.

A subscriber at Wapello, Iowa, sends the following communication:

I have twenty acres of winter wheat which I would like to seed down to timothy and clover. Now, would it be better to seed it down this spring or to plow the ground after the crop is removed next July and sow wheat again along with timothy in the fall?

Winter wheat makes an ideal crop with which to seed down to timothy and clover, and in many cases just as good a stand can be obtained by sowing in the spring as in the fall.

Of course there is a right and a wrong way to do the seeding. A good method is to sow the timothy and clover seed just as early in the spring as possible; indeed, many advise sowing before the period of freezing and thawing ceases. If this is done the seed is apt to be

## Farm Furrows

Turned by a Practical Farmer.

A nail in time saves nine.

Too many farmers keep cows. The cows should keep the farmers.

Those who know, say that after a man has taken a few glasses of rye on board he begins to feel his oats.

The best varieties of fruit to grow are those which sell the best, even if they don't just suit your palate.

Sunshine is as necessary to the little pigs now on the farm as a government license is to the blind pig in the village.

Everything may come to him who waits, but the one who hustles will generally bring himself to what he wants in less time.

Fence the barn yard in so you do not have to spend the time you might be resting in running horses and cattle around the neighborhood.

Some of those, I notice, who held the harrow cart up to ridicule last season have experienced a change of heart and now ride in style behind their drag like other thoughtful men do.

Although a man should select and start his seed corn in a way that will make him feel confident that it will grow, without having his feelings in the matter bolstered up by actual test, it is nevertheless quite a source of satisfaction to run a thorough test anyway, and know for certain that it will not be necessary to replant any of the field.

An eastern editor has figured out a scheme by which an income of \$13,000 is realized annually from a ninety-acre farm. He acknowledges that it has never been tried "off" paper.

South Dakota stockmen interested in different breeds are strongly organized in an association with headquarters in Mitchell. An annual directory and report is issued, a fine sale pavilion has been erected and very successful sales have been conducted, all of which speaks well, indeed, for the citizens of that state.

A farmer we know bought several car loads of lumber last summer from the wreckers of the St. Louis Exposition and after building a fine barn and granary, sold enough lumber to pay nearly the whole bill.

Farmers in the southern states plant Spanish peanuts and let their hogs harvest the crop. Wonder why a variety of this nut cannot be secured that will

## It Tells at the Pail

Give the cows what they need and they will give you what you want. No mystery about it. We don't claim to balance the ration, but we do claim to improve digestion by supplying the animal with exactly what the noted medical colleges and authorities claim the animal needs to increase production. No one can doubt that all growth depends upon digestion—we know that only about fifty-five per cent. of the food of a healthy animal is digested. What the average animal digests we don't know—but Dr. Hess Stock Food will make every cow, steer and hog digest the largest possible amount of food and convert it into profit. If we fed a cow or steer for the same purpose we feed ourselves, they perhaps would not need a tonic continuously. But we make it a business to overfeed

the steer, crowding him to an early market, and that's why they should have something to aid digestion.

## DR HESS STOCK FOOD

the medicinal stock tonic and prescription of Dr. Hess (M.D., D.V.S.) is just what the overfed animal needs. It does not supply additional protein to make bone, muscle, etc., but it does make the food of the farm produce the maximum amount of growth and milk production, besides curing and preventing stock diseases.

Professors Quinlan, Winslow, and Finlay Dun, the most noted medical writers of the age, tell us that bitter tonics improve digestion, iron makes blood and the nitrates assist nature in expelling poisonous material from the system. These ingredients make up Dr. Hess Stock Food—isn't this pretty strong proof? But besides this every pound is sold on a written guarantee.

100 lbs. \$5.00 } Except in Canada and  
25 lb. pail \$1.60 } extreme West and South.  
Smaller quantities at a slight advance.

Where Dr. Hess Stock Food differs in particular is the dose—it's small and fed but twice a day, which proves it has the most digestive strength to the pound. Our Government recognizes Dr. Hess Stock Food as a medicinal tonic, and this paper is back of the guarantee.

Free from the 1st to 10th of each month—Dr. Hess (M.D., D.V.S.) will prescribe for your failing animals. You can have his 96 page Veterinary Book free any time for the asking. Mention this paper.

DR. HESS & CLARK, Ashland, Ohio.

Also manufacturers of Dr. Hess Poultry Pan-a-c-a and Instant Louie Killer.

INSTANT LOUIE KILLER KILLS LICE.

grow in the north. I have seen some that did fairly well.

What inconsistent people there are in the world. Did you ever notice that the man who is generally the loudest in his opposition to "book farming" is always the keenest to give his advice on all points about farming?

I notice that the plan of making use of by-products has entered into the fuel industry and in a southern city of the corn belt a product called "coal-ette" is now being made by molding slack and pitch into handy sizes for stove use.

Happiness is largely a matter of habit. The more often a person makes up his mind to gracefully accept the different conditions of his environment the more fixed will become the habit of being joyful. One need not necessarily be satisfied to be happy.

It is the worst kind of carelessness to watch and care for breeding stock up to the time for them to produce off-

## A Refrigerator That Needs No Ice

A refrigerator that keeps meat, milk, cream and butter fresh and cold without the use of ice. A refrigerator that doesn't cost anything to keep cold no matter how hot the weather is, that's the

## Galesburg Iceless Refrigerator

The Galesburg will pay for itself in one season by the eatables you save, to say nothing of the saving on ice.

It costs less than a good sized refrigerator and does not cost a cent to keep cold.

It is made of heavy galvanized iron, cannot get out of order, never wears out, can be operated by a child.

We allow you to try the refrigerator for 30 days absolutely without cost to you. If at the end of that time you do not want it, send it back at our expense. The Galesburg is the greatest invention of the age; learn all about it from our illustrated booklet, it's yours for the asking.

Send for a copy today—it's free.

**GALESBURG CORNICE WORKS**  
10 E. Ferris St., Galesburg, Ill.

spring and then fail to be on hand at the critical period. No man ever built up a very large bank account by such methods. It would be just about as reasonable as to leave the harvest field for a month's vacation.

A good grafting wax may be made of resin, four parts; beeswax, two parts, and tallow, one part, each by weight. Melt all together, then pour in vessel of cold water. When cool enough, work it like taffy until light colored. Interest the boys in top grafting and other forms of plant grafting and they are more likely to do less grafting in other things.

The government formula for a durable exterior whitewash, as well as that made with skim milk, has been found to be a very satisfactory article for small farm buildings and fences where the surface is unplanned or weather-beaten. I have just tried a new recipe which promises to make a durable coat and very cheap. Mix together fresh slacked lime, two gallons, and salt, two pounds. Dilute to a thick cream, and add soft soap liquefied at the rate of one pound to fifteen gallons paint. When applied it does not show much color, but turns white when dry.

### WRITE FOR THE ROOF BOOK.

The Roof Book covers the whole subject of roofs for residences, barns, cribs, poultry houses, outbuildings, stores and factories. You can get a free copy by simply asking for it. With the aid of the illustrated Roof Book, you can lay a waterproof and fire-resisting roof on any kind of a building and be absolutely sure of a handsome, economical and satisfactory job. The Roof Book tells how to make valleys, gutters, etc. Gives directions for making the cuttings and flashings around chimneys, skylights and fire-walls. How to make all joints water tight. How to measure a roof. How to cover old shingle roofs. How to make poultry houses vermin proof. No matter what you want to know about roofs, you'll find it all in the Roof Book. It explains the waterproofing, toughening and flint coating processes that make our famous No-Tar Roofing safe, durable and economical. No-Tar Roofing is cheaper and better than shingles, steel, iron and other roofing material. Keeps any building warm in winter and cool in summer. Unsurpassed for siding, as

## JOIN THE UNITED STATES NAVY

GOOD PAY, with board, lodging, medical attendance free. Every recruit is given a \$45 outfit of clothing. \$5 increase pay for re-enlistment. Opportunity to learn trade. well as roofs of poultry and stock buildings. It is entirely free from coal tar. Non-odorless, vermin proof. If the old shingle roof on your house or barn is leaky, better get the Roof Book and learn how you can cover the old shingles with No-Tar Roofing, at small expense and avoid all roof troubles. In addition to the free Roof Book the Heppes Company will send you free samples of No-Tar Roofing, and tell you ten ways to test it and prove its superiority. Send postal for free Roof Book to the Heppes Company, 2481 Fillmore St., Chicago, and get posted on the roofing question. See advertisement on page 13.

### THE SECRET OF PAINT DURABILITY.

It is impossible for paint to give satisfactory service unless it is made of pure materials, properly mixed to suit the requirements of the work and properly applied. Adulterated paint, no matter how fancy its name or the so-called guarantee that goes with it, is never durable. It is bound to crack, scale and fade. The real secret of durability in paint is the use of pure materials. The Carter White Lead Company, of Chicago, Ill., makers of the famous Carter strictly pure white lead, have just published a very valuable booklet called "Pure Paint." This booklet tells how to distinguish pure paint from adulterated, and how to save money on your paint bill. This is really a valuable book, but it can be secured free of charge, together with six beautiful color schemes, by any of our readers who will write the Carter White Lead Company, Dept. D, and ask for it. This firm have been making strictly pure white lead for more than twenty-five years and are in a position to give reliable advice on anything pertaining to paint. Do not fail to write for the booklet. It will save you money. See advertisement on page 9.

### CHEAP ONE-WAY RATES.

Every Tuesday during March and April, the Minneapolis & St. Louis R. R. will sell cheap one-way excursion tickets to points in Minnesota, North and South Dakota and the Canadian Northwest. Rate is \$14 to most North Dakota points. Buy tickets at 512 Walnut St., or Union Station. For further information write W. K. Adams, Dist. Pass. Agent, Des Moines, Iowa.

A Practical Journal for the Farmer, Stockman, Fruit Grower, Poultryman, Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

**SUBSCRIPTION RATES**—Single subscriptions, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,  
Des Moines, Iowa.

## GOOD EARLY PASTURE FOR HOGS.

There is no inquiry submitted more frequently to the editor of this paper than that relating to the establishment of hog pasture. The situation in thousands of instances in the corn belt is simply this: The meadows and pastures are possibly not fenced hog-tight so that hogs cannot be turned into them, or, it may be that newly seeded-down fields have been killed out so that at the last moment one finds himself obliged to seed down something that will make a growth quickly, so that sows with their pigs may be turned to pasture in good time in the spring.

Mr. F. B. Chapman brings up the subject at this time, and says:

I have no hog pasture and am anxious to start one as early as possible in the spring. What would you think of the plan of sowing oats and clover together and turning the hogs in when the crop is about eight inches high? If this plan were adopted, would I stand any chance of getting a stand of clover after pasturing it all summer? Any plan that you can suggest that will help me out of the dilemma will be keenly appreciated.

The sowing together of clover and oats early in the spring is one of the best solutions for the difficulty for the time being. However, the mixture, unless the growth of clover is exceedingly strong, does not last long, as the oats send up woody stems and soon become unpalatable. Hog pasture, as a rule, is not only needed during May and June, but is needed the whole season, and for that reason it is better to sow a mixture that will remain green longer.

Rape alone or a mixture of rape and clover, if seeded early, generally gives good results. If the hogs are kept off until there is a growth of six or eight inches it is surprising how much pasturing the rape crop will stand.

There is another mixture that has been tried and found to answer the purpose fairly satisfactorily under certain conditions. We refer to the practice of sowing fall rye in the spring along with rape. By sowing six pecks of rye and five pounds of rape seed per

## A Budget of Real Letters

Here's a "Budget" of real letters written by farmers and stock-raisers in their own language and handwriting.

If you enjoy reading the actual experiences of your fellow farmers telling how they have battled and conquered scab in sheep.

How they have stopped disease among their hogs when they were dying off at a rapid rate; how they have rid their stock from ticks, lice, fleas, mange and eczema.

How they prevent these scourges gaining further foothold—this "Budget" will particularly interest you.

You will get a lot of valuable information that may be the means of saving you hundreds of dollars.

These letters were sent to us by farmers who have used Dipolene—that great germ destroyer, preventive and cure of all farm stock diseases.

They are actual, positive evidence that there's nothing you can get which will prove as good, safe and sure a means of keeping disease off your farm as Dipolene.

Dipolene is a pure coal tar preparation that is perfectly harmless—non-poisonous. It promptly cures scab, mange, eczema, etc., kills lice, ticks, fleas, and when sprinkled around barns, sheds, pens, in troughs, etc., is a positive preventive of all stock diseases.

As a dip it is effective and economical. One gallon makes 100 gallons of strong solution. Will not discolor or injure wool or feathers and is beneficial to skin.

## DIPOLENE THE ONE MINUTE STOCK DIP

Is a remedy every farmer should have on hand and use occasionally. It's the best insurance against loss from disease you can get.

Let us send you this "Budget of Real Letters" to prove our claims. They are better arguments than ours—they are actual facts.

## FROM FARMERS

Telling Their Experiences with DIPOLENE In Their Own Handwriting.

acre a very satisfactory mixture of green food will result. The rye instead of shooting up like oats and barley and heading out, will grow more or less incumbent in its nature and largely produce leaves. In some cases it will remain green all summer, or at least through June, July and August. If it is not too severely pastured the rape comes on and will furnish excellent fall feed.

We have in mind a case where a five-acre pasture of this kind last year furnished practically all the pasture needed for 125 hogs from the first of June until winter. Of course these hogs were fed grain every day, but most of the time was spent on this mixture.

## A GOOD WAY TO SEED ALFALFA.

The following communication has been received from a subscriber, Mr. Paul F. Werner, of Doniphan county, Kan.:

In a recent issue of your paper one of your subscribers from Doniphan county, Kansas, gave his experience with alfalfa, so I thought I would express a few thoughts on the same subject. I have had excellent results from plowing land early in the spring and keeping it in a good state of cultivation until about the first of August. Alfalfa of all crops must be seeded on a well-prepared soil or it will not flourish. The cultivation destroys weeds in addition to bringing the soil into a fine state of tilth. If you sow the alfalfa in the spring you will find it necessary to cut the weeds back with the mower two or three times and, all things considered, I think it is much better to destroy the weeds with cultivation and therefore give the crop every possible chance after it is seeded. Of course it requires considerable labor and your soil is producing nothing part of one year, nevertheless I think alfalfa is a crop that will pay well for taking this time with the preparation of the seed bed.

The plan here suggested works exceedingly well in many cases. It corresponds somewhat closely to the plan of summer fallowing land for winter wheat.

In many cases where oat, wheat or barley stubble is plowed in July or August, in order to prepare the soil for alfalfa, the land becomes so dried out that there is not enough moisture to germinate the seed. It is not uncommon to have the seed remain in the ground several weeks in the fall before it germinates, and when this is the case the crop hardly ever makes out enough to go through the winter satisfactorily.

Up to the present time the matter of obtaining a stand of alfalfa is by no means an exact science, and we are not

sure but what the plan here suggested comes as near being a scientific plan as any other method that has been advocated.

## RENTING ON THE SHARE BASIS.

The following communication has been received from an Oklahoma subscriber:

I have a 240-acre farm fenced hog tight. There are on it three hogs sheds fifty feet long, windmill pipe lines, two houses and good improvements generally. Now, if I should rent it on the basis of the renter furnishing half the tools, half the work stock, half the seed, half the cows and half the hogs, what proportion of the increase and produce should go to the renter and what part of it should be mine?

Something depends on the value of the land per acre. We know of many instances where land is rented on this basis and each, that is, both renter and landlord, receives half of the increase. For instance, in the case of the cows, the renter, of course, does the feeding and uses feeding stuffs that are grown on the farm but the returns from the milk and butter are divided equally. The same would be true as applied to the hogs. If a thousand dollars' worth of hogs are marketed before the lease expires the landlord receives \$500 as his share, and the renter \$500.

As a rule, it is the custom for the renter to furnish all the work horses, but there is no reason why the arrangement mentioned here could not be carried out; that is, each to furnish half the work horses.

It sometimes happens that very desirable tenants are available who do not have the necessary capital to invest in half the stock, and in that case the plan followed necessitates that the renter pay interest on half the valuation of all live stock that is left on the farm.

## FERTILITY IN CLEARED TIMBER LAND.

The question of fertility in cleared timber lands has been brought up in the following communication:

How do you account for the richness of cleared lands when timber has been removing fertility from such land for fifty years? It seems to me that if a forest does not reduce the amount of plant food in the soil a crop of corn should not either. Does not the fact that cleared lands are rich indicate that plant food comes largely from air and water.

It appears that this writer has fallen into a very common error. With a few facts and a little more reasoning it is easy to show the fallacy of the writer's argument. Now the statement about the forest removing fertility is contradictory. The growing trees have not removed an ounce of fertility, not even enough to grow a leaf, unless the trees have been removed as fire wood or lumber. Year after year the leaves fall to the earth, returning a large part of the plant food used. The roots have drawn on sources of plant food deep in the soil, bringing to the surface indirectly through the leaves mineral plant food that the average crop would never reach. In thirty or fifty years, as the life of the tree may be, the very essence of the fertility in the soil for many feet below the surface has been gathered and deposited on the crust in the form of leaf mold. In this form it is easily available by plants when incorporated in the seed bed. The log that is eventually removed represents but a very small part of the plant food secured by the roots.

The plant food taken from the soil by a crop of corn or other plant is a different question. The grain is always removed and frequently the whole plant. Practically nothing remains except the

## BALING SENSE

Why You Should Buy An

## Ohio Press

One great big, plain reason is that it is an all-steel, one-horse press that does as much work and as good work as any two-horse press you ever saw. Full circle, three strokes to the round and the horse has twice the leverage of ordinary presses and no bridge to stumble over. Ready for work as you see it, no dismounting. Works on hillside or level. Makes 70-lb. bales compact and smooth. Write for catalog showing field work. You'll want one when you know all about it. OHIO Power and two-horse self-feed presses can't be beat.

THE OHIO CULTIVATOR CO.,  
Dept. 13, Bellevue, Ohio.

**UNIFORM DEPTH AND A Uniform Drop**

A New Edge Drop "The Perfection"

## An Active Retired Farmer.

Who wants to keep his mind occupied is offered a nice position in his county. The pioneers of this country knew the value of Ginseng Roots as a tonic for stomach, liver and kidneys. To middle-aged men and women Ginseng Tonic gives new life and energy. There is demand for it everywhere. Write us at once for a county manager's position. Ginseng Tonic Co., 4552 Forestville Ave., Chicago, Ill.

roots. There would certainly be no comparison of the amount of plant food removed in this way for thirty or more years with that removed by the tree.

Chemical analysis of the soil show that it supplies a large part of the plant food required that cannot be obtained from any other source. In the growing plant carbon, from which the woody tissues are largely formed, is taken directly from the air by the leaves. Nitrogen from the atmosphere must first be fixed in the soil by legumes before it can be appropriated by the plant. Water is the medium for transporting plant food.

The Homestead and The Homemaker, \$1.25 per year.

## How Much Paint to the Can?

UNCLE Sam sets the Standard Measure for a gallon at 231 inches. The "HIGH STANDARD" PAINT can has 231 inches inside. Every time you buy a "HIGH STANDARD" gallon can, you get a gallon of paint. Every time you buy a 28-inch-inside can, you get short measure—even though it is filled to the brim.

Every size can of "HIGH STANDARD" is full U. S. Government Standard Measure of paint—not capacity only. So when you are offered paint a trifle "cheaper" than Lowe Brothers, see if the quantity is there.

But paint quality is the real consideration, after all. That is where the real economy comes in—satisfaction and service.

## Lowe Brothers "High Standard" Liquid Paint Gives Best Results

in spreading and covering, working and wearing—a difference of 30 to 50 per cent. over "cheap" paint which quickly proves its costliness.

"HIGH STANDARD" PAINT is made of the materials which a third-of-a-century of practical and scientific paint-making has proven to be best; mixed and milled, ground and reground, by powerful machinery to an indescribable fineness and a perfect union of solids and liquids. "HIGH STANDARD" PAINT is sealed in air-tight cans—which keep it always fresh and good—and marked with "The Little Blue Flag"—Your Protection.

There is a Lowe Brothers Paint for every use and a Lowe Brothers dealer in nearly every town. Write us for nearest dealer's name and our practical booklet, "Paint and Painting." Mailed Free.

# POTATO GROWING,

BY JOHN B. IRWIN, MINNESOTA.

The potato business, as it is carried on today, has been varied to adopt itself to the conditions of the different localities. But the most advantageous way of planting and growing and harvesting the crop is now practically the same in all sections, and the same methods can be used with early as with late potatoes.

Near the city of Minneapolis we find it much to our advantage to raise early potatoes on sand loam and late potatoes on the heavy clay. With good management we can usually have early potatoes in the market 80 to 90 days from time of planting, and yielding from 75 to 200 bushels to the acre. If the season is early we find little difference between fall and spring plowing on heavy or light sand, but fall plowing is the safest, as it is firmer. We use a hand cutter which by a lever forces the potato between knives so placed as rarely to miss one or two eyes on a piece and a good man or boy will cut 50 bushels per day.

For planting we use the machinery which drops one row, making ditch and covering as it goes. We leave the ridge left by the planter over the potato row, as that gives a chance for the sun to better the soil, and, furthermore, when we harrow crosswise, to the rows, it takes down these ridges leaving the ground in and near the rows absolutely free from growth of weed or weed seed to germinate, as about two and a half to three inches of the ridge is taken off.

By cultivating quite deep and close to

the row the first time, all of the ground not worked up by the planter is loosened which is especially desirable on fall plowing.

Then a weeder is very nice to smooth down the surface and leave a dust mulch after rains to conserve a moisture. Our paris green sprayer covers four rows at once and requires a boy or man and one horse. We hill the potatoes a little the last time we cultivate and after we go through and dig them with horse digger the ground is ready and level, ready for a crop of corn fodder or fall silage for cattle.

For ten years we have planted from the 10th to the 15th of April, and before we plant oats, and though we always have frost after that, and once on the 30th day of May our potatoes, four to six inches high, were frozen down, they came on and did well. Though they do not get above the surface for a month after the planting even at that early time, the difference will be easily noticed in the maturity of the crop.

The Early Ohio is the standard variety with us and if we choose they will remain in the ground to be dug in the fall with little injury unless from grubbing or excessive rains rotting them in low places.

There are other varieties that may be as good or better, but the Early Ohio seems to be a standard in most markets and we want the best shipping as well as local prices at our command.

## TREATING POTATOES FOR SCAB.

The following communication has been received from a subscriber, Mr. L. V. Hall:

I wish you would give me some directions for treating potatoes for scab. Planting time is near at hand and I find that my potatoes are slightly scabby. I understand they will be all right for seed providing they are run through some kind of a dip.

Possibly one of the simplest scab remedies is to use formalin and water in the proportion of one pound of the former to thirty gallons of the latter. Formalin is a liquid which, from a chemical standpoint, is 40 per cent formaldehyde and may be obtained from any druggist. It is a powerful disinfectant, though when it is diluted with water it is not a poison. Of course, it must be handled with care in its pure state, as it is very strong.

The best way to treat potatoes is to take the mixture of formalin and water in the proportions named and place in a tank, hoghead or barrel, then immerse sacks containing the potatoes and leave them to soak for a period of two hours. If the potatoes are placed in a gunny sack the mixture will freely penetrate and thoroughly operate on the scab.

After leaving the potatoes in the liquid two hours, scatter them on the ground or on the floor so that they will be rapidly dried.

While under ordinary circumstances the treatment named above will insure a crop that to a large extent is free from scabbiness, at the same time we do not think it is a good policy to use potatoes for seed that are very scabby. In the first place, when this disease goes beyond a certain point it affects the "eye" or germinating part of the potato so that one is apt to fail in getting a good stand of potatoes. However, if the surface of the potatoes are only slightly affected and it is not practicable to find clean seed, it is by all means advisable to take the time to run them through the formalin treatment.

## Special Purpose Tools.

No more valuable work relating to the farm and garden has been issued than the book, "Tools and Their Uses," the front cover page of which is reproduced on the first page of this paper. The American Fork & Hoe Company, 1335 American Trust Bldg., Cleveland, Ohio, is sending it free to readers of The Homestead on their request.

"Tools and Their Uses" deals with a subject of growing importance to all tillers of the soil, and one which has never before been so fully handled—that is, hand tools, hoes, forks, rakes, weeders, cultivators, etc., and particularly the new special-purpose hand tools brought into use by the constantly widening ex-

tent of intensive agriculture and the cultivation of new kinds of crops.

Besides the many requirements for farm and garden hand tools, the desire and oftener the necessity of saving time and labor in this day of large production, high wages and scarcity of help, have led to the invention of a tool for every kind of work, thus adding to the number of special-purpose tools now in demand.

It is certain that nothing can replace hand tools; nothing else will do the careful work and put on the finishing touches which count so much and produce the dollars of profit.

The book, "Tools and Their Uses," goes interestingly into the methods of making the famous True Temper line of farm and garden hand tools. It is free from technicalities and is fully illustrated. The making of a representative tool is described and pictured, stage by stage, from the raw material to completion. The book abounds in illustrations and explanations of the uses and possibilities of tools.

It is pointed out that in the manufacturing of True Temper tools, the principles of mechanics are closely studied to give every part just the exact degree of strength required, and the precise shape necessary to enable the farmer to work perfectly with them.

The relative weight of the two ends of each tool is evenly distributed; the leverage and the fulcrum points are mathematically adjusted; the bends, dips and gathering sweep are formed with studied accuracy.

That is why they "hang" so perfectly. The right hang is something you cannot see or well define, but you can feel it, and you know it the instant you get a well-made tool into your hands.

Every True Temper tool also has its weight and strength adjusted and equalized according to the purpose of that particular tool. The waste of strength and the loss in dollars and cents in using clumsy tools, or tools not suited to the work, are figured out with this observation:

It takes more time and muscle to do poor work with a poor tool than it does to do good work with a good tool—A True Temper tool.

Unsuitable tools are to be avoided, just as you would avoid poorly-made tools. Your wife's scissors will cut wool, but you don't shear sheep with them.

You could cut wheat with a mower, but you would not think of doing it that way. The old-fashioned spade is cast aside for the modern spading fork.

You don't pitch hay with a manure fork. You would waste time and effort if you did.

There is fully as much to be gained by using the proper tool for each and every kind of field and garden work.

The gardener cannot succeed if he attempts to cultivate his plants with hoes built for the cotton or tobacco industries.

The cotton planter cannot afford to waste

**KEEP THE HORSES' NECKS SOUND AND WELL**

by using Lankford Collars. They are humane, light, firm and lasting. They never cause galls, sore necks or should ders. They mean that you can work a horse every day in the year. Guaranteed. Fits any shaped neck. \$1.00. Circular and book free. Address

**THE POWERS MFG. CO.**  
1405ycamore St., Waterloo, Ia.

time and effort by attempting to use garden hoes to work his cotton crop.

Where is the farmer who would use an old-fashioned scoop, after he had once seen and used the scoop fork for handling corn, potatoes, onions, beets, turnips and all kinds of vegetables, without bruising or injuring them?

A chapter is given each class of tools. The farm scenes, reproduced from photographs, would make the book worth preserving.

Altogether it is a noteworthy addition to the farmer's library. None should be without "Tools and Their Uses," and none need be, since a postal card will bring a copy, if addressed to the American Fork & Hoe Co., 1335 American Trust Bldg., Cleveland, Ohio.

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 100,000, reaching a farm population of at least 550,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## PLYMOUTH ROCKS.

EGGS for hatching, Barred Plymouth Rocks exclusively. Guaranteed fresh, fertile and true to name, 25 years experience, matings better than ever this season, satisfaction guaranteed, prices low, circular free. H. M. Jones Co., Graceland Farm, Berwick, Iowa. Shipping point Des Moines, all express companies.

FOSTER'S Barred Rocks cleans the platter at Southern Iowa Poultry Show. If you want to win buy eggs from stock scoring to 93. One dollar per sitting, five dollars per hundred. Write for circular. Albert Foster, Russell, Iowa.

THE QUALITY of my White Plymouth Rocks will produce prize winners. My poorest mating is headed with a \$25 male bird direct from Fisher. Eggs from my yards are 15, \$3.00; 30, \$5.00. It. C. Shetler, Van Wert, Iowa.

BARRED Plymouth Rock eggs. Also a few extra cockerels left. Finest flock of large, big bodied, blocky, high scoring, 200 egg per year producing hens. Low prices. Write me. Mrs. A. A. Berry, Box 26, Clarinda, Iowa.

STANDARD BRED Barred Plymouth Rocks exclusively. No better bred birds than ours. Eggs, \$1.50 per 15; \$2.75 per 30. Write us if you want good ones; we have them. A. W. Nickols, Box 637, Indianapolis, Iowa.

EGGS FOR HATCHING from Barred Plymouth Rocks, Bright and Latham strains. None better for utility and fancy points. Price \$1.00 per 15; \$5.00 per 100. Eggs guaranteed fertile. J. C. Watts, Berwick, Ia.

BARRED Plymouth Rocks. Chicago and New York winners. Heavy laying strain. Eggs only \$2.00 per 15. Ten chicks guaranteed. Circulars. Sherwood Clock, Hampton, Iowa.

KENNEDY'S Barred Rocks. Eggs for hatching, \$1.00 per sitting; \$4.00 per hundred. From extra good layers. No culls shipped. Write J. S. Kennedy, Blocton, Iowa.

BARRED Plymouth Rocks exclusively. Large bodied, good layers; 15 eggs, 75c; 30 eggs, \$1.25; 100, \$3.50. Satisfaction guaranteed. Mrs. G. W. Saunders, Marceline, Mo.

BARRED PLYMOUTH ROCK eggs, four best American strains, \$2.00 per 15. White Wyandottes, White Quill strain, \$1.00 per 15. J. M. Knowles, Stockport, Iowa.

BARRED Plymouth Rocks exclusively. Twelve years a breeder. Eggs, 15, \$1.00; 30, \$1.75. Large deep bodied birds, good layers. D. E. Donahay, Newton, Iowa.

EGGS from White Plymouth Rocks, pure white, standard bred, 75c per 15, \$3.50 per 100. Pekin ducks, 60c per doz. Mrs. John Holmgren, Elmore City, Ia.

BARRED ROCKS—Eggs for hatching. Ideal strain, 15 for \$1.00; 30 for \$1.75. Satisfaction guaranteed. Mrs. Lizzie Lemke, Merrill, Iowa.

EGGS—Pure bred Barred Rocks, guaranteed fresh and fertile. 75c per 15; \$1.25 per 30; \$3.50 per 100. S. A. Linn, Independence, Iowa.

WHITE Plymouth Rock eggs for hatching from fine, large bodied birds of Fisher strain, 15 for \$1.00; 100 \$5.00. C. J. Rose, Ogden, Iowa.

PURE BARRED ROCK EGGS, farm range, 75c per 15; \$1.00 per 100. Larger lots cheaper. Mrs. K. Gilt, Route 2, Merrill, Iowa.

WHITE ROCKS, Fishel strain, high scoring farm range; 15 eggs, \$1.00; 30, \$1.75; 100, \$4.00. D. W. Crouch, Ogden, Iowa.

BUFF PLYMOUTH ROCK eggs, \$1.00 for 15. Pekin duck eggs, \$1.00 for 12. Mrs. J. W. Martin, Mason City, Illinois.

ROCKS—The barred, the kind. We got 'em. Eggs \$1 for 15. John Crowder, Panama, Iowa.

BARRED ROCK EGGS, 25, \$1.00; 100, \$3.00. Mrs. C. H. Medbury, Wadena, Iowa.

## LEGHORNS.

PURE ROSE COMB BROWN LEGHORNS. Eggs, 15, \$1.00. Rates on fifty or more. Baby chicks 15c a piece. My mite remedy free to every purchaser. Cheap as dirt. Mrs. Ida Standiford, Reading, Kan. "Up-To-Date" Farm.

BROWN LEGHORNS, Single or Rose Comb, eggs; also a few Rose Comb cockerels left. Finest flock of heavy layers, excellent 225 eggs per year. High scoring. Prices low. Mrs. A. A. Berry, Box 26, Clarinda, Iowa.

ROSE Comb Brown Leghorns a specialty for twenty-six years. Fifteen eggs one dollar; fifty, three dollars; one hundred, five dollars. Hazel Dell Poultry Farm, Chas. Lyman, Clarinda, Iowa.

LEGHORNS, Single Comb White, exclusively. Eggs for hatching, breeding and prices right. Write for descriptive circular. I guarantee satisfaction. H. M. Humphrey, Lake City, Iowa.

ROSE COMB BROWN LEGHORNS exclusively. Twenty eggs, one dollar; one hundred four dollars. Strong, healthy and extra good layers. C. E. Lister, Iowa City, Iowa.

EGGS—Single Comb Brown Leghorns, direct descendants of Madison Square, New York prize winners. 25, \$1.50; 100, \$4.00; 200, \$7.00. O. T. Calvert, Rock Falls, Iowa.

ROSE Comb Brown Leghorns exclusively. Eggs for hatching, single sitting of 15, \$1.25; two or more sittings, \$1.00 each; \$5.00 per 100. T. A. Davenport, Belmont, Iowa.

S. C. B. LEGHORNS are the kind that lay. Eggs from prize winning stock, \$1 for 15, \$5 per 100. Mrs. Rosa Gardner, 1103 Walnut St., Osage, Iowa.

ROSE COMB Brown Leghorns, exclusively. Vigorous farm raised stock. Eggs, 15, 75c; 30, \$1.00. E. B. Shinn, Route 3, Brighton, Iowa.

S. C. W. LEGHORNS, Exclusively, standard bred. Choice select eggs, 15, 75c; 30, \$1.00 per hundred. Geo. Gaul, Tipton, Iowa.

ROSE AND SINGLE COMB Brown Leghorn eggs. Prize winners in pens. Mrs. Clyde Nelson, Birmingham, Iowa.

## TURKEYS.

MAMMOTH White Holland turkey eggs and toms, Single and Rose Comb White Leghorn eggs. Circular free. Mary Culver, Route 1, King City, Mo.

EGGS—White Holland turkeys, from selected young stock; plenty of size. 11 for \$2.75; 22 for \$5.00. J. H. Shirky, Norborne, Mo.

## RHODE ISLAND REDS.

PEDIGREED Scotch Collies for sale at reasonable prices. John Fagan, Cumming, Iowa.

## DAY BY DAY

Agricola

Queer isn't it, or is it? When you hear your preacher quote Hicks or any other long range weather prophet approvingly, you at once put a bargain counter value upon his scriptural expositions.

One thing is to Agricola a constant enigma: The more stupid the pig the keener his eye for a hole in the fence.

I lately heard an amateur phrenologist say that you can estimate a man's brain power by looking at his head. Well, if he is a farmer it is not necessary to even see his head. Just look at his fields and his stock. A farm is an enlarged picture—more than a picture—an exposition of the farmer.

A certain spunky woman in one of her daring heart to heart talks epitomizes the above thus: "I can judge of a farmer's brain power by the kind of bull he keeps."

Burn up the rubbish of the farm and dooryard, and in the meantime burn last year's blunders out of your mental area. Hold fast only to the good. Grit is good; gumption is better.

Good intentions too often flatter us.

They are promising now, but they do not always count up well at corn husking time.

As to the anti-child-labor crusade: Neglecting to teach the child to work is neglecting that part of its education which makes the other part valuable.

The well-bred man does not quarrel with his neighbor about the color of the hair of his horse, his wife, his cow, his pig, his baby, or anything that is his neighbors' except his religion. Sometime he may not quarrel about that, realizing that the ten thousand different shades and hues of religious color are merely different expressions of the white light of divine love.

Increased popularity enlarges a man's chances to make a donkey of himself. Moses lost nothing in the end by retiring for forty years in the wilderness.

It is the small shredder that is the most dangerous. This is a regrettable fact, for the time seems to be coming when the farmer must do most of his own work, and he needs to do it with his own machinery and manufacture what he grows into the final form in which he feeds it.

The large shredder has self feed tables. The small shredder has to be fed by hand and the aperture gets clogged of-

ten and the temptation to push the stalks between the small snapping rolls is very strong. Safety levers will stop the rolls from drawing the hand in further, if you can reach them, but too much has already been done before there is need to use the safety lever.

The way for a woman to get up-to-date machinery is to convince her husband that her time is valuable.

Seneca lived as long ago as the birth of Christianity and some of his original aphorisms are good yet. Here is one: Human happiness is lodged in the soul, not in the flesh.

Does it pay to raise trees for fuel? Probably. But if we "come to a full stop" after the word "trees" the answer is an emphatic yes. It does pay to raise trees.

The disk plow has few friends in this locality, but the few it has are sanguine. It is not recommended by even its friends for plowing sod, but for sticky, gumbo soil, and also for dry hard soil it is more than the peer of the mold board plow.

It does really look as if the reason why the fanning mill is not better appreciated is because it is cheap in price. If its cost were \$500 every farmer would

want one. And when he had one, he would use it.

This is not a syllogism, but it is nearly as conclusive: Dark, musty corners are the nurseries of disease germs. Sunshine is Nature's germicide. Roll up the window curtains.

Veterans at the Leavenworth, Kan., Soldiers' Home, recently ate poisoned hash and several hundred were taken to the hospital.

## THE ROOF OF A BUILDING

determines more largely the life of the building than any other part of its construction. All know it is necessary to have a good foundation, good structure and then a good roof. The best kind of foundation and structure will soon give way to the elements of time and weather unless they are protected. The foundation is never built with the intention of being fully exposed to the weather. Its qualities are of a supporting nature and not of a protective nature, which latter quality belongs to that of the roof. A building is no better than its roof. Some builders make the mistake of thinking that because the construction of a building is poor, a good roof need not be built. We believe this is a mistake. The weaker the building, the more necessary it is to have a good roof which will protect the weak parts of its makeup. Ruherold roofing is made to stand the test of time, which means that it must be weather proof and fire resisting. It contains no tar or paper and will not rot, crack, tear or melt. Write for prices and samples to the Standard Paint Company, to their general office at 100 William St., New York, or their branch offices as given in the advertisement on page 5. Mention The Homestead when writing.

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 950,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## REAL ESTATE.

300,000 ACRES rich farm lands for sale in tracts to suit purchaser in the Great Fertile Northwest Texas. Price \$5.00 to \$20.00 per acre, terms 1/3 cash, balance ten years' time at 6%. ## ANGORA GOATS.

WELL BRED Angora goats in pairs or any number to suit. W. L. Dale, Bassett, Neb.

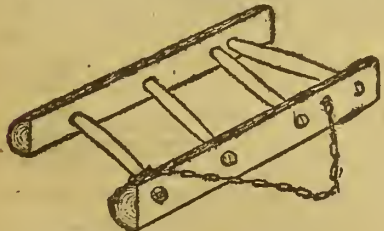

REGISTERED Angora bucks. Elmer Culver, Route 1, King City, Mo.

## ABOUT THE ROAD DRAG.

Interest in the road drag is being manifested more strongly than ever, judging from the number of inquiries received. One of these reads as follows:

As I have become much interested in working roads with the road drag I would like to have you kindly print full description of one and directions for use. A neighbor near by has kept a model road with nothing but an old log drag.

The first advice that we would offer anyone about to make his first road drag is to make it as simple an affair

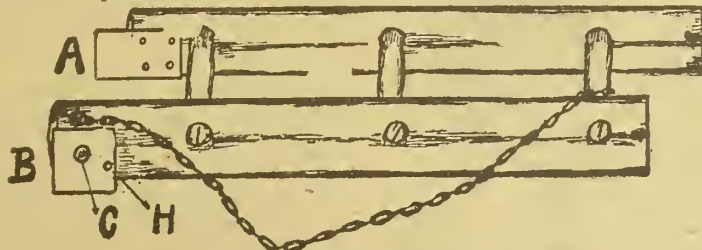

THE SPLIT LOG DRAG.

as possible. There is no need of buying expensive lumber if you have a good, straight log or railroad tie on the place. Neither is there any need of having steel shoes and other attachments made to start with.

If a log is used it should not be too heavy and its length may vary from seven to nine feet, though eight feet is a good measurement. The halves are secured in position by cross pieces of tough timber, as shown, and the faces of the halves are commonly two and a half feet apart. Remember that the halves are not directly one behind the other, as they are sometimes placed by mistake. When you have tried a drag for a season, made according to the first illustration, then you are in a position to make improvements.

A great many people use the drag in the way of a grader, in which case the surface of the road may be dry. To secure the result originally intended by the road drag, the work should be done soon after a rain, when the surface is wet and can be molded into shape rather than graded. Use a slow team, drive

up one side of the ruts and down on the other side. This will not only smooth the surface, but pack it also. Continue

THE DRAG AS A GRADER.

to do this whenever needed and you will notice an improvement in the road each year.

Our second illustration is the idea of the Hon. C. C. Dye, of Decatur county, Iowa. This kind of a drag is to be used on roads where there is more or less erosion and it is necessary to widen the driven road by cutting in the bank alongside and fill in the center of the road. It is made according to the following directions: To any ordinary drag made of a split log or sawed timber, bolt on a piece of sheet steel shaped from a plow share or lay, as shown by letter (a). The piece should extend out from the end of the log about six inches and is about six inches from top to bottom. When it is desired to cut into the road bank, the team is hitched nearer to the shod end of the drag than usual and this throws the projecting edge of (a) into the bank. The attachment (b) is intended to cut a deeper gutter on the side of a flat road. It is made from the same material as (a) and is permanently bolted onto the log at (c), extending below the lower edge about two inches. The bolt (h) may hold the plate in either one of two positions. When not desired to use the plate it may be put out of commission by removing (h), turning the plate on the pivot (c) and rebolting in the new position with (h) through a hole made for that purpose. In this position the edge of the plate facing (b) in the present position will be even and parallel

with the lower edge of the face of the log. When the lower edge of the logs have become worn off, a steel or iron

shoe may be put on, but it should not cover much more of the edge than the forward half.

## The Week in Kansas.

This has been the most remarkable week of weather ever experienced in Kansas, in the month of March. It has been double-distilled essence of spring and summer weather. As a result of it, trees are fast coming out in leaf, pastures are green, the wheat is waving in the wind, while the flowers on all fruit trees and on the flowering shrubs along the creeks fill the air with their sweetest perfume.

Had we been told that spring was going to come to Kansas all in a week, we would not have believed it ten days ago. As soon as two weeks ago we were planning on this not being a very early spring, as it did not seem possible, but wonders have been performed by the last nine days of weather. Oats sown on this farm one Saturday were making the drill rows green the next Saturday, and now the field is green, twelve days after the seed was sown. At some time during every day the thermometer registered better than eighty, and the nights were very warm. With this for temperature, and the soil in the prime of condition, everything just had to grow. It was unable to help it. It was forced to do some rapid growing.

The wind has been in the southwest

every day for ten days, some of the time blowing what the daily newspapers refer to as a gale. This evening it has shifted to the northern quarter, for the first time in two weeks, to stay there for any length of time. The southwest wind has simply brought the temperature of the far Southwest along with it, and now we are hoping the north wind will not bring us, in a like manner, the coolness of the North. A freeze now would do damage, and we must not allow it within the borders of the state. If there is danger of its coming, we must get up a heat in some way, to counteract it.

The daily papers have been filled with "green bug" stories for several days. The latest reports have it that the "green bug" has been blown "from the devastated wheat fields of the Southwest," into the wheat belt of Kansas. A report from Salina tells of the pest being seen in fields there. Inasmuch as the interest in the Thaw trial was lagging, the daily press probably felt that something to liven matters up was needed. The "green bug" has done it.

There are clouds this evening. They may mean rain. A shower would do no hurt, but we need no more. Long days are now utilized by field work, and we're getting along so well that we would very much dislike to be hindered by unnecessary wet weather. Henry Hatch.

Coffey Co., Kan., March 27, 1907.

## ALL THE STOCK LIKE IT.

All the stock like a good stock food, especially at this season of the year when fodder is getting stale and a whiff of the green pastures comes floating to the herds and flocks confined in the yards. This is the result of artificial conditions which are imposed upon stock by present methods. In the wild state, animals are able to secure necessary spring tonics by eating bark, roots and other things of similar nature. Not so with the stock that is dependent on food which man supplies them—they must take what is given. If the food is not adapted to their needs, they suffer. The Prussian Stock Food Tonic is a tonic suited to the needs of stock when conditions of an artificial nature make the system torpid. Write today for the stock raisers' manual to the Prussian Remedy Company, St. Paul, Minn. Kindly mention The Homestead when writing. See page 19.

## OUR DAIRY DEPARTMENT.

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

## The Dairy Barn.

To the Editor of The Homestead:

In building a dairy barn, care should be taken to have a gentle slope from the barn in at least one direction, affording good natural drainage for both barn and yard. If the barn is already built and poorly located, draining and grading will do much to remedy the evil. In most cases it would take but a small amount of labor with plow and scraper when the ground is in suitable condition to handle, to give the surface of the yard a slope from the barn sufficient to carry off the surface water. Even if dirt has to be hauled in from outside the yard to accomplish this, it will not be expensive.

The dairyman needs a warm, well-lighted and well-ventilated barn to shelter his cows. The size depends upon the number of cows that are to be kept or capacity of farm.

I prefer a basement barn or rather a barn built on a hillside, with the side of the barn up against the hill or some way that leads to a second story. This gives ventilation and doorways on the ends and side of barn. The basement is best made of stone or brick, but if this is deemed too expensive a wall under the one side that stands next the hill will be sufficient and the other three sides may be of frame, or cement walls may be constructed in many instances cheaper than rock or brick, as a handy man can build a cement wall himself and the only cash out will be for the material used. The stable for dairy cows should be well lighted and ventilated. It should have tight walls and ceiling and a sound floor. Dairy cows, when crowded into dark and dirty stables, cannot be expected to produce as much milk, nor milk with as wholesome properties as those provided with clean, airy quarters where the sunlight enters through numerous windows and where the foul air of the stable is replaced by pure air without subjecting the cows to injurious drafts. Tight walls and ceilings prevent excessive loss of heat in cold weather, and thus contribute to the comfort of both cow and milker. When on full feed, the dairy cow is

hard worked and less able to withstand extremes of weather than is other stock, for her energies are then being exerted in the direction of production rather than self-preservation. It is not only more humane, but more profitable to keep her warm by making the stable comfortable, instead of compelling her to use large amounts of expensive food in maintaining her body temperature. In the dairy barn no one thing is of more importance than a sound, impervious floor. The benefits derived from such a floor when properly constructed are, the animals are more comfortable and, hence, more profitable. The manure may be saved and applied to the land without loss. Stables are cleaned with less effort. Cleaner milk is produced, which commands a higher price.

One of the great leaks on the farm is the constant loss of fertility occasioned by the wasting of manure. When the liquid as well as the solid manure finds a ready escape through cracks and knot holes, with no means of regaining it, the possible profits of the farm are greatly reduced. Within the past few years the use of cement and concrete in making an impervious floor for dairy cattle has become quite general. In fact, the cement floor is looked upon by dairymen in the more progressive regions as essential. Its first cost is somewhat greater than that of a wooden floor, but when its durability and convenience are considered it is by far the cheaper. The fact that it is permanent adds greatly to the importance of its introduction and use in all dairy regions where so many cows are kept and the conservation of manures is such a vital problem. In cold weather cattle on cement floors must be well bedded, else there may be injury done the udder by coming in contact with the cold cement. It is advisable to haul the manure directly to the field from the barn, but if this is not feasible it should be removed at least 200 feet from the barn. In no case should it be allowed to accumulate against or near the dairy barn and no swine pen should be nearer than 200 feet, on account of the odors being readily absorbed by milk. It helps one a great deal in arranging stanchions, stalls, etc., to visit some good dairy farm and see how others have done the work and what little conveniences experience has developed. Many of these things are advertised in the papers, and circulars may be obtained for the asking that will help to solve some of the

## The Empire proves its claims

CLAIMS are words, proofs are facts.

Mere claims have often sold goods. Proofs are a record of dollars made.

You, or any one else, don't want the cream separator that *claims* the most. You want dollars from your handling of milk.

Therefore you want the *proved* separator, the dollar-making

## Frictionless Empire Cream Separator

Here are some *facts* that will interest you: The Empire Turns the most easily—is practically frictionless;—Is most easily washed—a few simple parts without a cranny or crevice in them;—

Gets all the cream, and the highest quality of cream at that;—

Is durable—will not get out of order—will cost you practically nothing for repairs.

These facts spell dollars for you, if you give them the opportunity.

## Let Us Prove Them

Send for our new catalogue and proofs. Ask for our free dairy books too. They cost you *nothing*, but will show you where you can make *dollars*.

### Side Helps to the Balanced Ration.

To the Editor of The Homestead:

The balanced ration is absolutely essential to the economical production of milk; but, while this is true, the balanced ration will not be nearly so effective when the cow is poorly sheltered, abused or irregularly milked, fed or watered as it would be were all these rules observed.

Therefore, I feel that the articles I have written on dairy rations would not be complete without adding the side helps. Take, for instance, the matter of shelter. The dairy cow is delicately organized and cannot withstand the chilly blasts of winter and the cold spring and fall rains and produce milk economically. The fattening animal converts a great deal of its food into fat and can withstand cold and inclement weather without difficulty. If compelled to, the milk cow will do the same, but her purpose is not to produce beef. I can look back, not altogether without remorse of conscience, to the time when I used to compel my dairy cows to run in the stalks every day except the stormiest days, when I thought I was very merciful to fill the racks with hay and leave them in the lot.

I never thought of keeping them in the barn during the day as I did my horses. Oh, no! that would cause too much cleaning. But we do learn a few things by dear experience, and when I found that my cows were not even paying for the feed they consumed I began looking around for the cause. I subscribed for the best dairy papers, secured all the bulletins I could bearing upon experimental feeding and care of dairy animals, and I soon found that I had been on the wrong track.

I first began stabling my cows night and day and starting them on a balanced ration on the seventh day of January. I was at that time low on milk and thought it a good time to experiment. I was only milking four fresh cows and two strippers. They were only giving eighty-five pounds a day. By stabling night and day, except when they were turned out to water, and feeding a balanced ration they increased their flow by January 20th to 144 pounds per day. At this time other fresh cows

## A Money-Maker For You

Works Quicker, Easier — Lasts Years Longer than Others. Clean Skimming Guaranteed.

Own an Illinois and you'll get more profit from every cow. Experience of thousands of farmers and dairymen proves it. Don't buy a cheap Separator—you'll be sorry. Get the best. The speed mechanism of the Illinois is much heavier than on ordinary separators, yet it runs with less work. It's easy to turn, easy to clean. No vibration. Low down supply can. Handles fresh or cold milk.

## The ILLINOIS Dairy Separator

is equipped with the wonderful Turbine Disc Bowl

built with the accuracy of a watch. Free from crevices, corrugations or cups. Always in balance. Strong, smooth, cleanable. The Illinois will last a lifetime. Get ALL the butterfat. Get our

Write Today for Free Illustrated "Story of a Runaway"

were added, so we did not continue the experiment longer; but, suffice it to say, they made material improvement in their flow after this for some time and maintained their flow throughout the winter. The best cows I had, I had been condemning simply because they had not had a chance to show their ability.

Experiments along this line at the Indiana station show that three cows, kept in a warm barn at night and turned out in a lot in the daytime, produced, in forty-eight days, 161 pounds less milk than a like number of cows kept under the same conditions, except that they remained out only an hour each day. The better sheltered cows ate less feed and gained 231 pounds, while the exposed cows lost thirty-three pounds in live weight. When we notice also from this experiment that these exposed cows were partly sheltered from the winds by an open shed in the day time and had a comfortable barn at night, it does not require a very fertile brain to figure out the reason why many cows on our

farms are not economical producers. There are other side helps, such as plenty of light in the barn, ventilation, etc., of which we have no data, but which are essential just the same.

Our purpose, however, in these articles is to bring out the improvements which any farmer can make with very little extra cost and will put dollars in his pockets. Of course there are some cows that no amount of care or scientific feeding would make profitable milkers, but, my dear fellow farmers, before you condemn your most faithful servants, give them a chance to redeem themselves and I will guarantee you will be blest in the act. O. O. Brewbaker.

Monthly Variations in the Cream Test.

To the Editor of The Homestead:

Nearly every creamery patron has, at one time or another, noted a variation in the different cream tests that are sent him regularly with the pay check from the creamery. Not infrequently the correctness of the test is doubted. An examination of the factories' method of testing usually reveals no cause for this difference and it is often a perplexing matter to know the cause of the variance. The fact is there is a considerable number of causes that may act separately or together in a way that can cause wide difference in the monthly report issued by the creamery.

The cream separator is a common cause. Where it is run by hand and especially by boys, as it commonly is, or by inexperienced help, there is an easy chance to produce a cream of uneven richness. Slow turning results in thin cream, as a greater amount of milk finds its way through the cream spout than where the machine is run faster.

The separator is therefore the first thing to investigate, as it is naturally at the fountain head of all the trouble. The only remedy is more careful manipulation. If the separator is being operated at the same speed, and skimming

the same amount per hour, from one month to another there ought not be any great variation in the test of the cream.

The introduction of fresh cows into the herd, which is not unusual at this time of the year, may result in changing the uniform richness of the milk and consequently the cream by allowing more of the skimmed milk to pass out the cream spout. For example, suppose a herd was near the end of the period of lactation. There would be a great deal of strippings in the milk. The test should run quite higher than when those same cows were fresh and were giving their full yield of milk, that is, if the cream screw on the separator remained unchanged.

Sometimes the cream hauler is to blame partly for a variation, in the test. If he is careless in taking samples he can easily get different samples mixed. Or he can take a sample that will not be representative of the cream in your offering. He may forget to stir it and take a sample that is largely composed of the richest cream on the top. Again his sampling tube may be filled from the bottom of your can. Of course, if he gets the richest one time and the thinnest another in equal proportions, the result will probably be about right. Nevertheless a careless way of taking samples may be one of the sources for the variation.

There are a great many causes that may tend to create this variation. It is just as likely that the trouble may lie with the seller of the cream as the buyer. It is well in any case, however, to learn the reason for the variation of the test. Dairyman.

Stack & Hultine Make \$95 Average.

The sale of Short-horn cattle made by Messrs. Stack & Hultine, of Harvard, Neb., on March 20th, made an average of \$95 on twenty-seven head sold. The sale was well attended and the good things of the sale were picked up at good prices. The top price paid was \$177.50 for the great cow, Nebraska Belle, a daughter of the great Scotch bull, Goldie, she going to Messrs. G. B. Lobb & Son, of Clay Center, Neb. There was an extra good lot of bulls in the offering and they sold at prices very satisfactory to the owners. Below is a list of the purchasers: Sweet Auburn, John Brady, Kearney, Neb. .... \$130.00 Daisy, W. H. Carper, Harvard, Neb. .... 105.00 Duke of Mirth, Chas. Fitzinger, Harvard, Neb. .... 67.50 Pussy 3d, Willie Lorimer, Harvard, Neb. .... 72.50 Saronville Duke, John Brady, Kearney, Neb. .... 62.50 Grand Duke, same ..... 62.50 Grover, C. E. Whittington-Harris Poland Sale at Redfield, Iowa.

The weather man was undoubtedly laying for the above named gentlemen when they chose the 13th day of March to hold a combination sale at the above place. Roads were almost impassable. However, a good crowd came out, as they had good prospects of seeing some nice stuff. In this they were not disappointed, and Mr. Whittington's consign-

IMPORTANCE OF BUYING CREAM SEPARATORS THROUGH LOCAL AGENTS.

This heading voices a most important consideration in the purchase of a Cream Separator, and points a most serious objection to the purchase of such a machine by the "mail order" method, even if good separators were sold in that way.

While the Cream Separator is a simple machine when once understood, it is nevertheless of the greatest possible importance that it be set up and started just right, and that the user have the brief personal use instruction necessary in its handling and operation. If not, it may mean several years of difference in the life of the machine and a good many dollars of difference in the results from its use.

Then, no matter how carefully used, things do happen, even to the best of separators. It makes a lot of difference if you have a competent man near at hand to tell you just what is wrong and how to fix it. It makes even more difference to be able to get necessary repair parts right and quickly, instead of having to send off to some distant concern for them, which only sells machines somebody else makes, and whose employees would not know a separator if they saw it, and the parts for which are more likely to be wrong than right when you do finally get them.

All this is the business of the local agent for DE LAVAL machines. It is just what he is expected to do for users. Of course, he makes a small commission out of it, but the user can mighty well afford to pay that commission, and it would be a big mistake to try to save it, even in the purchase of a good separator. It is still more so in the purchase of the kind which is sold in the "mail order" way.

The buyer of a Cream Separator should never lose sight of the big DAILY difference in dollars-and-cents results between the good machine and the poor one. A DE LAVAL catalog, to be had for the asking, helps to make plain these differences.

## HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

### Spraying With Copper Sulphate.

To the Editor of The Homestead:

There has been considerable discussion recently in regard to spraying with copper sulphate for fungous diseases before the leaves and blossoms have come out upon the trees. It is hard to get a definite recommendation either way, however, as no very conclusive experiments seem to have been performed.

Considering the fact that copper sulphate is soluble in water and hence more penetrating, it would appear that its use would be commendable wherever possible. Moreover it is much stronger than bordeaux mixture and it is quite probable that it would destroy many fungi before they had started into growth. It is recognized that bordeaux mixture will not do this, also that many of the fungi start into growth before the leaves and blossoms appear, and hence at a time when copper sulphate solution may be used.

We would recommend that in an orchard which is very badly infected, especially with apple scab, that at the latest possible time before the leaves and blossoms appear a thorough spraying should be given with a solution of copper sulphate according to the following formula:

Copper Sulphate ..... 4 to 6 lbs.  
Water ..... 50 gallons

This must not be used after vegetation has started, as it will burn and injure it very severely. In the last few bright warm days before the leaves come out its use should result in considerable good. It should, of course, be followed with three or four thorough sprayings with bordeaux mixture at the season advances.

Franklin Brown.

Try a Few Acres of Beans and Peas This Season.

To the Editor of The Homestead:

Beans and peas can be made the most profitable crops on the farm when their full value is known and utilized. They may be grown for seed or fodder, and by those farmers who observe a regular rotation of crops they can be placed with such grains as corn, wheat, oats, barley, etc., to excellent advantage.

The last-named grains to do well require plenty of nitrogen in the soil, and to secure good crops year after year, the supply of nitrogen must be replenished in some manner. Beans and peas, being leguminous crops, gather the free nitrogen from the air and deposit it in the soil and therefore supply just the element which the other grains remove. They take the place of fertilizer and at the same time the crop is very valuable. The seed always commands a good price and the vines make the very best kind of food for cattle, sheep, horses, etc., as they are rich in protein, which is the most expensive constituent of stock foods.

A good four-year rotation would be corn on clover sod, followed by beans or peas, then wheat and sow to clover. A three-year rotation would be beans or peas on clover sod, followed by wheat. The crops in the rotation may be varied, of course. Many prefer planting beans or peas in place of clover, as they are a more sure crop and as a rule more valuable, considering both the market value of the seed and the high feeding value of the straw.

As the time for planting is drawing near, a word in regard to the preparation of the soil should not be out of place. Early plowing is essential to the best results. As beans and peas are not planted until late in the spring many farmers let the plowing go until shortly before planting time, to the great detriment of the crop. To get the best results the land should be plowed about five or six weeks before the time for planting, and in the meantime should receive frequent harrowings to produce a loose, mellow seed bed. With heavy clay soils, even better results will be obtained if the land is plowed in the fall and then well worked in the spring until planting time.

In the rush of spring work it may seem like spending a great deal of valuable time on simply the preparation of the soil, but the returns will more than

## USE IOWA Seed Corn

If You Want Perfect Corn.

Iowa stands at the head as a corn growing state. The soil and climate here are specially adapted to it and practically all the best varieties have originated with us. Seed corn has been our great specialty for over 20 years, and we are the largest dealers in the U. S. It will pay you to try our

### BIG 4 FOR 1907

**New Golden West.** The nearest perfection of any corn ever offered. Notice cut showing depth of grain, smallness of cob and how well it rounds out over both tip and butt. Ears large and solid; bright golden yellow. Matres in 100 days. Per pk. 65c; bushel, \$2.00; 10 bushels, \$17.50.

**Iowa Silver Mine.** Has the reputation of being the most productive of all. Yielded 215 bushels per acre in the great corn contest. Per peck, 60c; bushel, \$1.60; 10 bushels, \$14.00.

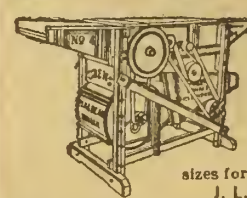

**Iowa Gold Mine.** Deepest grained pure yellow variety. Matres in 90 days. A veritable mine of wealth for farmers. Per peck, 60c; bushel, \$1.60; 10 bushels, \$14.00.

**Farmers' Reliance.** Earliest dent corn in existence. Matres in 85 days. Double the size of Pride of North, with deep grain. Every farmer should plant this extra early. Per peck, 60c; bushel, \$1.60; 10 bushels, \$14.00.

**SPECIAL OFFER.** One peck each of above for \$2.00; one bushel of each, \$8.25. Above prices are for thoroughly tested seed from selected ears. Write today for a copy of our large, illustrated catalog, describing all the best varieties of Seed Corn, Oats, Wheat, Potatoes and all other farm and garden seeds. If you mention this paper in your request we will also send small samples of all of the above varieties.

**IOWA SEED COMPANY, Des Moines, Ia.**

## Learn How to Raise Beans and Peas With Profit

OUR NEW BOOK fresh from the press tells you all about it. It is entitled "HOW TO GROW AND HANDLE YOUR BEAN AND PEA CROP SUCCESSFULLY." It is full of information, given by the best authorities in the country, and it is free for the asking, if you tell us how many acres of beans or peas you can raise, if you should think it profitable. This book shows you that beans and peas bring you more money per acre at less expense than any other crop, and you can depend on what the book says. It also tells you about the OWENS BEAN AND PEA THRASHER.

The only machine that thrashes without splitting, and separates the vines and pods, and has a double cylinder. It is built in different sizes for the jobber, the large and small raiser of beans and peas. Write today. J. L. OWENS CO., 614 SUPERIOR ST., S. E. MINNEAPOLIS, MINN.

## A SWEET CHESTNUT TREE

To get this valuable "Blizzard Belt" Chestnut quickly introduced and at same time gain new friends, we offer to send a Hardy Sweet Chestnut tree 1 year old, entirely Free to a limited number of property owners not already our customers. Mailing expense 5cts which send or not as you please. A postal will bring the tree. Our Catalog containing 64 colored plates of our "Blizzard Belt" Fruits, Ornaments, Evergreens, etc., and a mine of valuable information for fruit-growers is free. Write today. The Gardner Nursery Company, Box 702, Osage, Iowa.

## We Breed 7 Varieties of SEED CORN

We raise every ear of corn sold by us for seed on our own farms. We cultivate 7 large farms; each of them produces a pure variety of seed corn. Our plan of cultivation insures your getting pure bred corn, the best varieties.

We have increased the yield of certain varieties from 35 to 90 bushels per acre on the same land. That shows what breeding will do. If you want some of that kind of seed corn send your name for catalog. We sell hundreds of bushels of seed corn to our neighbors annually; they tell us it is the best they can find anywhere. That's proof that our seed is what you want.

Box 16

W. W. VAN SANT & SONS

Farragut, Iowa.

## WRAGG NURSERY GUARANTEES

WE PAY FREIGHT. We Grow Our Own Stock and Guarantee it to be the best on the market. We have a full line of TREES, SHRUBS, ROSES and EVERGREENS, etc. which we will ship you on approval, freight prepaid.

Why not order Evergreens, of which we make a specialty, for a wind break for your home? We guarantee lowest prices on everything in our line. Write for free cut-rate price list.

## Get All Your Hay and Grain is Worth by Shipping to J. J. CONSIDINE CO., 99 No. Jefferson St., CHICAGO

**HAY** RECEIVE HIGHEST QUOTATIONS AND QUICKEST RETURNS. **GRAIN** REFERENCE: National Bank of the Republic. Write for market quotations. FREE UPON REQUEST.

## Seed Corn

Prof. Holden of Ames College, Iowa, told us Feb. 7th that he regarded Goddard's "Silver King White Dent" as a remarkable corn. One of the very best. We control 1906 crop of "Silver King" grown in this county (Winnebago) by the man who perfected and named "Pride of the North." Let us send you history of this wonderful corn. We grow all standard varieties. Sow Northern Grown Seeds. Get our catalog. **THE ADAMS SEED CO., Decorah, Iowa.**

pay for the time and labor expended.

It requires some experience in the culture of beans and peas, the same as all other crops, to secure the best results, and one thing which is a fact, but is not appreciated by many farmers, is that as a rule better results will be obtained from the second crop of beans or peas on the same land than from the first.

Try a few acres this season.

A Bean Grower.

### The Culture of Asparagus.

To the Editor of The Homestead:

During recent years the culture of asparagus has received more attention than in former years, yet the supply does not yet equal the demand. Although there are many very extensive

beds there is still room for more. Every farmer should have a bed of this most wholesome and delightful vegetable, if not for market, enough should be raised for family use. There is not a vegetable that pays better for the amount of labor and expense on the same amount of ground.

There are two methods by which plants can be secured, viz., from seeds and from roots. If roots can be obtained from a reliable firm this is the quickest way to start a bed, and the earlier returns will more than pay for the plants, but plants should not be over two years old for the best results. There is so little difference in the looks of the stunted old roots and the young that an unreliable firm is apt to pawn them off for two-year-old plants. Th

writer once ordered two hundred and fifty roots from a local nurseryman, who used shipped stock and at the same time planted roots grown from seed in the home garden. The result is a nice bed of thrifty plants from the home grown, but not a spear to show for the former. But roots can be purchased from reliable firms with good results. The writer has had good success taking up the young plants that grow from the fallen seed by taking them up after a rain, being careful to take up enough dirt not to disturb the young plants and setting them in rows or beds where they were shaded, between apple trees. They should not be disturbed till two years old. If there is not an old bed from which young plants can be secured, nearly all seedsmen have them for sale. The seed should be sown early in the spring and when two years old, transplanted in a bed where it can remain permanently. If properly taken care of it will be profitable for many years. I have known one to pay well for over twenty-five years, when the owner left it to renters.

The selection of the ground is quite important, if for early use or market and for rapid growth the soil should be a little sandy and not on low ground where the water would stand. It should not be shaded, but have the direct rays of the sun. The ground should be free from rock, rubbish and weeds and should be heavily manured. The ground should be plowed deep and well pulverized, then rows marked out two to six feet apart, making a furrow six inches deep, in which the crowns or roots are to be set. Some growers vary as to the distance between the rows and plants, but the important thing is to have room for thrifty rows and room enough to cultivate between the rows. Asparagus should not be cut till the second year, and the season for cutting should not be delayed longer than the first part of July, as it is injurious to the life and vitality of the roots.

In the fall when the tops have matured they should be cut down and burned, then a heavy dressing of manure applied and left till the frost is out in the spring. When the ground is dry enough to work well it should be cultivated, taking a shallow furrow, so as not to cut off the crowns, but to simply pulverize the soil. Then go over the ground with a good harrow. Some growers may vary from these methods with good results, but the writer has marketed some fine asparagus, which has been complimented as "the best on

## A Common-Sense Talk On Manure Spreaders

I. H. C. Corn King and Cloverleaf Spreaders

THERE'S no doubt that the right kind of manure spreader is a good thing for you to have. It is probably true that there is no other farm machine that, if rightly chosen, is as valuable to the farmer. If manure is spread properly and at the right time, its money value far exceeds what you're apt to think.

But when you buy a manure spreader have a care. There are many of them on the market, and many with various "special features"—fancy affairs that do them more harm than good.

When you buy a spreader look out for these things—and avoid them. What is chiefly to be desired is *strength and simplicity of construction*.

Strength is essential because a manure spreader has to carry a heavy load and the rear end—the machine end—has hard work to do.

Simplicity of construction lessens the chance of the machine getting out of order and gives *light draft*. You know there are a good many manure spreaders that don't get out of the shed after the first year. They make too much trouble and cause too much delay.

are strong and simple. The frame is carefully-selected, well-seasoned lumber, and is strengthened by heavy cross sills and truss rods. They have steel wheels with staggered spokes, and both hind wheels have clutches. The box is made of selected stock and is securely fastened to the frame by heavy steel cleats. Corners are re-enforced with steel plates. Everything is of the very best.

Both of the rear wheels are drivers, and insure plenty of power. A large sprocket with heavy chain drive transmits the power to the cylinder. The cylinder is large and strong, and the square teeth (extra long) are made of the best high carbon steel.

The power for driving the apron is applied on both sides, giving an even movement and making binding impossible. The rollers are attached to the under side of the slats instead of to the frame.

The vibrating rake is a most important feature, and is found only on Corn King and Cloverleaf spreaders. It levels the load and brings the manure squarely up to the cylinder—a thing which is absolutely essential to

proper spreading. The teeth on the vibrating rake are held in place by coiled steel springs so they never break but adjust themselves to the size of the load.

And as a result of simple construction, the operation is simple. Any one who can drive a wagon can operate an I. H. C. spreader, for one lever does it all. There are ten feeds, ranging from ten to thirty loads per acre. The apron stops of its own accord when the load is all fed out. By reversing the lever it returns and again stops when back in position. No need to watch it at all.

These are some of the reasons why you should investigate I. H. C. Corn King and Cloverleaf spreaders before you buy. There are many other good points about them that are explained in our catalogues. There are two kinds—Cloverleaf, an Endless Apron machine, and Corn King, a Return Apron machine; each made in three sizes.

Call on the Local Agent or write for catalogues.

INTERNATIONAL HARVESTER COMPANY OF AMERICA, Chicago, U. S. A.  
(INCORPORATED)

the market." But every farmer should raise enough for home use if not for market. Some can asparagus the same as peas or sweet corn, cutting it up and filling the bottles with cold water and cooking three hours, but the writer has not tried the experiment. E. E. G. Minnesota.

### The Clark-Lessman Sale.

The Short-born sale of Messrs. Wm. Lessman and A. B. Clark, at Wayne, Neb., on March 13th, was well attended and it was a decided success. Thirty-eight head averaged \$100.39. The bulls averaged \$104.40. Mr. Clark sold fifteen head of young bulls which averaged \$103. The top price of the sale was \$200 for Scotch Fashion, and he was purchased by Messrs. O. S. Bare & Son, of Clearwater, Neb. The cattle were not specially prepared for sale, but were in good condition for the buyers present. Colonels Cunningham, Dennis and Walker cried the sale. Below is a report of those selling for \$100 and over:

A. B. CLARK—BULLS.		
Gwendoline Chief, one year, M. H. Damme, Wayne, Neb.	110.00	
Fame's Hero, one year, L. S. Windsor, Wayne, Neb.	160.00	
Duchess' Victor 252588, one year, Wm. Willoughby, Newcastle, Neb.	100.00	
Jupiter 2d 275133, one year, Wm. Jones, Laurel, Neb.	105.00	
Roan Comet, one year, Alfred Sivers, Newman Grove, Neb.	150.00	
Hector 2d, Chas Pfiel, Wayne, Neb.	100.00	
Dewey Vermouth, one year, Frank Owens, Vermouth, Neb.	115.00	
Harrison, one year, John Newman, Wayne, Neb.	110.00	
Baron Cup, one year, Geo. I. Parker, Coleridge, Neb.	102.50	
Red Gauntlet 4th, Hans Luedert,		

Bancroft, Neb.	110.00
W. M. LESSMAN—COWS.	
Daisy Fashion, two years, G. C. Saberson, Allen, Neb.	140.00
Rose, three years, L. S. Windsor, Wayne, Neb.	100.00
Rosemary of Maple Lodge, nine years, A. B. Clark	100.00
Queen 3d, Seever, Newman Grove, Neb.	100.00
Lady D'Arc 3d, two years, F. M. Hooper, Carroll, Neb.	115.00
Daisy Bell, two years, G. C. Saberson	135.00
BULLS.	
Scotch Fashion 135959, eight years, O. S. Bare & Son, Clearwater, Neb.	200.00
King Fashion, one year, Lusk Evans, Carroll, Neb.	102.50
Royal Arch, two years, B. P. Peterson, Carroll, Neb.	117.50

### LOW RATES TO THE PACIFIC COAST.

Low-rate Colonists' tickets on sale daily until April 30th. Daily and personally conducted tours in through Pullman tourist sleeping cars to San Francisco, Los Angeles and Portland.

Very low rates for the round trip will be in effect to San Francisco and Los Angeles April 25th to May 18th, limited to July 31st, and June 8th to 15th, limited to August 31st; also to Portland and North Pacific Coast points June 20th to July 12th, limited to September 15th. Favorable stop-over arrangements. Apply to any ticket agent of the North-Western Line for full particulars.

The Homestead and The Homemaker, \$1.25 per year.

## SEED CORN

I have an early yellow "Improved Corn," 10 days earlier than "Reid's" corn. I can give history of this corn for 70 years. I sell seed in the ear only and guarantee satisfaction or your money back.

The Counties in which my corn was planted last year by the experiment station and the record was:

COUNTIES.	BU.	COUNTIES.	BU.
Kossuth, -	78-4	Greene, -	65-3
Story, -	62-1	Polk, -	60-4
Chickasaw, -	68-3	Marshall, -	67-5

AGENTS wanted to introduce Burbank's wonderful stoneless plum—Miracle, and sell our well-known hardy nursery stock. Big pay. Best proposition offered salesmen. Oregon Nursery Co., Detroit, Michigan.

## The Clarke Short-horn Sale.

The greatest sale held in the West in many a day was that of Mr. C. E. Clarke of St. Cloud, Minn., at South Omaha, on March 27th. Those who knew the Clarke herd had predicted a good sale and were not disappointed. The cattle were in excellent condition and it was an offering that is seldom found in a public sale ring. The leading Short-horn breeders of the central West were present. Iowa was well represented and many of the best cattle went to breeders in this state. Nebraska was out in full force, as were also Missouri, Illinois and Minnesota. Col. F. M. Woods opened the sale with one of his characteristic talks and laid considerable stress on the offering that was to be sold. He paid a tribute to Mr. Clarke and the work he had done in behalf of Short-horn cattle, and also to Mr. Leslie Smith, his well-known herdsman, who was mainly responsible for the success of the Meadow Lawn herd. Colonel Harris paid his respects to Mr. Clarke and his herd, and spoke of his quarter of a century acquaintance with the work of this well-known breeder. Mr. B. O. Cowan was also called upon and spoke highly of the cattle about to be sold. Fifty-four head brought \$17,620, or an average of \$326. Forty-two head of females averaged \$33.54 and twelve bulls averaged \$301.25. Mr. H. C. Duncan purchased 47th Duchess of Gloster at \$1,000, the highest price of the sale. Fairplay 6th and her bull calf sold for \$830 and was purchased by Mr. C. R. Warren, of Glenwood, Iowa. Mr. C. P. McCartney, of Gresham, Neb., secured Knight Commander, an International prize winner, at \$825, he being the top of the bull offering. With the exception of the Westrope sale in 1901, this was the highest average on Short-horns ever made at South Omaha. Colonel Woods cried the sale and was ably assisted by Cols. Geo. P. Bellows and Al. P. Mason. Below is a list of those selling for \$100 and over:

## COWS.

I sell my paint direct from my factory to user you pay no dealer or middleman profits.

## My \$100.00 Cash Guarantee

I guarantee, under \$100 Cash Forfeit, that the paint I am offering you does not contain water, benzine, whitening, or barytes—and that my Oil is pure, old-fashioned linseed oil and contains absolutely no foreign substance whatever.

I guarantee the freight on six gallons or over. My paint is so good that I make this wonderfully fair test offer:

When you receive your shipment of paint, you can use two full gallons—that will cover 600 square feet of wall—two coats.

If, after you have used that much of my paint, you are not perfectly satisfied with it in

every detail, you can return the remainder of your order and the two gallons will not cost you one penny.

No other paint manufacturer ever made such a liberal offer.

It is because I manufacture the finest paint, put up in the best way, that I can make this offer.

I go even further. I sell all of my paint on six months' time, if desired.

This gives you an opportunity to paint your buildings when they need it, and pay for the paint at your convenience.

**Back of my paint stands my Eight-Year officially signed, iron-clad Guarantee.**

For further particulars regarding my plan of selling, and complete color card of all colors, send a postal to O. L. Chase, St. Louis, Mo. I will send my paint book—the most complete book of its kind ever published—absolutely free. Also my instruction book entitled "This Little Book Tells How to Paint" and copy of my 8-year guarantee.

### Billiter, Burriss & Billiter's Sale of Stallions.

Reports from Carroll, Neb., where the above establishment held their sale of imported stallions March 13th, state that exceptionally good prices were secured for everything that was sold. A dozen choice stallions were advertised and sold for prices given below. The attendance was large and represented all parts of the country. A few of the stallions went to Iowa parties. Buyers were well pleased with the showing that this establishment made, and undoubtedly these breeders and importers have made a good impression on the horsemen of their state and surrounding states in this their first auction sale. Five Polled Durham bulls brought good prices, as is shown in the attached list. Watch these people in the future for something good.

The annual meeting of the Texas Cattle Raisers association at Fort Worth was a decided success. The attendance of Texas stockmen was heavier than for many years, indicating that they are prosperous, while on account of the scarcity of free transportation, as well as for other reasons, there were comparatively few Northern men there. There was quite a little trading. Twos sold at \$20@22, or largely around \$21, while yearlings went at \$16@16.50,

## THIS ON TRIAL FREE

### MILL

We'd like to tell you how we send our "Corn Belt" Feed Mills on 30 days trial free, and why it's the mill for you to buy. This is the one mill you'll like better the longer you use it. 20 days gives you time to see how it works—how it's made. "Corn Belt" Mills grind all kinds of grains evenly and rapidly. Write today for free catalog describing full line of sweep and power mills.

**Spartan Mfg. Co.**  
282 Chambers St.,  
Salem, Ill.

prices that were not very much higher than a year ago. Cattle have wintered well and indications are that the movement North this spring and summer will be fully as large as a year ago, and possibly heavier. The convention came out strong for reciprocity, and it loomed up as a paramount issue. Short-horn breeders are elated over the capture by that breed of the grand championship. The Texas Short-horn Breeders association elected the following officers for the coming year: President, David Harrell, Liberty Hill; vice president, Charles McFarland, Weatherford; secretary and treasurer, Stuart Harrison, Fort Worth.

## BABY'S ITCHING RASH

Face and Feet Covered—Rest Broken and Would Cry Till Tired Out—Immediate Relief and Speedy

## CURE BY USING CUTICURA.

"My baby was about nine months old when she had rash on her face and feet. Her feet seemed to irritate her most, especially nights. They would cause her to be broken of her rest, and sometimes she would cry until she was tired out. I had heard of so many cures by the Cuticura Remedies that I thought I would give them a trial. The improvement was noticeable in a few hours, and before I had used one box of Cuticura Ointment her feet were well and have never troubled her since. I also used it to remove what is known as 'cradle cap' from her head, and it worked like a charm, as it cleansed and healed the scalp at the same time. This may be the means of helping other suffering babies. Mrs. Hattie Currier, Thomaston, Me., June 9, '06."

April 4, 1907.]

## OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

## LAW QUESTIONS CONSIDERED.

## MARRIAGE OF FIRST COUSINS.

A Subscriber, Hartington, Neb.—Is it lawful for first cousins to intermarry in Nebraska?

Answer—First cousins can lawfully marry in Nebraska.

## BANKRUPTCY—EXEMPTIONS.

A Subscriber, Perry, Iowa.—A neighbor recently took advantage of the bankrupt law, and still has forty acres of land on which he lives. Does the law exempt forty acres of land for a married man. What other property, if any, is exempt?

Answer—The United States bankruptcy law allows a person who takes advantage of its provisions to have exempt the same property which the law of the state where he lives, exempts from execution and attachment. In Iowa a homestead of forty acres is exempt by state law.

## QUARANTINE EXPENSES.

Mr. Will Leamer, Hubbard, Neb.—When the board of health quarantines a family on account of small pox, what are its duties in the matter, under the laws of Nebraska, especially with reference to the support of the family while the quarantine continues?

Answer—In cities and villages the matter is regulated by ordinance, so if your case is in a city or village, you must look to the particular ordinance relating to quarantine. Where the county board quarantines a person or a family at a hospital, pest house or other place, the county is liable for all expenses, including support of such person

or family, but where a person or family is quarantined at the home of such person or family, the county is not liable for the support of the person or family, but only for the strictly quarantine expenses.

## DIVISION OF CROP.

A Subscriber, Bridgewater, So. Dak.—A rented his farm to B for one year, rent to be one-third of the crop. The lease expires on the first day of March, 1907. B left the place last fall just before corn picking. He hired A's share picked. Has B a legal right to sell the cornstalks against A's consent?

Answer—While it depends somewhat upon the language and terms used in the lease, we think that B has a right to sell two-thirds of the stalks in the field, to be taken off before the expiration of his term. Your general statement that the rent was to be one-third of the crop, would seem to bear out such a conclusion. The crop consists not only of the grain, but of the stalks as rough feed, as well.

## CONNECTING WIRE WITH TELEPHONE LINE.

An Iowa Subscriber.—Twelve farmers formed a mutual telephone company. It was not incorporated. The members mutually agreed that there should not be more than twelve phones on the line. Another party wanted to attach a phone, but this was refused by the members of the company; then the party did attach his phone to the line without the consent of the members of the company. Had he any right to do so, and what steps are necessary to make him disconnect his phone?

Answer—He had not. He is liable to a fine not exceeding \$500 or imprisonment in the county jail not exceeding six months. Perhaps if he knew this he would disconnect his phone. The company has a right to disconnect it without any legal proceedings.

## VETERINARY MEDICINE AND SURGERY.

A Subscriber, Logan, Iowa.—If a person has taken a course of study in veterinary medicine and surgery and secured a diploma from a correspondence school in Canada or elsewhere, can he lawfully practice as a veterinarian in Iowa?

Answer—He cannot. In order to practice veterinary medicine and surgery in Iowa, a man must hold a diploma from a legitimate recognized veterinary college, or the veterinary department of an agricultural college that is recognized, and also pass an examination before the state board of medical examiners.

## RAILROAD FENCE—MISSOURI.

Mr. C. W. Lindsay, Jamesport, Mo.—(1) Are railroad companies in Missouri required by law to fence their rights of way with a woven wire hog-tight fence? (2) Is it necessary to notify a railroad company to construct such a fence between its right of way and the adjoining lands belonging to a private owner?

Answer—(1) They are required to fence with a lawful fence, sufficient to prevent horses, cattle, mules and all other animals from getting on railroad; but it need not be a woven wire, hog-tight fence; any other kind that will answer the purpose being sufficient. If

## For the Protection of Property and Pocket-book

Pure White Lead Paint protects your property against rot and rust; against repairs, replacement and deterioration. It makes buildings, wagons, and implements look better, wear better—and sell better when you want to sell.

Use only Pure Linseed Oil and Pure White Lead made by the Old Dutch Process, which is sold in kegs with this Dutch Boy trade mark on the side.

This trade mark protects you against fraudulent mixtures sold as white lead, adulterated white lead and worthless substitutes for white lead.

Look for the Dutch Boy when buying paint.

## Send for Book

"A Talk on Paint," gives valuable information on the paint subject. Sent free upon request.

## NATIONAL LEAD COMPANY

Send money and have your orders booked at once. W. F. CHAMBERLAIN, (The Perfect Chick Feed Man) KIRKWOOD, MO.

## SHOEMAKER'S BOOK on POULTRY

and Almanac for 1907 contains 220 pages, with many fine colored pictures of fowls true to life. It tells all about chickens, their care, diseases and remedies. All about incubators and how to operate them. All about poultry houses and how to build them. It is really an encyclopedia of chickendom. You need it. Price only 15c. C. C. SHOEMAKER, Box 1216 FREEPORT, ILL.

## Hatch Chickens by Steam with the EXCELSIOR INCUBATOR Or WOODEN HEN

Simple, perfect, self-regulating. Hatch every fertile egg. Lowest priced first-class hatches made. GEO. H. STAHL, Quincy, Ill.

GREIDER'S FINE CATALOG 1907 tells all about pure-bred poultry and describes 60 varieties. 10 beautiful natural color plates. Gives reasonable prices for stock and eggs; how to cure diseases, kill lice, make money. This valuable book only 10c. H. H. Greider, Rheims, Pa.

## POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

## "DUCK POINTERS."

James Rankin gives the following formula for feeding laying ducks:

Equal parts wheat bran and corn meal; 20 per cent Quaker oat feed; 10 per cent boiled turnips or potatoes; 10 per cent of clover rowan, green rye or refuse cabbage chopped fine; 5 per cent of grit. Feed twice a day all they will eat with a lunch of corn and oats at noon.

The first eggs laid by young ducks are very apt to be infertile. Fortunately, however, if the birds are well fed and cared for, this trouble rapidly diminishes, the fertility later on often reaching from 90 to 98 per cent. Watering is a very important matter. They foul their drinking vessels so quickly, that fresh water should be supplied at least four times a day.

The feeding of young ducklings has been reduced to almost an exact science. The following formulas are also given by James Rankin:

The first four days, feed equal parts of rolled oats and cracker crumbs; 10 per cent hard-boiled eggs, chopped fine; 5 per cent coarse sand. Feed four times a day what they will eat clean.

From four days to three weeks old, feed equal parts of rolled oats and wheat bran; 10 per cent corn meal, 5 per cent coarse sand, 5 per cent finely ground beef scrap, skated; finely cut green clover, rye, or cabbage. Feed four times a day.

From three to six weeks old, feed equal parts corn meal, wheat bran and Quaker oat feed, 3 per cent fine grit, 5 per cent beef scraps; mix in green food. Feed four times a day.

From six to eight weeks old, feed three parts corn meal, two parts wheat bran, one part Quaker oat feed, 3 per cent grit. Feed three times a day.

From eight to ten weeks old, feed two-thirds corn meal, one-third equal parts of wheat bran and oat feed, 10 per cent beef scrap, 3 per cent grit; oyster shells and less green food. Feed three times a day. They should now be ready for market.

H. B. Geer is responsible for the statement that a duck must have water about its eyes daily, or it will not thrive. But if a tank or trough of sufficient depth is provided for the ducks to sink their heads in the water clear out of sight, they can do without the pond or stream. When this is not done, they gum up about the eyes, become listless, sit about, don't eat, and soon die. Young ducks that do not have water as above suggested, drop off one by one, to the owner's loss.

Before the laying season it is better to feed more bran than corn meal, but after the laying has become an established fact, reverse by feeding more corn meal than bran. It has been estimated that in its seven months laying season, an average duck will lay about 120 eggs.

## Feeding for Eggs.

To the Editor of The Homestead:

Notwithstanding the fact that the farmer's hen now produces a score of billion of eggs that are worth a half billion dollars, just about equal to the value of the wheat crop, nothing is more apparent than that the egg production of the country is nowhere near the total that could be reached if the average farmer or farmer's wife had a better knowledge of the simplest rules of feeding and general management. If I were asked to point out the greatest deficiency on the average farm, I should not hesitate to name the poultry department if it could be dignified by such a title. And yet the main principles of poultry management can be condensed into a very few words. It is a science, to be sure, like every department of the farmer's profession, and can be gone into deeply and with a corresponding degree of profit, like every other science, but the mere observance of a very few of the simplest rules would treble and quadruple the number of eggs at present obtained. At present I am living in the suburbs of a town, but I find the suburbanite fully as much in the dark toward the requirements of mother hen as his or her more rural neighbor.

The most essential part of poultry management is knowing how to feed and it is exactly here that the most ignorance is displayed. My observation is that the commonest and at the same time the most serious error lies in the quantity rather than the quality of the feed. The plain truth is that the average hen simply does not get enough to eat to be able to lay eggs. All

## INCUBATORS ARE MONEY-MAKERS

The "Sure Hatch" kind pays best, because it's sure. It's the kind that runs itself with the least oil and gets the most chickens. For ten years the SURE HATCH INCUBATOR has been a leader, without an equal in construction, appearance, results produced or low prices, \$30.00 in use. We Pay Freight. Unlimited time given for trial. Our goods guaranteed 6 years. Our new Sure Hatch Book tells all about our machines. Worth dollars, but FREE to you. Write today. Sure Hatch Incubator Co., Box 16, Fremont, Neb., or Dept. 16, Indianapolis, Ind.

## HATCH-ALL Incubators and Brooders

The new catalog is worth money to every farmer and poultry raiser.

## THIS INCUBATOR HATCHES

The brooder opens up and can be swept out clean in one minute. Chickens always healthy.

Hebron Incubator Company, Box 8, Hebron, Nebraska

## 125 Egg Incubator and Brooder

If ordered together we send both for \$10 and pay freight. Hot water, copper tanks, double walls, double glass doors. Free catalog describes them. WISCONSIN INCUBATOR CO., Box 71, Racine, Wis.

Both For \$10

## BIG MONEY IN POULTRY.

Our big Poultry Book with many new illustrations tells how to make it; also how to feed, breed, grow and market Poultry for best results. Plans for houses and a great mass of useful information. Tells how to start small and grow big. Illustrates and describes the largest pure bred Poultry Farm in the world; tells about our many varieties; quotes lowest prices on Fowls, Eggs, Incubators and Brooders. Mailed for 4c. FRANK FOY, BOX D, DES MOINES, IOWA.

## FOR SALE:

Live deer, all ages, white swans, California quails, ferrate, Belgian hares, Jack rabbits, wild geese, brants, canary birds, goldfish, Homer pigeons, mink, hand-raised parrots, all kinds of wild ducks, fancy pheasants and Scotch collie puppies. We have no catalog. Write your wants. We buy all kinds of rare animals and birds or any of the above stock. Deer Lake Park, Severy, Kan.

## A Hundred Per Cent

Is no uncommon hatch for

## Petaluma Incubators

They are the oldest and most reliable machines on the market. Ranges are uniform and always high. Redwood and copper materials. Devices purely automatic and sure. Write us for free catalogue. PETALUMA INCUBATOR CO., Box 5, Petaluma, Cal. Box 2, Indianapolis, Ind.

for sitting, but the eggs of turkeys are even more delicate. They should be kept in an even temperature of fifty to sixty degrees, but the temperature, if not extreme either way, is not of so great importance as is frequent turning of the eggs. Turn them at least once a day, twice is better, and keep covered away from the light and dust. If compelled to keep them in a dry atmosphere, put a damp cloth in the bottom of box occasionally. If they were to be kept without turning the yolks would stick to the shells, and if the eggs dried out too much the effect would be equally disastrous.

It is much better to save up eggs sufficiently long to be able to make about two sittings of the entire lot. In this way you may have all the little poult on the same mixture of feed at the same time, and this also does much to lighten the labor of care-taking. Besides, if the poult are of equal size they will not be able to injure one another by tramping and crowding when they begin to run in one flock. If good care is taken of the eggs they will hatch well after having been kept four weeks. I have never tried keeping them longer. I have always found it best not to delay a large hatch for the few eggs some late-laying hen will produce. B. F. W.

## How to Tell the Laying Hens.

To the Editor of The Homestead:

Most of us have seen, at least in advertisements, mention of the Potter and the Hogan methods of telling the laying hen. Many have found these valuable, while others appear to discredit their reliability, in part at least. We find in an exchange the method of a poultry expert in England, which is certainly interesting, and worth looking into. This Englishman's name is Chapin, and he claims to be able to pick out all the laying hens in a flock by simply looking at the head. He maintains that it is not so much dependent on the shape of the hen's body as the certain shape of the head, eyes, and head feathers. In a good layer the eyes are prominent, well set to the front, the head is narrow, alert, and set in a certain poise. The head feathers must lie flat away from the comb. Feathers growing up at the side of the comb indicate a poor layer.

Poultry knowledge is disseminated in England by poultry lectures in various parts of the country. These lectures are

## Care of Turkey Eggs.

To the Editor of The Homestead:

One of your subscribers sends the following communication:

I would like to know at what temperature turkey eggs for hatching should be kept, and how is the best way to keep them.

Care of the turkey eggs should not cease with the gathering of them from the nests, for success with the season's crop depends upon the manner in which they are cared for previous to incubating. Chicken eggs are tender enough to need careful attention while saving up

L. R. Johnson.

well attended and much interest shown. Mr. Chapin is in great demand to explain his methods and to answer questions. It will be well for poultry folk who read this brief outline of his theory, to test it in their own yards, and report their conclusions.

A funny story was told in connection with Mr. Chapin's lectures. At one meeting a young man brought a hen for Mr. Chapin to examine that had never laid an egg to the family's knowledge; never had been seen on a nest, and was considered without doubt a drone among the busy layers. Nothing of this was told Mr. Chapin, of course, and when, upon examination, that gentleman stated that she was then laying, and was also a hen that would produce over a hundred eggs a year, the laugh seemed to be upon the lecturer, but he maintained that he was right. The discussion waxed warm, and ran into bets. The young man was so confident in the matter, so certain that his hen never had laid, and never would lay, that he had her killed and dressed right there, with two veterinarians in the audience as referees. The hen was found full of eggs maturing for regular laying. The owner was dumfounded at the revelation, but upon investigation it was found that the hen, from the first egg, had gone to a neighbor's barn to lay, and he had appropriated her eggs. Thus was Mr. Chapin's knowledge vindicated, and his theory gained great credence.

Mrs. S. B. Titterington.

### Pure Bred Poultry on the Farm.

The poultryman expects and gets 150 to 200 eggs per hen yearly as compared with seventy-five eggs laid yearly by the farmers' hens. In July and August when spring chickens are bringing twelve to fifteen cents per pound on the market the poultryman has a fine lot, averaging in weight four to five pounds, while the farmer must wait until September or October and receive only six or seven cents per pound. Thoroughbred poultry will always make a good showing for the amount of food consumed while common stock will not.

To start with pure-bred poultry it is not necessary to invest a small fortune, as many believe. If you have a mixed flock and do not wish to dispose of them at once and start with pure-bred poultry, improve the laying qualities of your mixed stock; get a pure-bred cock bird from some fancier who has a good laying strain. Mate him with your mixed hens and the next generation will be better layers. Remember the male bird is half your flock. You can get a pure-bred male bird that is not good enough in color perhaps to reproduce his own breed, but is in other respects a good bird and just what you need to introduce new blood into your mixed flock.

Select the breed you are going to raise, and learn all you can about it. The first year get a setting of eggs from some reliable breeder who handles the kind of stock you wish. Or, if you can buy a good pen of them, better still. Take good care of these eggs or pens, whatever it may be and you will be surprised how soon you will own a very fine flock of pure-bred chickens. Each year select your best layers which are good in shape, color and size, and breed from these. The advantage gained by using selected layers is that in a few years you can develop 200-egg hens.

Weed out the old hens. Early hatched pullets are the ones that fill the egg basket when winter prices are high. That is the hen to keep. One year old hens lay better eggs for hatching, but not so many as pullets. After that age most hens do not pay as layers and should be marketed.

In selecting your breed it is not so much the breed as the strain. For instance, we find some Plymouth Rocks which have been bred for high egg-productiveness and which will be just as good layers as the little class, such as the Leghorns.

Too often we find pure-bred poultry condemned because of the lack of selecting the best layers each year. In selecting stock you choose the best. Why not do so with poultry?—(August Hock before Farmers' Institute, Storm Lake, Iowa.)

### POULTRY PARAGRAPHS.

Misfortune will at times come despite the most careful attention. And occasionally we will trip over some stumbling block. But the man who will pick

himself up and make an effort to get the best of his troubles is the one who will come out all right, and profit by his sad experience.

It is not an easy matter to make a pet out of a duck. Geese are more of a domestic nature, and some very interesting stories are told of how ganders have become inseparable companions of old men and women.

The man with a bad temper makes a poor poultryman. Some people are easily vexed, and every shortcoming is sure to cause a rise of temper. Hens are at times contrary, so that it needs a sunny disposition to balance matters.

When a shipment of dressed scrub or mongrel carcasses are sent to market, there are all sorts and conditions. Some are long and some are short-backed, and the majority invariably lack in fullness of breast. This is not the rule when the carcasses of thoroughbreds are marketed.

A hen that is laying is a bigger feeder than one not laying. The amount of grain a heavy layer will consume varies with the individual, regardless of breed. The secret of feeding laying hens for maximum profits lies in close observation by the feeder and intelligent application of the same.

It pays to cater to the market demand, regardless of its whims. If the customers call for brown eggs, keep only such hens as lay brown eggs. If white eggs are wanted keep only white-egg layers. If the trade is a select one, breed for large eggs; have every dozen of uniform size and color. Careful work means success.

At one time the Indian Game enjoyed a boom that promised to be a big success, but all of a sudden the fame of the breed has died out. This, no doubt, was due to the fact that as a breed they are poor layers. As a table fowl there are none better. The breast resembles that of a pheasant or prairie chicken. The heft of the meat lies on the breast, and this fact, with its bright yellow skin and legs, made it a desirable broiler and roasting fowl.

A well-known English poultryman thus comments on capons: "I have eaten capons more than once, and agree with some of our best poultry authorities that the quality of the fowl had been injured for the sake of gaining a little size, and being able to keep cockerels in table condition till twelve months old or longer. I consider caponizing a piece of useless cruelty, only equaled by the old system of spaying heifers, which happily obtains no more."

### The Great American Hen.

The greatest thing in the United States today is the hen. Her portrait "rampant" ought to appear on every dollar, half, quarter and dime that Uncle Sam puts out; for the actual fact is "Biddy's" business brings in more of those same dollars, halves and quarters than any other single—and we might almost say double—American industry. Three hundred million dollars' worth of poultry products is "Biddy's" yearly contribution to the farmer's pocketbook, and if the exact truth were known, a goodly number of those 300,000,000 were made by men and women who have studied how to feed the hen. Such men use good, sound, chicken sense. They begin with young chicks, and follow a consistent system of feeding all through the life of the hen, using with the regular ration that wonderful discovery of Dr. Hess—Poultry Pan-a-ce-a—which builds healthy flesh, bone and feathers, and makes early laying a habit. Now, let us say right here that Dr. Hess Poultry Pan-a-ce-a is not a stimulant. Rather, it is a health-giving tonic, which helps the hen to get out of her food all that Nature would otherwise supply. Poultry Pan-a-ce-a helps the hen to digest her food properly, which of itself gives her health and vigor. It aids assimilation; every grain or particle of food goes where it is most needed to build bone, flesh, feathers, or to make eggs, so that the greatest possible good is realized in the least possible time. The saying that "an ounce of prevention is worth a pound of cure" is doubly true in the poultry business. The wise henman cures his hens before they get sick, and his one certain agent for doing it is Dr. Hess Poultry Pan-a-ce-a. Poultry Pan-a-ce-a and Instant Louise Killer are the result of long study and experiment under just such conditions as the farmer meets with in his own yards. Dr. Hess & Clark, of Ashland, Ohio, are so confident of the good you will get from these preparations that they are willing to give a written guarantee with every package. The cost is so small it's hardly worth considering.

### POINTERS.

—The cockerels which Mrs. P. L. Carroll, of Hampton, Iowa, is using on her Barred Rock flock this year were purchased direct from Messrs. Latham and Bradley Bros. yards. Eggs are for sale from this flock, also from the flock of Mammoth Bronze tur-

keys. Mention The Homestead and write for prices. See this page.

—Mrs. E. F. Escher, of Mannig, Iowa, offers Barred Rock eggs for sale at popular prices.

—Mr. George Glass, of Sac City, Iowa, is offering eggs from Indian Runner ducks. His advertisement appears on this page.

—Barred Plymouth Rock eggs of the Bradley and Norval strains are offered for sale by Messrs. Aye Bros., of Blair, Neb.

—Mrs. L. C. Reese, of Prescott, Iowa, is offering Plymouth Rock eggs for sale from a very choice pen, and at reasonable prices.

—Mr. John Barnes, of Farland, Ill., is offering Barred Plymouth Rock eggs for sale in his advertisement that appears on this page of The Homestead.

—Light Brahma eggs from good stock are for sale by Mrs. J. M. Dries, of Ashton, Iowa. Write her for further information. See advertisement on this page.

—Mr. Peter Geiger, of Minden, Iowa, can furnish Homestead readers with eggs from several varieties of pure-bred poultry. His advertisement appears on this page.

—Eight years of experience in breeding the Golden Single Comb Buff Orpingtons is the record of Mr. A. LeFevre, of Earlville, Iowa. On this page he offers eggs from this breed.

—Carefully assorted eggs from Light Brahmas for hatching are advertised by Mr. Oren G. Spall, of Pleasantville, Iowa. See this page and mention The Homestead when you write.

—Mrs. J. A. Campbell, of Manning, Iowa, writes: "We have three Mammoth Bronze toms left that we will sell at reduced prices. They are nice, big fellows." See advertisement on this page.

—Mrs. H. Osterfos, of Hedrick, Iowa, is offering eggs from choice Black Langshan chickens and Mammoth Bronze turkeys for sale in her advertisement that appears on this page of The Homestead.

—Mr. C. A. Kenworthy, of Oskaloosa, Iowa, advises readers of this paper that he can supply eggs from his Single Comb Reds at popular prices. Mr. Kenworthy was a leading winner at the Iowa State Show the past winter, and guarantees a square deal.

—Mr. D. A. Good, of Ogden, Iowa, writes that his White Plymouth Rocks are simply fine. They are largely of the Fishel strain and are good layers and vigorous stock. Those wishing White Rock eggs should write him their wants, which will be promptly answered. See advertisement on this page.

—Mrs. Jas. Cockerton, of Whiting, Iowa, wishes to get in communication with buyers of eggs from Barred Rock chickens and Toulouse geese. The sittings which she will send out are from choice bred stock adapted to farm conditions. See the advertisement on this page for prices, and mention The Homestead when you write.

—Eggs from Mammoth White Holland turkeys, large Pekin ducks and Barred Plymouth Rock chickens are for sale at prices that should make quick sales, quality considered, by Mr. Fred Post, of Moulton, Iowa. These eggs are from high-scoring fowls and prize takers. Write your needs and kindly mention The Homestead. See advertisement on this page.

—Mr. M. S. Smith, of Grinnell, Iowa, whose new advertisement appears on this page of The Homestead, writes: "My pens are headed by the best males I have ever owned. They are from eastern prize winners and from stock that has been winning premiums regularly each year at Boston and New York." Mr. Smith is advertising Barred Plymouth Rock eggs for sale.

—Mrs. J. H. Richardson, of Bristow, Iowa, wishes to inform our readers that she has eggs from some very high-class White Holland turkeys. These eggs are from mature, vigorous birds which have been carefully mated. If you are looking for a good place to buy turkey eggs we would suggest that you answer this offer which appears on this page. Kindly mention The Homestead.

—Mr. M. Hummel, of Monroe, Iowa, is better prepared than ever to furnish Homestead readers with pure-bred Barred Plymouth Rock eggs from high-scoring, first-prize stock. He won eighteen first and second prizes at the Central poultry show and the Jasper county fair. His fowls have the size, bone and harrling. Eggs guaranteed fertile, and prompt shipment. See advertisement on this page.

—Write Mr. S. V. Latham, of Montezuma, Iowa, for eggs from choice prize Barred Rocks. The flock this year is at its best and the fowls are large and marked right, while the blood is that noted the country over for superiority. Mr. Latham has shipped to every state in the union. Look up his advertisement on this page for egg prices, also on Bronze turkeys, Pekin ducks and Toulouse geese. Write for catalog, mentioning The Homestead.

—Mrs. Silas Cobbs, of Marathon, Iowa, writes that her Barred Plymouth Rock flock this year is in the best shape to produce high-class eggs that it ever has been. By a system of careful mating the eggs are insured of a high degree of fertility. One yard is headed by the first-prize cockerel at the Northern Iowa Poultry Show this last winter with a score of 92½. Mated to him are twelve hens and pullets of fine quality. The farm flock is headed by a first-prize bird at the Rollo show and the hens are high scorers. Mrs. Cobbs also has some fine Mammoth Bronze turkeys, Toulouse geese and Pekin ducks. Prices for eggs are quoted on this page. Write and kindly mention The Homestead.

—"Do as you agree," is the motto that heads the business stationery of Mr. Grant Gallaher, of Spencer, Iowa. This poultry breeder is offering eggs from his flock of big Bronze turkeys, headed by the prize tom at the Northern Iowa poultry show last winter. A common weight for the hens is twenty-three to twenty-eight pounds, so buyers should certainly get heavy birds from these eggs. The flock of giant Barred Rocks is headed by first and second-prize cocks weighing from eleven to thirteen and one-half pounds and females nine to twelve pounds. Markings are correct. Satisfaction is guaranteed. Write today to this breeder. See

# PILES

## FISTULA--NO MONEY TILL CURED

Henry Brunkhorst, General Merchandise, Blackburn, Mo., writes: "March 28, 1902. You cured me years ago of Piles and I am pleased to report that I have no more trouble with rectal trouble you may rest assured I will advise return of my complaint. Should I ever hear of any one suffering with rectal trouble you may rest assured I will advise them to consult you."

All diseases of the rectum treated on a positive guarantee and no money accepted until patient is cured. Send for free 352 page book, a treatise on rectal diseases and hundreds of testimonial letters, valuable to anyone afflicted. Also our 132 page book for women. Both sent free. Address either our St. Louis office or

**DRS. THORNTON & MINOR, 1010 Oak St., KANSAS CITY, MO.**

### IN AND AROUND WISCONSIN.

The first government "automobile" map of any part of Wisconsin will be issued following the completion of the topographical survey of the Sparta and Cross Plains country. This survey has been about two-thirds completed and probably will be finished this coming season. The definite plans for work in Wisconsin have not been fully perfected.

Throughout this section of Wisconsin the tip-top roads will be particularly designated, so that automobilists armed with this map, may choose the best routes.

Fred Pabst, Jr., of Milwaukee, has purchased 121 head of horses, constituting practically the entire Plymouth Hackney stable in Massachusetts, which has been one of the leading breeding establishments in the country, devoted to the production of high-stepping harness horses. The horses will be shipped to Milwaukee immediately.

A large colony of immigrants from Holland are on their way from Europe to Sheboygan. The colony is made up of several hundred people. Sheboygan has had many colonies of Greeks, Austrians, Russians, and Lithuanians in the past few years, but never such a large number at one time from Holland. The Greeks are the best, it is said, of the foregoing colonies which have reached here in recent years, but it is anticipated that the Hollanders will exceed all of them. Work for the immigrants is to be secured in all parts of the city and at the different plants.

What is claimed to be the largest negro in the United States died last week at Appleton, Wis. His weighed 640 pounds and he was said to be gaining a pound a week up to his death. He was only seventeen years old.

According to reports issued by the Western Passenger Association, Wisconsin stands third in the list of states receiving the largest number of immigrants during the last seven years. Minnesota heads the list with nearly eighty thousand and to her credit. Wisconsin took over sixty-six thousand homeseekers from foreign lands.

Wisconsin dairy herds are generally well protected by law from tuberculosis infection from outside the state, but no good laws have been provided to check the spread of this disease from one community to another. Through the efforts of the Agricultural Experiment Station and the state live stock sanitary board a bill has been introduced in the legisla-

ture with this object in mind. It passed the law will require all transfers of stock within the state to be officially tested.

Lodi claims to have one of the most complete and largest tobacco warehouses in the state. The structure was erected by the Lodi Improvement company under a ten year lease to the United Cigar Manufacturers' company, of New York. The structure cost \$30,000. The dimensions of this mammoth building are 90x272 feet, and has a storage capacity of 11,200 cases.

### Some Hints on Saving Young Stock.

To the Editor of The Homestead:

The greatest loss to the live stock interests of the central West, comes during the spring months, when the pregnant females are producing young. Extreme carelessness at this time is the rule, rather than the exception, on a majority of farms. Those who would question this statement, have but to observe closely in their own neighborhood to verify it. In many communities a loss of 40 per cent of the pig crop is not unusual, and the loss in calves and lambs is correspondingly heavy.

This loss is avoidable. It is possible and practicable to save over 95 per cent of the young animals by judicious feeding of the pregnant animals, and by careful management at time of parturition.

It is possible and very desirable to so arrange the breeding of females that are to produce in the spring as to have the young animals come within about a month's time. Because of the lightness of regular farm work in March, and the superior thrift of early born lambs and pigs, this month is most suitable, although somewhat better shelter is required than would be necessary in May.

Pregnant cows, ewes or sows should be kept separate from other stock for the last sixty days in order that they may be fed as their needs require, and that they may not be injured by less quiet animals. Exercise is absolutely necessary. The run of a winter blue-grass pasture suffices for cows, and there are but few days when they cannot run out for four or five hours. Ewes and sows are more sluggish at this time, and must be driven, or induced to take exercise by being fed a noon-day meal some 300 or 400 yards from their regular sheds. This daily exercise keeps the animals in strong, vigorous condition and greatly reduces danger of loss of either ewes or sows.

Feed is given to pregnant animals for two purposes: First, to maintain the animal by supplying the heat and energy needed in the life processes—walking, breathing, eating, digesting and assim-

lating food, maintaining body heat and in the actual work of building the foetus; second, to supply the materials actually used in building up the growing foetus. In other words, we supply food as follows:

First, to maintain life and to hold body weight and to allow for the labor of building up the foetus.

Second, to provide the materials from which the foetus is built.

A mature female does not require expensive protein feeds for her maintenance. We can, therefore, feed her as we would if she were dry, allowing somewhat more liberal amounts to compensate for the energy she is expending in building the foetus.

Common farm feeds—corn fodder, clover hay, sorghum fodder, and corn, barley and some oats—will suffice. Aside from this we must furnish the material which builds the foetus. This must be of special kind, for the growth of the young animal in the uterus, is almost wholly of bone and muscle. Because of this we must feed such bone and muscle-forming feeds as alfalfa and clover hay, and oats, bran, and shorts. Tankage and oil meal are also of value.

Cows—pregnant—will do splendidly on corn fodder and clover hay, and a grain mixture of corn, bran and oats in proportions of one-third each by weight. The roughage may be fed to the limit, the grain need not exceed one-half pound per 100 pounds live weight of animal. Ewes will do well on the same feeds as recommended for cows.

Sows may be fed one-fourth corn, one-half oats, and one-fourth bran and shorts, the last two mixed in equal parts and fed in slop form once a day. The corn and oats should be fed dry. If clover or alfalfa hay is available, the sows should be allowed all they will eat, but the grain ration need not exceed one and one-half pounds per 100 pounds weight of sow. Only such amounts of slop should be fed as will keep the sows in a cool, laxative condition. Excessive slop feeding results in weak pigs. Sows managed as above indicated will not become feverish at farrowing time and kill pigs, as some do.

When parturition time approaches, one man should devote his entire time to the direct care of the pregnant females, and where these exceed fifty in number, two men will find ample work. Breeding records will show when the females are about to produce. Cows can be kept in box stalls in warm quarters. Ewes should be kept in a separate part of the shed, walled off as the lambing room. This can be kept warm with a large stove. For sows a farrowing house and small individual hog houses, afford the best system. The farrowing house should not be expensive. A building thirty-two feet long, twenty-six feet wide, six feet high at sides, and ten or twelve feet high in center, with windows in sides and roof, will allow room for a six-foot alley and two rows of four pens, each 8x10 feet. With cracks battened, and the sides banked up for a couple of feet with manure, a good sized stove in the center will maintain a satisfactory temperature, even during the coldest March storms. In such a building eight farrowing sows can be cared for at once, and it is possible, by grouping together two sows whose pigs are a couple of days old, to take care of ten or twelve sows at one time.

With cows, ewes and sows to look after, and two fires to maintain on cold days and nights, there will be ample work for a man both night and day, and constant attention, especially at night, is necessary for best results. Stalls and pens should be cleaned, disinfected and well bedded after each animal has occupied same, before another is placed in such stall or pen.

In the actual care of the females, experience is necessary, and this can best be gained by working for a time with an experienced man. Cows rarely require assistance, but where labor pains have lasted for two or three hours without result, attention should be given, and knowledge of how to look after this work must be gained by actual experience. Ewes usually come through well, and both lambs and calves should be rubbed partially dry with a wisp of straw, and assisted to rise and suck, care

### Going to School or Learn a Trade?

If so, write for our fine new catalogue giving complete information about the special opportunities offered for obtaining an education in almost any subject and learning some of the best trades. Address O. H. LONGWELL, Pres. Highland Park College, Des Moines, Ia.

being taken to see that the udder of the dam is clean. Little further attention is necessary. Sows that have been properly cared for, usually farrow without trouble, but the herdsman should always be in attendance. A wooden tub, or half barrel with hot bricks in the bottom and some straw and a cloth over these, makes an ideal place to put the young pigs as fast as they are farrowed. A cloth may be thrown partially over the top, to keep in the warmth. Here the young porkers will keep warm, and will dry off. If the sow is not through farrowing in half an hour, let the new born pigs nurse, and restore them to the basket until the farrowing is completed, when the pigs may be left with the sow, care being taken to see that the younger pigs have a fair chance to nurse.

The farrowing pens, lambing pens and calf stalls should all have plenty of sunlight. From the time the pigs are two or three days old, they should be forced to take some exercise in the alley way, and by the time they are a week old, the sow and the pigs may be moved out to the individual hog houses, where they will do well if given clean pens, sunlight and some exercise every day. From this time on the youngsters can be counted on to do well, and the losses will be slight.

The suggestions made are not theoretical, but are based on the practical experience of our most successful stockmen. The most important single point is that of close attention, both night and day, on the part of an experienced man. The extra work so expended will yield more in cash returns than will any other labor exerted on the stock farm, and means stock saving of the most practical kind.

Ames, Iowa. Wayne Dinsmore.

CHEAP RATES TO THE PACIFIC COAST. Commencing March 1st and continuing until April 30th the Iowa Central Railway will have on sale reduced one-way tickets to Arizona, California, Oregon, Washington, British Columbia, Utah, Montana, Idaho and Old Mexico. This is Huttig.

through your dealer, but an ironclad, legally binding guarantee, signed by the HUTTIG MFG. CO., capitalized at \$1,000,000, and responsible for every promise it makes.

No other roofing gives you a personally signed guarantee as strong as this. No other roofing can AFFORD to do so. Why can I do it?

Simply because my roofing is the only roofing on the market, made from pure, natural, imported Asphalt.

Asphalt comes from the Island of Trinidad. A large part of it is used in the exclusive manufacture of HUTTIG'S RUBBER ROOFING.

My roofing is made of long-fibered wool felt, densely compressed and heavily saturated with this specially prepared Natural Trinidad

Asphalt, which protects every particle of fiber. Now, mark this carefully: The saturation of Felt with Asphalt in HUTTIG'S RUBBER ROOFING is 150 per cent as against 104 per cent, the highest saturation of ANY of the roofings with the crazy names.

That's the principal reason why my roofing will not "stick" in the hottest, nor crack in the coldest weather.

HUTTIG'S RUBBER ROOFING requires no skilled labor to lay it. Every roll contains enough liquid cement, nails, caps, etc.

It will not run, rust, rot, crack, leak, blow off, require frequent repairs, and is not a fire trap. Now, here's how I feel about it. If you have use for roofing—

You don't want to fool with a doubtful article, when you can get HUTTIG'S with a guarantee that means absolute protection, both to your roof and to your pocketbook.

Just put the burden on HUTTIG. My shoulders are broad. I will take care of all your roofing troubles, if you will trust me.

Ask your dealer for HUTTIG'S RUBBER ROOFING. If you can't get it of him, ask ME, and I'll see that you do get it.

Anyway, write for a big, free sample of my roofing and let me send you my booklet B and special ironclad Roofing Guarantee. Write me personally, and do it to-day.

**HUTTIG MANUFACTURING CO.,**

# \$1.50 FOR 100 SQUARE FEET STEEL ROOFING

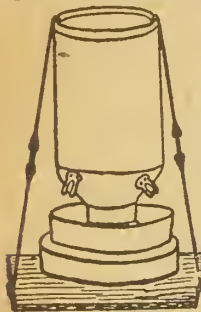

**Over a Million Square Feet at One-Third Reduction. Buy Your Roofing and Building Covering Direct from Us. We Save You Big Money**

Our Steel Roofing is cheapest in price of all steel roofings. It is the most economical in the long run. It is the most durable. It withstands the elements better than any other kind. It is superior in every respect. Stronger, lasts longer, does not become soft in hot weather. Does not crack, dry or rot. Withstands winter storms. Does not soak up. Drains your roof perfectly. Makes it fire proof, lightning proof, water proof. Much cheaper than shingles. Lasts three times as long. Away ahead of slate. Does not break or crack. No tar or patented compounds. It is the ideal roof covering. Prepared roofings are expensive and not satisfactory. Steel roofing does not taint rain water. Makes your building cooler in summer and warmer in winter. Thousands of squares sold every month. Farmers everywhere using it for covering houses, barns, outbuildings of all kinds, storm sheds, poultry houses, hog sheds, etc. Just the thing for elevator siding, stores, churches and buildings of every sort. Easily laid. No special tools required. Hammer and nails, that's all. Absolutely new, fresh from our factory. All ready to put on when received. Can be laid over old roofs.

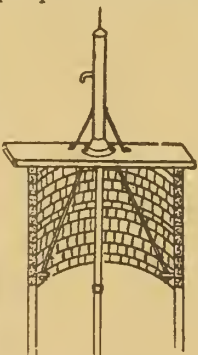

## HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

The following sketch represents a poultry fountain which one of our subscribers finds to be one of the best that he has ever tried. It consists of a large milk can, a wide pan, a flat stone and some hooks and tighteners. All of these are clearly shown in the illustration. To fill the fountain set the can right side up. When filled, place the pan bottom

side up over the top of the can. On this place the flat stone, over which and over all lay the board. Place the hooks and the tighteners in position so that they will hold the whole business in position. The fountain is then reversed and as soon as the pan is partly filled with water the outflow of water from the can should be checked. The advantage of this fountain is that it does not need to be filled often, and in winter the stone may be warmed to keep the water in the tank from freezing. In summer, of course, the flat stone is not essential.

The attached illustration represents the method by which one of our subscribers fastens the pump down to the platform so that the windmill does not move it up and down in a high wind. To carry out this idea the well must be curbed with stone or brick at least a part of its depth down. On opposite sides of the well curb several feet below the platform, pieces of strap iron are inserted into the curbing, leaving a small area exposed, through which a hole is bored to receive one end of a rod, the opposite end of which is bolted to the pump base at the platform.

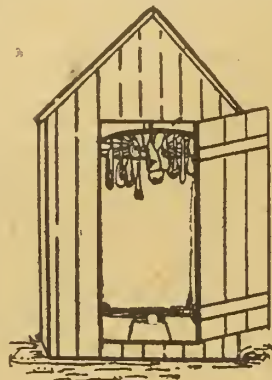

Probably too few people appreciate the value of the salt and tar box for sheep. It is generally known by those who have had experience with sheep that this breed of farm animals are often bothered with grubs which are a certain form of parasite that becomes lodged in the passages of the head and nostrils. In some cases these grubs are found in such large numbers that they almost clog up the passages, and sometimes result in the death of the animal which they afflict. The grub secures entrance to the head through the outside opening of the nostril. A large fly lays the grub egg at the opening of the nostril and in various ways it is worked up into the head where it lodges and develops. The salt and tar box is intended as a preventive against the fly that lays the grub egg. Most any form of a self-feeding salt box may be fitted with the tar addition, which consists of a roll of any coarse absorbent cloth material which can be attached just above the place where the salt comes out of the feeder. If in such a position any sheep that licks salt will rub its muzzle against the tar-soaked material. Sheep will take salt frequently enough to always have sufficient tar odor about their heads to repel any flies that would care to alight on this part of their bodies. Pine tar is

generally used, for the reason that it is more adhesive when once it becomes attached to the animal. It is probable that any tar preparation of a heavy consistency would do just as well. It requires but a few moments to attach this roll of cloth to your salt box, and if you have been troubled with grubs in the flock it will certainly be worth your while to try this idea which Mr. R. E. West, of Polk county, Iowa, sends in.

Those who have a great deal of meat to smoke will find a very handy contrivance in the form of a wheel hung in the top of the smoke house, on which the meat is hung. Use any old buggy or machine wheel that has a large diameter and is sufficiently strong to hold several hundred pounds of meat hung around its circumference. The wheel is left on its axle if possible,

which is firmly attached to the roof of the smoke house, so that the plane of the wheel will be about on a level with one's head and so it can be turned to present any of its sides to the door of the smoke house. All one has to do is to turn the wheel, and in this manner it will be very easy to get at any ham, shoulder or side meat that has been hung. Where the meat is hung on cross beams or around the sides it is often more or less unhandy to find the desired piece. On a wheel there is less opportunity for mice to reach it, at the same time there is also always good light, as the meat is close to the door when it is being examined.

Planting potatoes by hand is slow work, and any device that is practical and can be rigged up on the farm will certainly interest those who have several acres of potatoes to plant the coming season. Such a device is used on a great many farms, though it is probably not nearly as common as it should be. To rig up a planter of this kind the regular corn planter is used or, better still, if any old abandoned frame of a planter with the wheels and shoes still in good shape is at hand it may be used just as well. Spouts two feet long to fit the height of the shoe are made with diameter at the lower end sufficient to allow several small potatoes to pass through without stopping up the opening. At the upper end the spout is six or seven inches in diameter and fits closely to a box in which the prepared seed potatoes are placed. The spouts are attached to the shoe of the planter with leather straps. When ready to plant the operator takes a position on the frame of the planter just above the shoe so that he can use both hands in dropping the seed potatoes into the shoe. If it is desired to plant two rows there may be an operator for each shoe. Boys can do this work just as well as men, and they are not so heavy to haul. It will be seen that it is necessary to have the seed bed in good mellow condition, else the shoes of the planter will not go deep enough to get the seeds under sufficient soil. It requires a good steady team and one that will take a very slow gait, since to drop the potatoes with any degree of uniformity the operator must work very fast. This method of planting potatoes is in practice on a good many farms, and it is certainly a plan well worth trying where

several acres of tubers are put in each season. Two boys and a man can do the work of planting in less than half the time and just as satisfactorily as if furrows were made and the potatoes dropped by hand.

**SETTLERS' RATES TO MINNESOTA, NORTH AND SOUTH DAKOTA AND CANADA.**

On every Tuesday during March and April the Iowa Central will place on sale special second class settlers tickets at extremely low rates for benefit of settlers to the Northwest. Call on agents for rates, or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

**EXCURSION RATE TO PACIFIC COAST.**

Daily during March and April, the Minneapolis & St. Louis R. R. will sell one-way excursion tickets to points in Montana, Idaho,

## \$1.50 Per Square

is price for 100 square feet of our No. 16 grade Flat Semi-hardened Steel Roofing. Each sheet 24 inches wide and 24 inches long. Corrugated roofing like illustration, sheets 22 inches wide and 24 inches long, \$1.75. At 25 cents per square additional we will furnish sheets 6 and 8 feet long. We are headquarters for metal roofing, selling more direct to farmers than all others combined. We have built up an enormous business on steel roofing and siding because we have given prompt and correct service. Thousands of our steel roofs in constant use for years all over the country. Absolutely the longest lived and most practical roof covering made. Inexpensive. Sold in quantities to suit. We can fill your order promptly. Satisfaction guaranteed or money refunded. Dealers get from \$2.25 to \$3.00 per square. Factories add their profits. So do jobbers. You pay all. Save this per cent. Order direct from us. Send us estimate of material of any kind needed in the construction or improvement of your buildings. We can surely help you economize. We make shipments promptly and carefully. No shipments delayed from our end. We have the largest farmers' trade on roofing, siding and building materials in America. We quote lowest prices on roofing, siding eave troughs, down spoutings, etc. **SHREWD BUYERS SEND US YOUR ORDERS.**

## Brick Siding, \$2.00

Just the right thing for stores, houses, churches, barns, hotels, etc. Why not fit up your old building by covering it with bright, fresh brick siding? Easily put on. Made of semi-hardened steel. Looks like brick. No special tools required. Prevents decay. Decreases fire liability. Improves appearance of premises. Adaptable for buildings of all kinds. We sell immense quantities. Gives thorough satisfaction. Comes in sheets 24x38 inches. Has all good points of steel roofing. Remember, you buy direct from our own mill. We are headquarters for brick siding.

## Metal Ceilings, \$2.00

Fine steel beaded ceiling, \$2.00 per 100 square feet. Ideal ceiling for stores, offices, kitchens, restaurants, etc. No falling plaster. Always neat and attractive. Economical and lasting. Furnished ready to put up. No special tools required. Comes in sheets 24 inches by six and eight feet long. Also used for siding.

## We Pay the Freight

to all points east of Colo., except Okla., Texas and Ind. Ter. To these points we pay the freight at 15c per square additional. To all points west of Kansas, we pay the freight at 50c per square additional. Satisfaction guaranteed or money refunded. We will send roofing, siding, ceiling, etc. to anyone answering this ad and mentioning this paper, C. O. D., with privilege of examination, if you will send us 25% of the amount of your order in cash, balance to be paid after material reaches your station. If not found as represented you do not have to take the shipment, and your deposit will be cheerfully refunded.

## Send for Catalog

Ask for our 500-page Catalog No. W. B. 500 free. Full of bargains from cover to cover. Quotes lowest prices on everything needed on the farm and in the home. Contains special bargains on lumber, building supplies, pipe, paints, fencing, doors, windows, cash, heating apparatus, wire nails, tanks, household supplies of all kinds, machinery, furniture of all kinds, waterworks systems, in short, thousands of articles in every day use on the farm and in the home. We guarantee satisfaction on all purchases. Our Capital Stock and Surplus is over One Million Dollars. We refer to any mercantile agency or express company or bank or any business house in Chicago. Fill out and mail us coupon or write us and we will send you our catalog.

## VETERINARY MATTERS.

PROFESSIONAL Veterinary advice through this  
department to regular subscribers only. We do  
not answer veterinary inquiries for the benefit of  
"neighbors." Parties desiring information will be  
required to send their names in full with their ad-  
dress. No question will be answered by mail unless  
accompanied by a fee of one dollar. In order that  
correct information may be given, the symptoms  
should be accurately described, stating of how long  
standing, together with color and age of animal, and  
what treatment, if any, has been resorted to. All vet-  
erinary inquiries should be addressed to this office.

### SYMPTOMS AND TREATMENT.

#### FARCY.

I have a horse whose hind leg began swell-  
ing, then, at the forward part of the ankle  
or hock joint, broke open and matter and  
blood keeps coming out. The flesh seems to  
be crushed and leaving the bone. I thought  
she had been kicked at first, then the front  
leg went the same way. I thought there was  
something in the leg, but there was not. It  
is something new to me, as I have had horses  
for the last fifteen years, but never saw any-  
thing like this before.

This would seem to be a sure enough  
case of farcy, which is the skin form of  
glanders; incurable, malignant, contag-  
ious. According to state law, affected  
horses must be destroyed and the prem-  
ises properly disinfected and the own-  
er receives remuneration (in part) for  
horses killed. The matter should be  
looked into by the state veterinarian,  
as it is his duty to investigate free of  
charge to owner. Meanwhile, notify the  
local health officer as to what we have  
said. If you can have a qualified vet-  
erinarian examine the horse, do so, as  
he may decide that the disease is "cel-  
lulitis" rather than farcy and, in that  
case, state veterinarian would not have  
to be notified.

#### LUMPY JAW.

I have sixteen steers let out to winter.  
Two months ago one swelled under both  
jaws, which I then supposed to be a wen.  
The swelling has since broken and another  
steer is now similarly affected. Also a third  
steer has a small knot coming under upper  
jaw. I regard all three cases as lumpy jaw.  
Please inform me whether lumpy jaw is con-  
tagious and whether the steers affected  
should be separated from the others. What  
treatment would you advise?

Strictly speaking, the disease is not  
contagious, but invasive, and it is not  
usual to separate affected animals. If  
steers are in fit shape for slaughter,  
they should be sold for that purpose,  
as the meat will be sound when disease  
is in first stage and body has in no  
way become emaciated. Treatment con-  
sists in cutting out the diseased cen-  
ters or in splitting them open and in-  
serting corrosive sublimate wrapped in  
wet cotton to cause sloughing. Iodid  
of potash may also be given in one dram  
doses twice daily in water, but this will  
cause emaciation.

#### WORMS.

(1) I have a male hog and two sows.  
The male has been overworked and the  
sows are wormy and run down on corn. I  
am seeking your advice—is venetian red good  
to destroy worms and how much would you  
give? (2) I have a late colt foaled about  
June and the mare was getting very poor,  
so I weaned the colt about September 20th.  
It did fine for a while, but is very poor now  
and is swelled around the mouth. I grease  
it with turpentine and grease, feed oats, corn,  
hay and shredded fodder. It won't eat bran.  
I feed a small amount of oil meal. What  
must I do?

(1) We have no information relative  
to effects of venetian red on worms.  
Readers who have used it for the pur-  
pose are invited to give their experi-  
ence. Better use turpentine as so often  
advised here. (2) Colt may be infested  
with worms. We do not understand  
what is the matter with his mouth, but  
the treatment mentioned will do more  
harm than good. Allow free access to  
a box containing a mixture of four  
parts salt, two parts flowers of sul-  
phur, one part ground gentian root and  
half part dried sulphate of iron.

#### CATARRH.

Will you tell me what is the trouble with  
my sows, and what to do for them? About  
two months ago I bought two sows and they  
began to cough. I thought they had worms  
and treated them with turpentine. They are  
still coughing and breathe hard while lying  
down. They snore. They sneeze and some-  
times their noses bleed. They sneeze often  
and breathe hard. Otherwise are in good  
shape. I feed corn.

If sows are not pregnant give them  
dried sulphate of iron in their food,  
commencing with ten grains twice daily  
and increasing slightly until discharge  
ceases. Sprinkle chlorid of lime in pen  
each morning. Allow plenty of exercise  
each day and feed very light rations,  
without corn. If at all possible, syringe  
nostrils once daily with a mixture of  
one dram of tannic acid in a quart of  
warm water. If sows unfortunately suf-  
fer from "snuffles" (bull nose) they will  
not recover. As there is a possibility  
of latter disease, keep them away from  
other swine.

#### TEETHING TROUBLES.

I have a colt coming three years old in  
the spring. He slobbers so bad that it

# IOWA STOCK FOOD

his first purchase of 100 vaccinations.

## IT'S SAFE, STRONG, SPEEDY, DURABLE

You can break colts easier with this cart. No matter what position  
animal gets in you can dismount instantly.

### CHAMPION CART

Nothing to tangle legs. It's great for road  
use. Absolutely no horse motion. Pleasant  
to ride in. A "hummer" for track use. Seat can  
be adjusted to balance rider thus taking all load  
off the horse. Write quick for free descriptive booklet.

**CHAMPION CART COMPANY, 107 Cavin St., Ligonier, Ind.**

makes him poor. I put him up nights and  
feed him corn, oats and good hay, but no  
clover hay. He eats well, but it does not  
seem to do him any good.

Colt is cutting sixteen new teeth and  
shedding twelve of them, so that he  
cannot masticate properly. It is like-  
ly that milk tooth crowns have failed  
to drop off and a veterinary dentist  
should be called in at once to remove  
them or lance gums over those seen to  
be coming through. Give colt old ear  
corn to chew on, as it helps the teeth  
come through gums.

#### BOG SPAVIN.

I have a four-year-old mare that has  
something like a bog spavin and thoroughpin  
in one hock. About a year and a half ago  
she was kicking in the barn. In a few days  
I noticed her hock swollen. It is not very  
large nor does it lame her any. I doctored  
it a little at the start and it got better. She  
is a valuable mare. Kicking is her worst  
fault. Refused \$200 for her last fall. Please  
give me information as to what to do for  
her.

Give her a box stall when in stable  
and she will be less liable to kick and  
injure her hock. As the swelling does  
not cause lameness, we think it would  
be advisable to let it alone; but if she  
is not pregnant and you are very anx-  
ious to clean up the joint, then re-  
peated blistering may do some good, al-  
though such distensions often prove in-  
curable. A suitable blister would be  
a mixture of one dram each of pow-  
dered cantharides and biniodid of mer-  
cury in an ounce of lard.

#### WARTS.

I have a calf that has large seed warts  
coming on his neck and shoulder, and they  
look very bad. It is catching among the  
other calves. What will I do to get rid of  
them?

The best treatment is to dissect out  
each wart and lightly sear bleeding  
places with a red hot iron. Saturat-  
ing each wart once daily with glacial  
acetic acid, also, will remove them and  
is said that a mixture of one part ord-  
inary baking soda and eight parts lard  
applied daily by rubbing will have the  
same effect. There is very little, if any,  
chance of warts spreading to other cattle.

## Fistula and Poll Evil

Any person, however inexperienced,  
can readily cure either disease with

### Fleming's Fistula and Poll Evil Cure

—even bad old cases that skilled doctors  
have abandoned. Easy and simple; no  
outlay; just a little attention every fifth  
day—and your money refunded if it ever  
fails. Cures most cases within thirty days,  
leaving the horse sound and smooth. All  
particulars given in

## The "STAY THERE"

### Aluminum Ear Markers

are the best. Being made of aluminum they  
are brighter, lighter, stronger and more  
durable than any other. Fit any part of  
the ear. Nothing to catch on feed trough  
or other obstacle. Your name, address and  
any series of numbers on each tag. Sam-  
ple tag, catalogue and prices mailed free.  
Ask for them. Address

**WILCOX & HARVEY MFG. CO.,  
197 Lake St., Chicago, Ill.**

## HOG CHOLERA

CURED and prevented, worms run out and hogs  
made healthy and thrifty in a few days at a  
small expense. Write for book of reliable infor-  
mation on care and treatment of hogs. Also reports of  
public tests. Address,

**Dr. J. H. Snoddy Remedy Co.,  
Box 852, Des Moines, Iowa.**

## ADVERTISING NOTES.

Kherian oats is offered for sale by Messrs. Aye Bros., of Blair, Neb.

Seed corn, sold under the Holden test, is offered for sale by the Gateway Nursery Company, of Le Mars, Iowa.

Mr. L. H. Wright, of Le Mars, Iowa, is offering ginseng plants for sale. His advertisement appears on page 11.

Silk and satin remnants, beautiful pieces in different sizes and colors and squares and corners will be sent to anyone on receipt of price by addressing the Seville Lace Company, West Orange, New Jersey. Mention The Homestead when you write. See page 18.

For \$4,500 cash, the balance on three years' time, you can secure one of the finest 200-acre farms in Henry county, Missouri. The farm is situated near Browningtown, Mo., and is within easy reach of Kansas City markets. Write the Western Stoneware Company, Monmouth, Ill., for a fuller description of this farm and mention this paper.

Owing to the large number of settlers and land seekers who are going into the district west of the Missouri river in North Dakota, land prices have been rapidly advancing. The E. M. Kieron Land Company, of Minneapolis, Minn., own lands there in Morton and Hettinger counties and are offering them in tracts from quarter sections up. See their advertisement on page 28.

Those who have not yet secured a remunerative position for the coming season will do well to write to the World Medical Company, Dept. H. 8, St. Paul, Minn. They are prepared to use a number of good salesmen this summer, selling a nice line of goods. No money is required to start and if you are interested in this line of work see page 21 for their advertisement.

For northern grown Reid's Yellow Dent seed corn we invite our readers to write to Messrs. A. M. Avery & Sons, of Mason City, Iowa. Every purchaser is promised satisfaction or money back. This is a straightforward offer of carefully-selected seed, crated for shipment without loss. Don't neglect to get your order in before their supply is gone. Write today and mention The Homestead. See page 11.

Close connection between the farm and factory is responsible for the low prices which are being quoted on many of the farm implements. It is the plan of present day methods for meeting competition. Extremely low prices are quoted on all the regular farm implements on page 3. You should not fail to investigate this proposition. For further description write to the Hapgood Plow Company, 117 Front St., Alton, Ill. See page 27 for this special offer.

On page 27 an Iowa jeweler is offering to supply each one of the thousands of readers of this paper with a high-grade watch. He claims to carry all the leading makes in stock. All he asks you to do is to write him and give him an opportunity to show you the merits of his goods. He is certainly quoting low prices and he should have no difficulty in disposing of good watches at this price. If you are out of a time piece and intend to buy one, write to Mr. Louis C. Rathbun, of Maynard, Iowa. Kindly mention this paper when writing.

## NEW AND SECOND-HAND TRACTION ENGINES.

A great opportunity is offered to buy a good engine at practically cost-price and ranging in size from eight to fifteen horse power. Some of these are new and others are second hand and are ready for immediate shipment. Write to O. S. Kelley Manufacturing Company, Iowa City, Iowa. Their advertisement appears on page 27, and kindly mention The Homestead when writing.

## INSURE THE CORN CROP.

It doesn't take a hail or wind storm insurance agent to insure the corn crop, neither will a good seed bed insure a maximum crop. Some good, common sense on the part of the farmer in selecting and testing his corn planter will come more nearly insuring a good crop than any other thing which he may do. It matters little how high the corn tests, how favorable the season or how well prepared the seed bed, unless an even stand is secured maximum results will never occur. A cheap corn planter would be expensive as a gift. Of all the farm tools, the corn planter is the one to be selected with the greatest care. The J. I. Case round hole plate runner planter has been developed until it is nothing less than wonderful in its distributing mechanism. You really should see the new model. By actual test, it has distributed 476 kernels without missing or breaking a kernel. This is remarkable. Ask your dealer to show you

one of these planters and remember that it is the J. I. Case planter. If he does not have it, write for free catalog to the J. I. Case Plow Works, Dept. R22, Racine, Wis. See page 10 for their advertisement.

## THIS FARM WILL SELL.

One of the finest farms in the central states is advertised for sale in this issue in the Lands and Homes department. It is located in Jackson county, Missouri, nine miles from Kansas City. Most of it is rich corn land which has been tilled at a cost of \$35 an acre. Think what a fine home such a farm near Kansas City would make. This farm is actually worth \$50 more than the price asked. It consists of 390 acres and is offered for sale by Mr. J. H. Lipscomb, Fidelity Trust Bldg., Kansas City, Mo. Look up the advertisement on page 29 and write him.

## PREPARE FOR THE HAY CROP.

Experience is a wise teacher and those who have hay tools to install in their hay barns should not delay this important matter. When the hay crop is ripe, everything wants to move along smoothly. It is a season when delays are expensive. The Law Manufacturing Company, of St. Paul, Minn., are preparing to furnish you itemized estimates of the cost of a first-class equipment of hay tools in your barn. See their advertisement on page 32 and write them at once.

## FARM AND GARDEN TOOLS AT FACTORY PRICES

generally insures a bargain. Saving money this way is like adding to your bank account. You get exactly the tool which you want and with very little delay. The Greenville Implement Company, Dept. 4, Greenville, Mich., are making special prices now on their fine line of farm and garden tools. You should write them at once for their handsome colored catalog and special free book on gardening. See page 5 for their announcement.

## EVERY ROLL

of Waterproof Rubber Roofing sold by the Farmers' Supply Company, of West Branch, Iowa, is guaranteed. This brand of roof covering is made in three sizes, the one-ply which sells for \$1.35 per hundred feet, the two-ply at \$1.90, and the three-ply at \$2.50. This brand needs no coating and has no sand surface to cover defects. It will stand any climate and it is claimed to cost only one-third as much as shingles considering the difference in lasting quality. Write for samples and address your inquiry to the Farmers' Supply Company, West Branch, Iowa. Mention The Homestead when you write. See page 32 for illustration and particulars.

## MAKE WASHING EASY

by buying the best washing machine on the market that you can find. The old-fashioned way of breaking women's backs over the wash board has largely passed away, thanks to the efforts of inventors and the H. F. Brammer Manufacturing Company, of 1457 Rockingham Road, Davenport, Iowa. They are offering a first-class washer on page 24 of The Homestead. This washer, which is known as the Royal Blue, is very handy to operate, as well as of nice design, and should be a boon to every family who do their own washing. Write today for booklet and valuable suggestions on washing. See page 24 and remember to address them in full as given above.

## LOOKING FOR THE PAINT MAN?

If you are looking for the paint man, right here is where you will find directions to locate him. The paint man to whom we refer is a man who makes paint, instead of using it. He not only makes paint, but sells paint, for he has placed himself under forfeit to sell only high-class paints and oils. The good, old-fashioned paint which we used to see years ago is the kind that this paint man is making. He offers an eight-year guarantee on the paint which he makes, and this is certainly a proposition worth investigating. Before you buy your supply of paint, write to Mr. O. L. Chase, the paint man, Dept. 27, St. Louis, Mo. See page 12 for advertisement.

## BIG SAVING TO FARMERS.

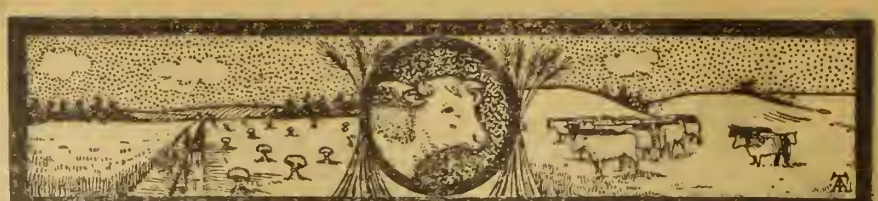

Anyone in need of lumber, pipe, roofing, plumbing supplies or farm machinery of any kind should write at once to St. Louis Wrecking & Supply Co., 3867 Manchester Ave., St. Louis, Mo., and get their prices, as a big saving can be had on these articles. This concern have purchased the Tyrolean Alps, the greatest feature of the World's Fair, and the historic coliseum and music hall which has made St. Louis famous, and have ten million feet of lumber all in first-class condition which can be bought at half price. They have just issued a very complete catalog which they will send postpaid to any of our readers upon request. See advertisement on page 18.

## A BUGGY BARGAIN.

Before we end this little tale we are going to tell our readers just where they can find the description of what is claimed as one of the greatest bargains in buggies that is offered to buyers this season. The buggy is made of first-class material throughout and trimmed in popular colors. It is nicely finished in nickel and leather and is a very fine appearing buggy altogether. Special prices are being made on this buggy for the simple reason that they are being made by an implement factory which at certain seasons of the year can turn these buggies out to keep their force of men at work. For the price and further description see page 23 and note the offer is made by the Hapgood Plow Company, 402 Front St., Alton, Ill.

## NOT RABBIT FENCE.

The Anchor Fence, manufactured by the Anchor Fence Company, of Cleveland, Ohio, is not of the rabbit wire kind. All its horizontal are of large, hard steel coiled spring wire and they are fastened at every intersection to the upright stays so there is no possibility of their slipping. The result is a fence that is strong and tight and maintains its upright character. The wires are heavily galvanized. The coil permits the fence to adjust for extremes in temperature without sagging and breaking. If you need fence a good thing to do is first to write the manufacturers for their free fence book and make a study of the Anchor Fence. When you put up a wire fence get something

# Buy A Combination Farm

HERE is one place where you can buy grazing land for your live stock and irrigated land for farming purposes side by side—That is in Sunny Southern Alberta, Canada.

Just stop and consider the advantages of such an arrangement as that—For farming purposes you have a never failing water supply which insures your crop when you place seed in the soil—You also are assured of having a constant supply of water for your live stock.

On the irrigated portion of your farm you can raise most any kind of grain or root crops—you can raise forage for your live stock.

On the non-irrigated section you will have the finest range for your live stock to be found in the world. The native grasses on the plains of Alberta are rich in the fattening properties so much so that Alberta beef shipped direct from the ranges has come to be considered as fine as the corn fed beef of the States.

Good markets are one of the features of Alberta—the farmer has no difficulty in selling everything he raises at prices as satisfactory, considering

the cost of production, as are to be had anywhere.

Combination farms in the irrigated district of Southern Alberta are to be had at a price so low and on terms so easy that everyone should own a farm. Of course, the irrigated lands cost a little more than the non-irrigated and that is the advantage of being able to get a combination farm. A live stock range can be secured very cheaply, while in other districts where nothing grows on non-irrigated lands the settler must pay high prices for every acre whether he desires to utilize it for live stock raising or not.

The water supply in Canada is unfailing because the government does not authorize the construction of more ditches than there is water to fill, and the heavy water supply comes down from the mountains just at the season of the year when it is most needed, during spring and summer.

Come to Alberta and get a combination farm—we will be glad to tell you about the low prices and easy terms—We will also be glad to tell you how to see the country at very low cost—it is a fine trip. Write us for information and then come up.

## CANADIAN PACIFIC IRRIGATION COLONIZATION CO., Ltd.

71 Ninth Street, West,

Calgary, Alberta, Canada.

Sales Department, Canadian Pacific Railway, Irrigated Lands.

## PILES, FISTULA AND OTHER RECTAL, BOWEL AND STOMACH TROUBLES ARE DANGEROUS IF NEGLECTED

IF YOU ARE AFFLICTED, WRITE AND I WILL TELL YOU HOW TO OBTAIN SUCCESSFUL TREATMENT WITHOUT PAIN.

## ADDRESSES OF A FEW OF MY IOWA PATIENTS CURED.

G. C. Wardfield, Traer, Ia.; Mrs. W. B. McCaul, Villisca, Ia.; A. E. Miller, Vinton, Ia.; Henry Smith, Morning Sun, Ia.; G. A. Wood, Humboldt, Ia.; H. F. Opfer, Waucon, Ia.; W. Smouse, Washington, Ia.; T. O. Williams, Morning Sun, Ia.; T. J. Ochiltree, P. M. Morning Sun, Ia.; Rev. Robert Carroll, Ft. Dodge, Ia.; M. A. Crawford, Clarion, Iowa. BOOKLET SENT FREE.

J. M. AULD, M. D., 80 DEARBORN ST., Dept 11, CHICAGO, ILL.

good and substantial. It is better to do the job so it will last many years. See page 25 for illustration and write for the catalog, kindly mentioning The Homestead.

## PRESS YOUR HAY

with an Ohio self-feed baling press. It is an all-steel frame machine, with a license to last a lifetime. One horse will bale more hay one day on the Ohio than two will bale a machine of less superior make. Start a horse and that is all there is to it. The sweep is a full circle with three strokes to the round. No bridge to stumble over and an extra leverage. You'll want one when you see this year's model. Write for the catalog to the Ohio Cultivator Company, Dept. 13, Bellevue, Ohio.

## STATE LAND SALES.

Mr. Samuel C. Iverson, of St. Paul, Minn., auditor of the state of Minnesota, announces on page 29 of this issue of The Homestead the dates and places at which he will conduct sales of school and other state lands. These dates extend from June 11, 1907, to July 3d, and the sales will include some of the very best lands of the good state of Minnesota. This is a rare opportunity to secure a good home, and, at the same time, make a good investment in lands that are bound to advance in price. These lands will be sold at public auction to the highest bidder. Fifteen per cent of the purchase price must be paid at the time of sale. The balance may run forty years at 4 per cent annual interest if desired. The title to all state lands is perfect. Write Mr. Iverson, St. Paul, Minn., for his valuable book on Minnesota lands, also list of the lands offered at this sale. This is a rare opportunity. Mention The Homestead.

## CURED OF FISTULA WITHOUT LOSS OF TIME FROM BUSINESS.

The Institution of Drs. Thornton & Minor, of Kansas City, Mo., have been curing people afflicted with piles, fistula and other rectal diseases for thirty years. Below we give a letter from one of the most prominent bankers in Missouri. Read it: "Platte City, Mo., April 16, 1902. Drs. Thornton & Minor, Dear Sirs:—I will say, concerning your treatment, there is nothing like it. I can't say enough for you or your treatment. After fifteen years' suffering with the piles and several months with fistula, I was treated twice a week by you, going from my home to Kansas City and returning, never losing time from my business. I was perfectly cured and paid nothing until I was satisfied with the cure. Yours respectfully, C. B. Cockrill, President Exchange Bank." If troubled with any of the above diseases look

up the advertisement of Drs. Thornton & Minor on page 17 and write them.

## SHEEP SHEARING MACHINES.

Everyone who owns sheep in any number will do well to write the Chicago Flexible Shaft Company, 234 Ontario St., Chicago, Ill., for their attractive catalog of modern shearing machines. They advertise a new shearing machine in this issue that in price and quality should appeal to all who are in the market for anything of this kind. This firm now make hand-power shearing machines so well and so low in price that they are rapidly displacing the old hand shears everywhere.

## AN ESSENTIAL IN BREAKING COLTS

is a well-made cart. No matter how bad a horse may cut up, he is no danger of hurting himself or his driver when he is hitched up in a Champion cart, such as is manufactured by the Champion Cart Company, 107 Cavin St., Ligonier, Ind. The cart is fitted with an adjustable seat, which makes it possible to adjust the weight, no matter how heavy the driver. This takes all the load off the horse and makes a very convenient and satisfactory arrangement all around. Write today for free booklet and see page 19 for further details.

## A GARDEN LAND IN KANSAS.

Garden City, Kan., is known to be situated in one of the finest areas of irrigated farm lands in the Southwest. It now offers unexcelled opportunities to those who wish to engage in the culture of sugar beets, alfalfa, fruit, live stock and dairy farming. It is located in an ideal altitude and climate and irrigation resources are inexhaustible. Write for full information regarding this country to Mr. W. McC. E. Rowan, Garden City, Kan., Secretary of Industrial Club. See page 29 for advertisement.

## THE CRUEL TEAMSTER

cares little for the comfort of his team. It probably never occurs to him that his team cannot do their best unless they are in the best of condition. A sore or gall on the shoulder as big as the palm of your hand scarcely attracts his attention until it becomes so large that his horse absolutely refuses to pull. Then it is a rather late time to begin treatment. If any teamster has good common sense and any feelings at all for his team he will see a gall almost as soon as it starts. Just as soon as there appears any small swelling on the face of the shoulder it is likely a gall or blister. Go after it right there. Get a box of Security Gall Salve and apply according to directions. It heals while the horses work. See the advertisement on page 19 and

**Durable Harness**

Your harness will always look well and wear well, and will give double service if treated with

**EUREKA Harness Oil**

Prevents rotting. Gives a glossy black finish. Makes leather soft, strong and durable.

**BOSTON COACH AXLE OIL**

Is the best axle lubricant. Will not gum or corrode. Superior to castor oil and more economical. Sold everywhere—all sizes.

Made by **STANDARD OIL CO.**  
Incorporated

write for a free sample of gall salve, if you cannot obtain it in town, write to the Security Remedy Company, Minneapolis, Minn.

FOR THE RETIRED FARMER

who wishes to utilize spare time by doing some pleasant, remunerative work, there is being offered on page 4 an attractive ginseng proposition. The offer is that of county manager for a company with headquarters in Chicago. Everybody knows that the great tonic properties of this herb have created a wide demand for it ever since the plant has been known. The offer no doubt opens a splendid opportunity to those in a position to accept it. Write today to the Ginseng Tonic Company, 4552 Forestville Ave., Chicago, Ill.

CANNOT PRAISE ABSORBINE ENOUGH.

Mr. W. N. Van Daron, of Handon, Tenn., writes under date of December 26, 1905: "I received your bottle of Absorbine and it has taken the bunch all away. It has helped my horse so much I cannot praise it enough." Absorbine does not blister or remove the hair and horse can be used during treatment. It is a prompt and permanent remedy for removing bunches and blemishes from horses and cattle, allaying pain, healing cuts, overcoming lameness. Get a bottle today, or if you want more information before purchasing, write for Absorbine pamphlet. Absorbine is \$2 per bottle, express prepaid. W. F. Young, P. D. F., 40 Monmouth St., Springfield, Mass.

HOW TO SAVE ON THE COST OF A WATCH.

There are just as many ways of buying a watch as there are makes of watches. On page 22 a plan is given whereby you can buy a first-class Elgin watch and at the same time save the price of what an ordinary watch would cost you. These watches are guaranteed to be first-class in every particular and at the prices quoted are undoubtedly being sold out at wholesale. The company making this offer guarantee their responsibility and are making this low price

for the purpose of introducing their goods. You can order this watch direct from this advertisement if you desire, though if you wish to know more about their great offer write for their big catalog which fully describes many other of their specialties in the line of household articles, etc. Address your inquiry to Herr, Thomas & Co., Dept. 88A, Pittsburg, Pa.

THE PRICE OF A CREAM SEPARATOR largely determines its sale. The price, however, is not always an indication of quality. The Davis Cream Separator, which is being advertised on page 9, are quoting especially attractive prices at present. The construction of this machine is claimed to be far above the price which is asked for it. It is a perfect skimmer, easily cleaned and turns easily. In sending for further information, ask for money-saving catalog No. 118 and address your inquiry to the Davis Cream Separator Company, 54L N. Clinton St., Chicago, Ill. Write them.

THE CLIPPER LAWN MOWER.

Something new in the line of lawn mowers is advertised this week on page 17. The Clipper is manufactured by the Clipper Lawn Mower Company, Dixon, Ill. One needs only to study the illustration appearing in the advertisement to note the several points of merits in its construction. It cuts grass and weeds of any height and leaves a smooth lawn. Another feature deserving of notice is that it does not pull the grass, as is apt to be the case with a rotary mower, especially when the knives become dull. There is a general demand for the "Clipper," which indicates that it is correct in its construction and operation. The company have been flooded with orders and their factory is crowded to its utmost capacity to meet the demand. Full particulars may be obtained by addressing the manufacturers, mentioning this paper.

SOMETHING NEW IN CREAM SEPARATORS.

The Lisle Manufacturing Company, Box 39, Clarinda, Iowa, advertise in this issue something new in the line of cream separators. They are prepared to offer a cash proposition to those who have no agent in their locality and need to buy direct. The claim which they make for their cream separator is that it is the lightest running and most convenient machine up to date; also that there are few parts in its construction, which reduces the liability of breaks. It is to be regarded as a machine of long life, at the same time it is a machine of high efficiency as a saver of cream, as well as strength. For a free catalog and other desirable information regarding this separator, write the above address. See page 9 for advertisement.

STEEL ROOFING AT FACTORY PRICES.

For \$1.50 per 100 square feet the Chicago House Wrecking Company are offering a first-class grade of steel roofing. They have on hand a million square feet of this material, having secured it at bargain prices. They are now giving users of this material the advantage of this great reduction. In buying direct from this company you save a great deal of middlemen's profits. Freight is paid on this material, so you will know when ordering just exactly what the price of it will be at your station. Besides the roofing, they are quoting special prices on brick siding and metal ceiling. Their 500-page catalog No. WB500 is free to those who write for it. It contains a full line of bargains from cover to cover. Among the many thousand things quoted within its covers are a few of the articles advertised on page 18. There you will find a coupon which, if you will fill out correctly and mail, will bring you their catalog.

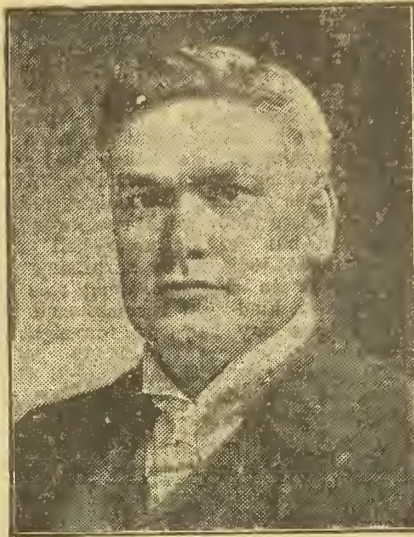

GREAT VEHICLE BOOK FREE.

The Ohio Carriage Manufacturing Company's catalog for this season contains 184 profusely-illustrated pages. All the latest styles of buggies are so perfectly pictured by photographic reproduction that they seem to stand out before you. It should certainly be worth your while to know exactly what materials are used in the making of good buggies; to know what parts are wood, metal or leather. It should also interest you to know what kind of a guarantee goes with a buggy and who stands behind this guarantee. All the vehicles put out by this company are made to stand the hardest kind of usage. In this elaborate catalog will be found a full description of all the points necessary to the knowledge of buggy users. Its pages are filled with information about the Ohio Carriage Manufacturing Company's famous split hickory line, buggies, wagons, phaetons, surreys, carriages, carts and every imaginable style of vehicle. We think we are fully justified in asking every buggy buyer to send for this catalog, as it contains some of the latest and best offerings on the market. See page 12 for the advertisement and address Ohio Carriage Manufacturing Company, Station 31, Cincinnati, Ohio.

THE GREATEST REFRIGERATOR INVENTION OF THE AGE.

What will undoubtedly prove a boon to housewives in the line of a refrigerator which needs no ice is the "Iceless" refrigerator manufactured by an Illinois firm. It is undoubtedly something which will fill a great need, as not every family has the advantage of a good supply of ice for hot weather. It is almost impossible to keep a good supply of food ahead unless there is some means of preventing it from souring or deteriorating during the hot summer months. The housewife that must prepare every meal as it comes must make herself almost a permanent fixture in the kitchen. With a good refrigerator, food can be prepared in amounts that will be sufficient for several meals ahead. With an "Iceless" refrigerator this can be done on any farm now. The refrigerator is simple in its construction and easy to operate. It is made to stand the wear and will keep meat, milk, cream, butter and other edibles in good condition from one day to another. The cost of the Iceless refrigerator is so low that it will undoubtedly keep the manufacturers overtaxed to supply the demand. A free trial is allowed and this way you have an opportunity to become acquainted with the advantages of this new system of keeping food. It is probably one of the greatest

# 30-Days' Catarrh Treatment Free

T. F. WILLIAMS, M. D., Consulting Physician.

JOSEPH ZARN, Harrisburg, Neb., writes: "I am feeling better than I have for years and believe your treatment has cured me. I feel satisfied that I will need no more medicine."

MRS. T. W. SHERIDAN says: "I am so much improved in health that I have decided to discontinue treatment. I think your medicine has accomplished great good and I wish you all the success possible." Mediapolis, Iowa, R. R. No. 3.

I am offering you exactly what I say, a full thirty-days' treatment of your catarrh free; all you need to do is to send me the coupon properly filled out. I know I am able to cure you, for I have in the past twenty years cured thousands of catarrh sufferers and I have testimonials from Maine to California and from the Lakes to the Gulf that tell of my cures. Testimony from grateful patients that will gladly tell you all about their own case and how I cured them. My free offer gives you the opportunity of testing me before you begin to pay for the treatment.

WM. BECKETT, Sbarsburg, Iowa, writes: "I am feeling well and will not need any more medicine. Your medicine certainly has done all you claimed. I will recommend your treatment to other catarrh sufferers."

W. A. DICKEY, Madrid, Ia.: "Both wife and I are doing nicely and feel that we have fully recovered and will not need further treatment. We are very much pleased with the result and thank you for the strict attention you have given us."

FREE TREATMENT COUPON.

DR. T. F. WILLIAMS, 408 Flynn Bldg., Des Moines, Iowa.

Please send me Free Symptom Blanks with a view to my taking your free month's treatment.

NAME .....

ADDRESS .....

household inventions of the age. You may learn all about its construction and efficiency by writing for the illustrated booklet to the Galesburg Cornice Works, 10E Ferris St., Galesburg, Ill. See page 3 for a picture of this refrigerator.

CATARRH TREATMENT ONE MONTH FREE.

Dr. Williams, of Des Moines, Iowa, has from time to time, through the columns of this paper, announced his willingness to send to any of our readers a month's treatment free. He wants to give every sufferer of catarrh of the head, nose, throat, bronchial tubes, stomach, liver, bowels, kidneys and bladder, no matter how chronic the case may be, an opportunity of testing the curative powers of his own private methods of treatment for this dreadful disease, and he makes the public this astonishing offer, to treat free of charge any case of catarrh for one entire month. If you have tried others, and have failed to be benefited after expending a large amount of money, you should see the advantage of trying his treatment under this offer for one month. If you are not benefited to such an extent that you care to continue the treatment until cured, you are under no obligations to do so. Dr. Williams has cured thousands of patients of the very worst cases of Catarrh, and his faith in his own ability to cure is so great that he has no hesitancy in making this liberal offer. Many times one month's treatment alone completes the cure. Address Dr. T. F. Williams, 408 Flynn Building, Des Moines, Iowa, using the coupon found on this page.

GET ALL THE VALUE OUT OF THE MANURE.

The figures on the waste of manure annually are startling. Necessarily the estimates are somewhat in the rough. But if anyone will stop to consider the waste on his own premises, from various causes, he must see that the figures in the aggregate would be appalling. One of the greatest of all the wastes is in the way manure is applied to the land. The common method is to haul it out and either attempt to spread it with a fork at once, or to throw it off in piles and then spread it later on when leisure is found. Just remember that plant life can only take its nourishment in liquid form, and the waste by this method of manuring is apparent. It falls from the fork in piles and lumps. Then it dries and when a rain comes, the fertilizing element is largely washed away. Scarcely half of it enters the soil to enrich it or to nourish immediately the growing plant. Contrast this with spreading manure by machines. Take either the Corn King or the Clover Leaf Manure Spreader manufactured by the International Harvester Company. The spreader tears the manure apart and spreads it thin and evenly. There are no lumps to waste. Every particle of its fertilizing contents is in condition to enter and enrich the soil. The plant roots can lay hold of it at once. The results are immediate. The future benefits to the land are also many fold greater. There is hardly a more useful farm machine today than one of these I. H. C. manure spreaders. They are very similar except in the matter of apron. The Corn King is a return apron; the Clover Leaf is an endless apron spreader. Which one to buy is a matter of personal preference. Local International dealers, who

Porter's "Meadow King" Hay Carrier

Has wide open mouth, with swinging fork pulley. With this Carrier you can fill the mow closer to the roof of barn than with any other Hay Carrier. The throat of the Carrier has a very large opening, which permits the pulley to approach with a swinging load, and the load can swing in either direction when loaded in the Carrier.

J. E. Porter Co., - Ottawa, Ill.

**PATENT YOUR IDEAS**  
\$100,000 for one invention; another \$3,500. Book "How to Obtain a Patent" & "What to Invent" sent free. Send rough sketch for free report as to patentability. We advertise your patent for sale at our expense. Patent Obtained or Fee Returned.  
CHANDLER & CHANDLER, Patent Att'ys,  
956 F. Street, Washington, D. C.

are found in most every town, are able to give the arguments in favor of each, respectively, and to explain fully their other merits. Catalogs and other printed matter may also be had from these agents, giving detailed information. See advertisement on page 11.

HOMES IN THE NORTHWEST.

Why not settle on the government land, of low-price farm lands that are improved, in South Dakota; thus staying near at hand instead of journeying to a distant region where the climatic conditions and social surroundings are widely different? Special low rates are in effect the first and third Tuesdays of each month to all South Dakota stations on the North-Western Line. It will pay you to investigate. New lines are opening up extensive territory to development, creating the chance of a lifetime. Ask your ticket agent to give you full particulars, with maps, pamphlets, and complete information regarding railroad rates and the steps necessary to secure government land free.

## WITH THE EDITOR.

At a luncheon the other day there was a woman—a visiting woman—who made quite an impression. This woman was at such pains to be gracious, she was so anxious to create a good impression, that she over-reached herself. One voted her insincere, another called her a gusher, and no one, I fear, gave her the admiration and regard she so evidently craved.

I keep thinking of this woman. The reason is, she stands for both an "ought" and an "ought not."

It is perfectly legitimate to desire to be well thought of, and it is not only perfectly legitimate, but eminently proper, to say and do gracious things. The sum of the world's happiness depends largely upon these things and it would be immeasurably increased if people would only cultivate love of approbation and the habit of being gracious in the little affairs of every day.

Last week at a study club gathering, the only son of the hostess assisted in serving the refreshments. The little fellow (he was perhaps nine years old) passed teacups and carried cake as nicely as any trained waiter could have done, and all the while he bore himself like a little gentleman. As the club members were making their adieux one of the women said to the hostess, "Your cake is delicious, Mrs. S. I'd like the recipe, but I'd a good deal sooner have your boy. You wouldn't part with him, of course, and I don't wonder. He's a darling, and he surely does credit to your training." The hostess had been looking a trifle fagged and pale, but she flushed and brightened with pleasure, and grasping the speaker's hand, said warmly, "Oh, thank you. I'm so glad to know you like Willis." That evening when her husband asked, "Well, and how did your club meeting come off?" Mrs. S. replied, "Oh, very well, and Willis helped so nicely that Mrs. C. complimented me about him."

Probably every one of the club women that afternoon had noticed the charming behavior of the son of the house, but only one had taken thought that praise of her little lad would be sweet to the mother.

It seems to come natural to some persons to be gracious, but if graciousness is not a natural gift it may be an acquired accomplishment. But here we come back to our starting point. When people cultivate the art of being gracious they often go too far. In the desire to make themselves agreeable by giving pleasure they overdo and become, according to temperament, effusive or insincere.

To be forewarned is to be forearmed. If we who desire to cultivate the grace of graciousness, the habit of saying and

doing little courteous things, will at the same time cultivate sincerity and self-restraint, we may escape both the pitfalls which beset the pathway to our goals.

As I write I find myself picturing a home in which every member of the family strives to seize every opportunity for being gracious, courteous and kind. The picture is so beautiful I feel like suggesting that mother, father and children in the homes of this great Home make a compact to try the experiment for a week. They might begin on Sunday morning and have their first experience meeting Sunday evening. At the experience meeting each might tell, not of successes (they would speak for themselves), but of failures and afterthoughts. It is really surprising when one gets to thinking along this line, how keen hind-sight becomes, and hind-sight one day helps to fore-sight the next.

In connection with the thought of systematic self-culture, three maxims seem worth while quoting; they are:

"What we truly and earnestly desire to be, that in some sense we are."

"The most important of all is the education of the will."

"By persistent labor man may attain to all excellence."

It is evident that we can make ourselves by desire and effort. What we can do, we may do; and in this case, what we may do, we should do.

## HOME AND HOMEMAKING.

## LITTLE HELPS BY THE WAY.

Talk happiness. The world is sad enough. Without your woes. No path is wholly rough. Look for the places that are smooth and clear.

And talk of them to rest the weary ear. Of earth, so hurt by one continuous strain Of human discontent and grief and pain.

Talk faith. The world is better off without Your uttered ignorance and morbid doubt. If you have faith in God, or man, or self, Say so—if not, push back upon the shelf. Of silence all your thoughts, till faith shall come.

No one will grieve because your lips are dumb.

Talk health. The dreary never-ending tale Of mortal maladies is worn and stale. You cannot charm, or interest, or please, By harping on that minor chord, disease. Say you are well, or all is well with you, And God shall hear your words and make them true.

—Ella Wheeler Wilcox.

## HOW MAKE AND KEEP THE FEET BEAUTIFUL.

It is very foolish for a woman to think that she can increase the beauty of her foot by trying to crowd it into a shoe many sizes too small. She only distorts and destroys the curves and outlines that give the foot its beauty. A woman's foot is always in proportion to her size, and for a large woman to try to make her foot appear much smaller than nature intended it to be, is simply to throw it out of harmony with the rest of her physique, and when any part of the body is out of proportion with the rest of it, the beauty of it is destroyed. Low shoes for summer, soft slippers for the house, high shoes for winter. Any one, or all of these, a woman may wear and yet have her feet dressed in a common sense and comfortable manner. I do not think there are many women nowadays who wear thin-soled shoes for outdoor wear. The heavy sole has become very popular and is the only sensible thing for general wear. It is a foolish

## Cancer Cured at Home

I have so perfected my Mild Combination Treatment that patients may use it at their home with as good results as though it were applied at my offices. I will gladly furnish to every sufferer positive and indisputable proofs that my treatment **does cure Cancer**. I will furnish ample evidence of my integrity, honesty and financial and professional ability. No matter how serious your case may be—no matter how many operations you have had—no matter what treatments you have tried—write for my book, "Cancer and Its Cure." It will cost you nothing and will tell you how you can be cured at home. Address,

**DR. O. A. JOHNSON, SUITE 371, 1233 GRAND AVE. Kansas City, Mo.**

Have you a friend suffering from Cancer? Do them a favor they'll never forget by sending them this ad

woman who will venture out in rainy weather with her feet poorly clad.

Woman do not walk as much as they should. This is largely because they do not wear a practical shoe and walking is made painful by bunions, corns, etc. With the feet free from blemishes and clad in comfortable shoes a long walk in the country, a ramble in the woods, would not only be an enjoyable outing, but would cause one to breathe the fresh air, bring into play the muscles, stir up the dormant circulation, invigorate the brain, bring the glow of health and vigor.

Sunshine is the constant demonstration in our own every-day living, of that love for our fellow-men that will make the world brighter for ourselves and others. That love that will continually shine in kind words and loving deeds for others. That love that compels us to rejoice with them that rejoice and weep with those who mourn.

We often do more good by our sympathy than by our labors, and render to the world a more lasting service by absence of jealousy and recognition of merit than we could ever render by the straining efforts of personal ambition.—Dean Farrar.

## SIMPLIFIED SPELLING.

Speaking of phonetic spelling, we certainly need it, from this story:

Little Willie came home from school one afternoon, crying, and on being asked by his mother the cause, he told her that he had missed a word in spelling and had been whipped by his teacher.

On being asked what the word was and how he spelled it, Willie told her the word was pneumonia and that he had spelled it n-e-u-m-o-n-i-a.

The next day Willie came home crying even harder than the day before.

His mother, asking the cause, was informed that Willie had missed another word in spelling, and had been whipped for his mistake.

He told his mother that the word he missed was neuralgia, and that he spelled it p-n-e-u-r-a-l-g-i-a.—Judge.

## THE HUNGRY CROCODILE.

Upon a little dinky,

A-swimming in the Nile,

Appeared quite unexpectedly,

A hungry crocodile,

Who, with that fierce politeness

That makes the warm blood freeze,

Remarked, "I'll have some dark meat,

Without dressing, if you please."

—Selected.

## FOR THE COOK.

Vienna Chocolate—Put into a double boiler one or one and a half scant quarts milk and heat nearly to the boiling point. Cut four ounces chocolate in fine bits and put into a small granite ware or iron saucepan with a level salt spoonful salt, two tablespoonfuls sugar and two tablespoonfuls hot water. Cook until smooth and shiny and do not be afraid of cooking too long. Now whisk into the hot milk, beating lightly with a Dover egg beater. Flavor with vanilla or cinnamon and serve at once, putting a tablespoonful whipped cream in each cup and filling up with chocolate. Cooking the chocolate in this way prevents it from settling in the cups and does away with the greasy taste that many object to.

Baked Eggs—Break the required number into a shallow baking pan; season with salt, pepper and small bits of butter dropped around over them and pour over the whole a cup of good, rich cream. Put in a very hot

oven and bake until they begin to turn white on top. Eggs cooked in this way are very delicate and different in flavor from the ordinary.

Beef a la Mode—Among the good, plain and wholesome dishes with which we may stay our souls an occasional dish of beef a la mode is not to be despised. To make it, procure a nice thick piece of beef from the rump, weighing about five pounds. Chop fine a stalk of parsley and one onion, and add a tablespoonful of salt and a teaspoonful of pepper. Cut three ounces larding pork and four ounces raw ham into finger-thick strips, and with a sharp pointed knife make incisions in the meat an inch apart. Roll the pork and ham in the seasoning, then insert the strips alternately into the incisions. Make the meat round and fasten securely with string. Put into the bottom of an iron saucepan three thin slices of larding pork and a quarter pound of raw ham, then three onions (sliced), two carrots and a small bouquet of soup herbs. Place the meat on top of this, then add sufficient stock or broth to reach half way up the meat. Cover with buttered paper, put on the lid and simmer gently three and a half or four hours. When tender remove the strings, trim neatly and lay on a hot dish. Skim the liquor in the kettle and free from fat, using a piece of brown paper to absorb all that cannot be poured off. Put into a saucepan a tablespoonful each of butter and flour, and when frothy add two cups of the strained broth and cook until thickened slightly and smooth. Pour a little of this sauce over the meat, which should be arranged on a hot platter, and garnish with boiled potatoes put through a ricer into little mounds, carrot balls and small white glazed onions. Serve the remainder of the sauce in the sauceboat.

Dried Beef—Cut a round of beef into four pieces—after it has thoroughly cooled after killing—and rub each piece all over lightly with salt and let it remain a day. Make a brine of one gallon water, half pound of brown sugar, a teaspoonful of powdered salt-peter, and salt enough to float an egg. Put meat in this brine and turn it every other day for eight days. Then hang the meat in a cool, dry place. Can be used when dry enough to eat. Smoking will spoil flavor.

Country Sausage—Six pounds of lean pork, three pounds of chine fat, three tablespoonfuls salt, two tablespoonfuls of black pepper, four of pounded and sifted sage, and two of summer savory. Chop lean and fat pork fine, mix seasoning in with your hands. By tasting you may decide to change the flavor by adding more of this or that. Pack in hog casings or else make casings out of stont muslin. Dip in melted lard and hang in a cool, dark, dry place. If preferred, the sausage can be packed in jars and melted lard poured over the top.

## AMONG OURSELVES.

At last a man has arisen to give us his experience regarding the marriage of men and women differing widely in age. Farmer Bill would seem qualified to speak on matrimony, for he has married three times; twice, women very much younger than he, as you will hear:

My wife and I have been reading in Among Ourselves the subject, "Disparity of Age," from June Bug's letter down to the present time. You say the discussion is closed unless some belated man rises to tell how he has gotten along with a partner a good many years his junior. My experience might go a long way to solve the question about difference in ages. Now,

**Costs You Nothing if You Are Not Satisfied**

**20 Year Guaranteed Gold Filled Chased Case**

I like Sunny Jim's Wife's letter and what she says in regard to the only reasons for marriage. There is only one—love. A motive which when sanctified by a desire and a resolution to improve and elevate each other and to live true and holy lives before God, cannot fail to bring down the blessings of Heaven. I have been married three times, and I find where this motive is acted upon, there you will find a happy home. I was married when I was twenty-nine years old, the age Sunny Jim's wife says a man or boy begins to know something. My partner was a society belle twenty-three years of age. We started to live the simple life on the farm. She was happy in her husband's love and the home she was helping him to make. Society had no charms compared to her home. The blessings of Heaven seemed to be showered upon us, for we soon had the old farm paid for and a beautiful home started on the banks of a lake that bounded the place, but sickness and death came before it was finished. A few moments before the end came she asked me to hold her in my arms. I picked her up as a child and as she pillowed her head on my breast her last words were a blessing for my kindness. This was the end of sixteen years of happiness. We had no children and for a long while I was all broke up. I could not go back and look over the old farm house her hands had made beautiful while living. The house at the lake was rented as a summer resort and I went there to board for two seasons. There was an assistant cook, a girl I took to be nineteen years of age, who would bring a lunch out into the hay field and at the table she would see that I always had the best. She knew the way to a man's heart was through his stomach. When the lease of rent was thrown up we were married and went to keeping house. After we were married she told me she was only seventeen years old, just out of school. Now, June Bug, I want to call your attention to this fact, that difference don't cut any figure if a married woman wants her sparking days and can find more pleasure in other company than her husband's. Circumstances alter cases, as Mrs. Violet says. There was a difference of twenty-nine years in this marriage. We had two children and were happy until she went out into society. Then trouble and divorce. I made a third venture on the sea of matrimony. This time there is a difference of thirty-three years in our ages, but my wife never thinks of this. She is happy in the thought that I love her and the little baby girl she bore me. Her love for me is not only told to me, but shown by actions, which speak louder than words. As I return from my work how pleasant to look up to the window and see two faces anxious for papa's return. I always kiss my wife and baby every time I go out to my work. We are living the simple life, which is the happiest, out on the farm, happy in each other's love, happy in the home and little Rosebud who makes that home more beautiful. We agree with President Roosevelt that just as the highest work for the normal man is work for his wife and children, so the highest work of the normal woman is the work of the home. This advice means living near to God's laws. My advice to all young ladies who contemplate marriage is to consider not the difference in age or

the beautiful home a man may give you, but his character, which should rule supreme. Go to him in truth and righteousness. Gentleness and love will win his confidence and love and as you value your future happiness don't betray it. Morality and character must be with you and back of your married life. Character includes truth, righteousness, gentleness and love. Your marriage will not be a failure if these rules are lived up to, for it is these characteristics that go to make up the perfect life.

Farmer Bill sent a photograph of himself and wife and baby; it is a pleasant looking group and his letter would indicate that he is a kind-hearted, considerate husband, but would a jury consider his story evidence for or against the case, I wonder? If we could hear from Wife Number 2 it would be interesting, and if we could hear from Wife Number 3, say in five years, that would also be interesting. As a man grows older if he improves himself he should become increasingly attractive and he should have no trouble in winning a woman younger than himself; the trouble is apt to be the holding of her. It is unnatural for a young girl to be content to "settle down" to the steady diet of home-keeping which a man up in years usually desires; occasionally such an experiment may turn out well, but it only goes to show that exceptions prove the rule.

Mrs. Maggie V. Camden has something to say which fits in here:

Among Ourselves is a good place to have scraps, but we are so far apart I guess there is no danger, so will add my scrap, which will be a combination of scraps. In the first place don't tell the girls to marry for love and nothing else. In some it works all right, but more often it don't. When young, love is all we think about, and we overlook all bad habits before marriage, but after marriage things take a different course. Those bad habits don't stop after you are married. Then the trouble begins. That love sours somewhat when we see the man we married for love and love only come home in such a shape that we must turn our heads in disgust. Drink is a good love killer. If I had a daughter I would say marry for money, then you will have something to fall back on, but get a good man. And girls, don't marry an old man thinking it will be your last chance. Wait a while and see. Better never marry than to have a family of little ones and an old man to care for. Married life is long, but single life is short, so don't be in a hurry.

Although women have said somewhat upon this subject I shall give Mrs. Jones the privilege of a word or two:

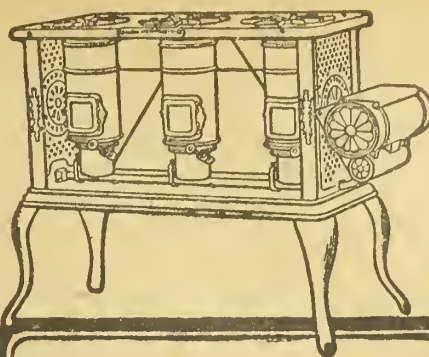

If all a woman cares for is to slave for her husband and cast duty to the children aside, let her marry the man as old as she likes. If she wants a true sympathizer and companion in the full sense of the word and someone to be her escort to church; lectures or fairs, then take someone nearly her own age, two or four years older at most. If you want any happiness don't marry a man unless he truly loves you, no matter if you worship him. A cold look and cross words when your heart aches for a carefree time after time will soon lessen your worship. So consider all things before marriage and after make the best of things and ask God to help you bear your trials. Be as pleasant and kind as possible doing your duty, whether he does or not.

This discussion serves to bring out the fact that marriage is a very serious contract. This is well. And as thoughts of love come with spring-time it is to be hoped that some of our readers have been helpfully served by what has been said. By the way, won't some one who has given a pretty home wedding write about it for the benefit of the circle within the next few weeks?

Mr. G. Lawrence has something for us which will entertain the men especially:

The clipping in issue of February 28th in which we, the husbands on the farm, stand charged with such extreme neglect of personal cleanliness, of table manners, of consideration for the wife and children and the many other minor faults mentioned therein, is too utterly absurd and one-sided to deserve notice. But since the charge is made against only farmers as a class, I wish to enter on behalf of the farmers' wives' husbands a plea of "not guilty," and the burden of proof rests upon the author of the article. There are rare exceptions where a farmer may be found to fit the case, but the same is true of men in other walks of life, and sad, but true, it may be said of some women that the shoe would fit. The man or woman who ever possessed that quality called pride never quite loses it after marriage. One may easily mistake foppishness in a young man for pride, and pride in the young lady is too often nothing but a love of dress, with an indulgent father perhaps to foot the bills. In one, as well as the other, the wearing qualities of the pride are about like those of fire gilt jewelry—the pride (?) soon goes. Men cannot all be merchants, or doctors, or teachers, or lawyers. Some must till the soil and do many other kinds of labor in which good clothes would last about as long as a snow ball in a furnace, and the woman who loves a man for his many manly virtues and not for his clothes or his money, will see in the horny-handed son of toil, in spite of common clothes and sun-browned face, "a man for a' that."

That is a very apt figure Mr. G. Lawrence uses to illustrate the futility of wearing good clothes while doing certain kinds of work; all that he says is marked by good sense, but is he not

begging the question just a little? Some farmers are as careful about cleanliness and a good appearance when work is done as any men anywhere, but are farmers as a class as particular as they might be? While at work men should wear suitable clothing and due allowance should be made for rest time when it is a luxury to lie around in dishabille, but is there any excuse for a man tumbling into bed without bathing and refusing to remove the underwear worn while working? And why should a farmer go to town, as some do, looking like an old tramp? I myself have seen, on the same wagon, a neatly dressed woman and a man beside whom no self-respecting woman could sit with pleasure. It was against this sort of thing I fancy that our correspondent of a few weeks ago entered a protest. It might be illuminating if some of the men who indulge in the habits referred to would let us hear from them. I wish they would.

Mrs. S. E. O. comes with a good word for us:

Last summer at Chautauqua, a lecture given by Dr. Matt Hughes, of Kansas City, contained the following. In speaking of the newspaper and the thing that takes, he said, "Goodness is not news." One may have the qualities of a saint and he ever so virtuous; that is not news. But let one step aside from the path of right, do something really shocking—that is what the papers have for news. The thought is on the same line as that expressed by one Among Ourselves not long ago in regard to scandal. The majority of readers must prefer that sort of fare dished up or there would be a different kind served. I believe we can remedy this if we each one resolve that we will neither give ear nor eye to that which is not up to the mark. There is one more thought presented by Mrs. Custer County. How shall we keep our boys from the Sunday hall game? She

would like an answer from the fathers, but I am the mother of quite a family and know whereof I speak. My friend, if you and Mr. Custer County are compelled to stay at home on the Sabbath and rest, and your boys consider themselves too old now to attend Sunday school, I am afraid there is no remedy to keep them from the Sunday hall game or any other place they wish to go.

It is good to hear from both the fathers and the mothers on matters that pertain to the children. Let us listen to a word from Mr. C. E. K., who has decided views on the subject of Sunday base-ball:

What shall our boys do on Sunday? This

question appeals to me as a father. I want my boy to grow up to be an honest, God-fearing man, one who observes the Sabbath in its best sense and has reverence for God's word. But can I expect it if I am too tired or too careless when Sunday comes to attend the church services myself? "Like father, like son." I believe in heredity in religion, as well as in other lines, and we that have descended from the old Puritan stock have inherited a reverence for the Sabbath that is above Sunday picnics, ball-games, etc. I try to be a companion to my boy and try to impress on him the fact that the best people do not desecrate the Sabbath. "Cleanliness is next to Godliness," and when Sunday comes I believe a man should observe it first by being clean, well shaven and well dressed, and then attend church services, both preaching and Sunday school. During the afternoon either good, wholesome reading or a walk through the fields with the children is helpful and restful.

As a rule fathers would like their lads to grow up "honest, God-fearing men." They know that such children will never bring shame upon their parents and are likely to make a success of life, but sometimes the father counts it too much trouble to lead the way. Such men need the lesson taught a man who had only one son, a lovable little lad whom he secretly adored. One day this man took his son to a restaurant, and to please the lad allowed him to order his own dinner. The boy picked and chose without any trouble until it came to something to drink; the wine list confused him then and turning to the waiter he said: "I'll take whatever my father takes to drink." The boy's words pierced the father's heart like a dart; he promptly countermanded his order for wine and from that time became a total abstainer.

Mrs. Viola has a story for us which those who think of adopting a child will read with special interest:

As no one has made a reply to "A Foster Mother" who wrote for our department some time ago, I feel that I must give my own experience, and perhaps save someone else from making the same mistake we did. We adopted a boy when he was a tiny baby. We thought it would be better not to tell him that he was not our own child until he was old enough to understand. We went far from our old home, among strangers, and thought our secret was safe. But not so. A friend came to visit us and told our boy

we were not his parents. He was just at the age when it is hardest to control a boy. I could not if I would, and I would not if I could, tell of the heartaches that followed. I would only say if you adopt a child don't keep the fact from them, for someone will tell them. It might be all right with some natures, but with others they would rebel just as our boy did. God only knows how we had loved, prayed and worked for him.

One wonders if the heart of Mrs. Viola and her husband is more sad than that of fathers and mothers who have been disappointed by children of their bodies. One wonders, too, if it be not always better to frankly tell an adopted child the truth rather than rear it in a belief which may be rudely shattered at any time. Opinions upon this subject would doubtless interest many Among Our-elves.

With a word about canned meat for summer use from "A Busy One" we shall adjourn:

I wonder how many of the sisters can meat for summer use. It is such a blessing to be able to run down cellar and get a can of meat. One can just put it in the reservoir a few minutes and it will come out of the can easily. We cut meat as for steak, lay it in layers and season with pepper and salt just as if you were going to cook it and then cut in pieces just small enough to put in your Mason jars; seal and boil in the boiler. Any nice meat is all right for canning and one can use the bones for soups during cold weather. If company drops in unexpectedly or you are extra busy it saves worry and fuss.

#### Dressmaking and Millinery, No. 563.

Sylvia Silverthorne, Muscatine, Iowa.

[All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of the paper nor to the editor of the Home Department.]

Some of the noticeable trimming features of the season's separate skirts are so ample and yet so effective and easily copied that it is worth while mentioning them. As you have noted in many of the skirt designs there is a panel effect between the smaller pleats. Bias pieces of the material or of silk two or more inches in width, or I may say in graduated widths where two or more are used, are cut in lengths that reach nearly across the width of the pleat or panel, these being stitched to the skirt at the top edge only. The ends and lower edge are hemmed or simply turned over and stitched, or all the

### Buffalo Calf Shoes

Stand Hard Knocks and Wear Long-est

Write us a postal. We'll send you a sample "Buffalo Calf" leather tag. Then try to tear it. Bend it to see how flexible it is. Ask your dealer to show you a pair of our "Buffalo Calf" Shoes, and test them on your feet. See how comfortable they are. Made on the General Durability Principle—for men who have to give their shoes hard usage. Yet they are good shape and popular for every-day wear. We make them Out West here. We know they are good. Thousands of practical men are wearing them and know too. Try a pair yourself. If your dealer doesn't happen to carry "Buffalo Calf" Shoes, write us direct. We'll tell you how to get a pair promptly. Be sure to ask your dealer, or test the leather yourself by writing a postal card for a sample tag today. It will interest you to get one of these REAL leather tags.

**Bentley & Olmsted Company**  
"The Western People" Des Moines, Iowa

### The Iowa Gate

—FOR THE FARM—

By sliding this ring back the largest hogs may pass under

AND have the run of two lots. Or raise your gate to drive hogs through, then your larger stock cannot get out. **RAISING THE GATE** is simple enough but very handy your gate swings on uneven ground or when the outer end drags. **IOWA GATES** will raise up for winter use—are not bothered by wind, rot, or fire. Are easy for women to handle but strong enough for any attack.

**CHEAPER THAN WOODEN GATES** and will outlast a dozen. Write today for our circular.

**IOWA GATE CO.** 9TH ST. CEDAR FALLS, IOWA

[5600 Fancy Blouse, 32 to 40 Bust.]

edges are piped. One or several bias bands are frequently put quite around the skirt some inches from the bottom, these being attached only at the top edge. This mode of trimming, in bands of silk, is one of the best on the chiffon panamas and the volles that are usually made up over linings of silk. And speaking of linings leads to the suggestion that oftentimes these sheer fabrics in black or in colors are lined with plaid or striped silk or one of its good imitations. If the dress material is in a color the dominant tone in the plaid or striped lining should harmonize with it. Then, too, it is safe to select the silk that is to be used for trimming in the self tone, lest in combining there might be a lack of harmony.

No. 5600 is an extremely attractive design in a fancy blouse, and a careful study of the illustration will show you its possibilities whether an elaborate or a simple development is desired. In the design or pattern there are graduated pleats that extend from shoulder to waist line at front and back. These may be left plain. As pictured, embroidery done on the material trims the pleats, as it does also those on the sleeves. Embroidery also edges the V-shaped opening at front and back. Frills of the material edge all these pleats, but only part of their length, this mode of "frilling" being an especial feature of the season's decoration. I have taken up this subject at some length in a former paper, so I need only repeat here that the frills may be of the material, of lace or of embroidery. Silk is frequently used for these on a waist or other material. Notice that the ends of these frillings are graduated to a point where they are joined to the pleats. The chemise of lace or net should have a lining of chiffon or very

thin silk. The pattern provides for a lining. This may be used or omitted, much in this matter depending on the material of the garment. Pattern No. 5600 is cut in sizes for a 32, 34, 36, 38 and 40 inch bust measure. Give size when ordering.

The sailor blouse costume seems never to lose favor, as it is as high in favor this season as ever, and few girls will complete their spring wardrobe without a suit made on its pleasing lines. The design No. 5597 is simple and yet with possibilities of elaboration, either in the materials or the manner of its makeup. In wool with a contrasting collar of silk, all-over embroidery

[5597 Girl's Blouse Costume, 6 to 12 Years.]

or lace, or having the collar elaborately braided it becomes a very dressy affair, while for general wear the gingham and similar materials develop pleasingly. The skirt is joined to a plain waist that serves as a lining. On this the shield is faced. The waist closes at the front and is adjusted at the bottom by means of elastic cord. Pattern No. 5597 is cut in sizes for girls of 6, 8, 10 and 12 years of

## MAYER

# MARTHA WASHINGTON

## COMFORT SHOES

are designed for extreme comfort and can be worn all the year round. They fit like a glove and feel easy on the feet. The elastic at the sides stretches with every motion of the foot, making it impossible to pinch or squeeze. No buttons to button, no laces to lace—They just slip on and off without trouble.

Made of Vici Kid, with patent leather trimmings and flexible soles.

Your dealer will supply you; if not, write to us. Look for **Martha Washington** name and Mayer trade-mark stamped on the sole. We also make Western Lady shoes

**FREE** Send us the name of a dealer who does not handle Martha Washington shoes and we will send you free, postpaid, a beautiful picture of Martha Washington, size 15 x 20.

age. Give age when ordering patterns. Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

#### A STANDARD GALLON OF PAINT.

Did you ever stop to think that Uncle Sam has set the standard measure for a gallon and did it ever come to you that not every gallon of paint which is sold might come up to this standard? There are a great many ways of taking advantage of the paint buyer and one of these is in selling him a gallon of paint which is actually less than the gallon sold by some other company. The Lowe Bros. Company, 450-456 Third St., Dayton, Ohio, are paint makers of long experience. They guarantee that every gallon of paint which they sell is up to the required standard of measure. Accordingly they have labeled their paint the "High Standard." The results which it gives warrant fully the use of this name. In buying paints for your spring painting, look for "High Standard" on the paint can. It is a guarantee of high quality. Read what this company say about paints on page 4 and it will undoubtedly be to your profit.

## PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range  
Among the pleasant fields of Holy Writ  
I might despair.  
—Tennyson.

### The International Sunday-School Lesson.

Second Quarter. Lesson I. Genesis XXVIII, 1-5, 10-22 April 7, 1907.

#### Jacob's Vision and God's Promise.

Esau's prowess could easily undo Jacob's plotting. Mother and son seem not to have duly appreciated the risk of exciting the rage of the hunter used to striking deadly blows. The Edomite, like another elder brother, and with more cause than he, was at once inflamed with murderous enmity. The mother's wit was not long in scenting the danger, and she bade her favorite fly. . . . Jacob was heir apparent to the chieftainship of a tribe growing with phenomenal rapidity; the successor of a vast Oriental estate; but he must needs take his departure in the most ignominious plight; no caravan or escort; not so much as a single servant; nothing but

the stick in his hand. Out he goes, a shelterless fugitive, a tramp, with four hundred and fifty miles and forty years of exile ahead of him. The odds seem against him; for he has been enervated by tent-life, while his pursuer is used to chasing game. One cannot but contrast the grandson's sorry exit with the grandfather's happy and stately entrance to that land. . . . The man who was so used to the sweets of domesticity was getting further and further from home, his sorrows increasing all the way. He must needs keep far from the dwellings of men. He starts at every sight and sound. Bitter are his tears, fervent are his prayers. But the Lord delays his coming, as He did to His disciples, storm-tossed on Gennesaret. For two nights, probably, the fugitive must lie down in the gloaming uncomfortable. . . . On the evening of the third day (probably) Jacob lighted on (literally) the place—likely one of his grandfather's camping places. The very sight of the altar may have strengthened his faith. Doubtless he began there the wrestling which made him Israel forty years later at the Jabbok. The kingdom of heaven suffered violence that night as Jacob laid his head on a stone from Abraham's altar. . . . The last object left on the dimming vision of the patriarch may have been the jagged staircase, the receding rock ledges opposite, and faintly revealed in the starlight. In his dream the steps rise to heaven, are illuminated by an unearthly radiance, and peopled by angel forms. But all this is but by way of approach to the ineffable person of Jehovah, who stands above it. . . . The mere vision would have been indescribably comforting, but the spoken word is added. The fugitive is assured that the very ground on which he lies he shall possess; and that his progeny shall be so numerous that they cannot be confined in narrow limits, but shall break out toward the four points of the compass. Jehovah's protective company is assured. . . . Jacob, on waking, cries: "Jehovah was here, though I had forfeited all claim upon Him, and had no right to expect His coming." A holy awe fills the dreamer's soul. He cries again: "Why, this lonely place proved the very portal to Jehovah's palace!" . . . He converts his pillow into a pillar, and makes an oblation upon it from his scanty cruse. He names the place "House of God." He enters into a sacred treaty of reciprocity. "Since God has made his assuring promises, I will make mine. This spot shall be a permanent place of worship, and I will tithe my income."

#### Analysis and Key.

1. Possibility and danger of Esau's rage overlooked. Mother advises flight.
2. Jacob's exit in contrast to Abraham's entrance.
3. Jacob's fear and loneliness.
4. Camps on the third night at "The Place." Site of Abraham's altar (probably). Religious impressions of place. Faith and prayer.
5. Last object on Jacob's closing eye. Jagged staircase of receding rocky ledges. The ladder of the dream.
6. Jehovah: protective company assured by dream.
7. Jacob's gratitude. Sign of pillar and oblation. Promise of dedication of site and tithing of income.

#### The Teacher's Lantern.

The story of Jacob puts no premium on craft in the management of one's affairs. "The Lord used Jacob for holy purposes"—yes; but in spite of his despicable conduct, not because of it. The seal of Divine disapproval is clearly affixed. Those who think chicane—a little of it, at least—indispensable to success, find no comfort or justification in this instance.

Jacob was terribly punished. He was separated forever from his doting mother; was exiled forty years; got paid back in his own coin, with compounded interest. As he practiced a fraud to get a blessing, so Laban practiced one on him to withhold the woman he loved. Great are the advantages of solitude.

## Examine Fence Carefully

before you buy it and see whether the stays are made of *whole wire* or short pieces. It makes a big difference in the strength of the fence and as the *whole wire* fence costs you no more, and is fully twice as strong, why buy the other? Our stay wire is continuous—one piece running continuously up and down across the fence without an end for many rods. Thus we preserve and utilize *all* the strength and service there is in the wire, fully half of which is wasted in cut stay fences—sacrificed to convenience and speed in manufacture. Our method of weaving is a little slower and costs us a trifle more, but it's worth while—it's the only correct way of weaving a fence.

**30 days approval.** But why argue and hesitate? Let us ship you what fence, etc. you need on 30 days approval. We want you to examine and test it. We want to show you the difference between ours—the best made fence on earth, and the other fences that are being offered to you. During the 30 days you can test it thoroughly. You can put up a part of it or all of it and turn your stock against it. Give it any kind of a test you wish. After examining it and comparing its construction with others we will gladly let you be the judge. If you don't like it, send the whole business back and it won't cost you a cent as we will pay freight both ways and refund every cent you paid. 17 years experience with this kind of fence gives us the confidence to make this offer.

We prepay freight to any steam railroad station in the United States on 40 rods or more and guarantee the safe delivery of your shipment. Our free Fence Book tells all about Advance Fence. Let us send it to you with freight paid prices on our line.

### THE "DENNING" FENCING IS FAMOUS

For its "Peerless Tie" close mesh, strength and durability. Our motto is "not how cheap but how good." Yet our prices are as low as any compared with weight. We use the best **galvanized steel wire**. Our hog fence is superior. Our poultry fence beats the world. Our lawn fence is ornamental. Our **slat corn cribs** and **steel grain bins** are popular. Ask your dealer, or write us for catalogue.

THE DENNING WIRE & FENCE CO. : : Cedar Rapids, Iowa

The way of the transgressor is hard. If Jacob had pushed on into the town of Luz, chances are he never would have seen the ladder. Our age needs more chance to meditate. The pendulum has swung to the opposite of mediaeval anchoritism. Quaintly and well does George Herbert say: "Choose sometime to be alone—Salute thyself!"

The stoniness of Jacob's pillow had better not be unduly emphasized. It was not an unusual hardship then, nor to this day, in the East. William Taylor, missionary bishop to Africa, carried a stone in his satchel. It had a notch in it as if artificially made just to conform to a human head. The bishop was wont to supplant feather pillows with his stone, and affirmed that it drew the heat from the head and superinduced to sleep.

Be careful not to make the ladder of the vision serve too many purposes. Jesus in His conversation with Nathanael makes it the symbol of His Mediatorial work, which spans the chasm between God and man, and makes intercommunication possible. That is enough. (John 1, 51.)

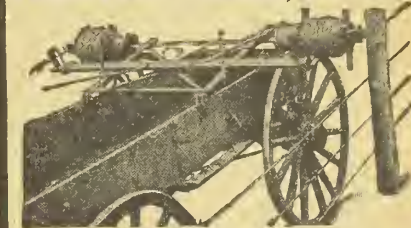

The pillar reared and anointed may stand for the use of form in religion. Constituted as we are, the employment of religious ceremony is indispensable. Someone says the forms of religion are like a ladder. The vitally religious man uses the ladder to reach a greater altitude. The formalist just keeps running up and down it to exhibit his agility.

Alms and prayers are inseparable. Jacob evinced his sincerity by pouring one-tenth of the oil in his cruse upon the memorial he had set up. This required faith; for the oil seemed indispensable for the comfort of his long journey. The Divine claim is small. God takes the earnings of one finger, and lets us keep that of the other nine.

Once in childhood, far from home, I was taken by a person I did not know to a strange house. The loneliness was almost insufferable; but just as we entered the hallway I glanced up the staircase, and there on the landing stood my father, smiling at me. The whole situation was changed in an instant. That is but a faint suggestion of how the sight of the Heavenly Father, standing at the head of the staircase of the dream, must have banished Jacob's loneliness and reassured him.

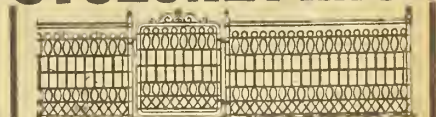

Events and persons cluster about Bethel like filings about a magnet. Here Abraham had a tent and God had an altar. (Gen. xii, 8.) Here Abraham

### Farmers and Stockmen, Attention!

No danger handling barb wire if you use the **Stark Combined Wire Reel and Stretcher** (patented). It is just the thing for building new barb wire fences and for rolling up barb wire if you wish to remove any old fences. This machine is placed on a wagon box and fastened thereto with clamps by two bolts, without any injury to the box, and one man in the seat driving the team can roll up more barb wire without scratching his hands or tearing his clothes than twenty men could do by hand, and it is rolled up on spools in just as good shape as new wire coming from the factory, and can be used again for building new fences. For building new fences two spools can be placed on the machine and be unrolled at the same time as fast as the team can walk, and the wire is stretched by the same machine. For further information write to **C. W. STARK, - MOUNTAIN LAKE, MINN.**

**OTTO SCHWIEN, Box 204, Davenport, Iowa.**

showed his generous spirit in allowing Lot first choice in the partition of the

land, and let his uncanny greed in taking the best portion (xiii). Here Jacob dreamed (xxviii, 19) and made oblation (xxxv, 14, 15). It was the depository of the ark, and there was an altar there to which the people generally resorted. (Judges xx, 19.) It was one of the holy cities to which Samuel resorted as circuit judge. (1 Sam. vii, 16.) Elijah (2 Kings ii, 23), Elisha (2 Kings ii, 23-25), Jehu (2 Kings x, 29), are associated with it. Among the prophets, Amos (v, 14-22) and Hosea (xii, 4, 5) refer to it.

A foul blot is on the fair record of this ancient place. Almost continuously with the pure worship of Jehovah at this place runs the worship of local divinities, until Jeroboam makes calf-worship the state religion of the Northern Kingdom. (1 Kings xii, 28.)

Strange that a place so conspicuous in the Old Testament is not so much as mentioned in the New. Yet Jesus and the apostles must have been often in this locality.

Probable that the name Bethel was in use with a religious significance before Jacob applied it to this site. It certainly continues in use with the same significance; as, for example, the chief sanctuary of the Mohammedan world, the Beithallah of Mecca.

Jewish tradition says that the stone Jacob set up at Bethel was removed to the second temple and used as the pedestal of the Ark of the Covenant. It is supposed to have survived the destruction of the Romans.

The ruins of Bethel cover four acres, and consist of very many foundations and half-standing walls. Eastward is a hill covered by the most perfect heap of ruins to be seen even in this country of ruins. This is oft-mentioned Ai.

#### The Lakewood Farm Sale.

On Wednesday, March 20th. Mr. H. G. McMillan, of Rock Rapids, Iowa, held his ninth public sale of registered Percheron stallions and mares under very favorable circumstances and again demonstrated the possibilities of making a good sale conducted on strictly honorable lines. The square deal has been the watch-word at all preceding Lakewood sales until now the public is fully convinced that when an announcement from Lakewood occurs they have the assurance that everything offered will be sold and that every imperfection possessed by any of the animals offered will be carefully pointed out. March 20th was an ideal day for such an occasion, and the tremendous crowd that greeted Mr. McMillan and faced the auctioneers must certainly have been gratifying to him. A variety of states were represented, as will be seen

in the sub-joined list of buyers. In the forenoon the stallions were sold, twenty-two of them bringing the snug sum of \$15,280. No high prices were realized on any of them, and as is usually the case, the Calypso stallions were in the best demand. In the afternoon forty-one mares were disposed of for the sum of \$19,440. These mares were scattered almost to the four quarters of the earth. Mr. A. C. Huidekoper, of Meadville, Pa., was again a purchaser of some of the choicest mares in the offering. The other buyers were from surrounding states nearer home. The auctioneers—Cols. F. M. Woods, Pat McGuire, Dan Sayre and M. D. Shutt—all did most excellent work in securing the rapid bids from the eager buyers who were anxious to get hold of one or more of the choice things from Lakewood. The Calypso mares and fillies, like the stallions, were in best demand and outbid those of any other line of breeding. After Colonel Woods' very able speech, Mr. McMillan was called to the stand and asked to make some remarks relative to the sale about to be opened. Mr. McMillan publicly declared that this sale, like all its predecessors, would be conducted on honest and honorable lines, with no by-bidding and with nothing covered up in any way, shape or form. He stated that whenever an animal was brought into the ring and nothing said relative to his soundness, that of itself carried with it a guarantee that the animal was right in every way. There were only four animals out of the sixty-three sold for which any apology was needed, and this explanation was made when each of these four animals was lead into the ring. The results of this sale prove another great victory for the home grown Percheron, and also is another epoch in the successful history of the great breeding establishment at Lakewood. It was said at Mr. McMillan's December sale that he could never again put forth such an offering of high-class stallions and mares, yet at this March sale it was possible for Mr. McMillan to excel that offering at least in some respects, and when the sale was over there was still an active demand for good stallions and mares. The Homestead congratulates the proprietor of Lakewood and trusts that the missionary work that has been done by this establishment will continue to materialize substantial gain for the worthy proprietor, Mr. H. G. McMillan. The sub-joined list of every animal sold, and with the postoffice address of each buyer, will be an interesting study for those who were not able to be present:

## Going to Build?

If you are planning to build have a care in the selection of materials. Don't let price get the better of quality.

## LINOFELT

will cost you a little more than building paper but it will keep your house warm and comfortable and save about a third on your fuel bills. It's a great deal cheaper to build a warm house once than heat a cold one all the time.

If you are planning to build this year let us send you a sample of Linofelt, together with reports of scientific tests of its efficiency.

Linofelt is made of a degummed flax fibre, stitched between two sheets of rosin-sized building paper, and is absolutely the best non-conductor of heat and cold known. Actual test has proven it to resist the passage of heat 44% more than the best building paper.

Write for booklet and sample of Linofelt. Just the thing for Barns and Poultry Houses.

TICKS

ZENOLEUM

CURES  
SCAB

**The Purest Coal-Tar Dip**

The successful shepherd watches his sheep as a cat watches a mouse. He dips in Zenoleum to keep the sheep free from ticks and lice. He dips to cure scab, if by accident scab infests his flock. He disinfects the pens to keep them clean and the sheep healthy, because healthy sheep grow into good fleeces and more mutton. This makes a flock profitable. **ZENOLEUM is recommended as a remedy for stomach worms.**

**The Principal Sheep Breeders in America**

## USE ZENOLEUM

They find it the best of all dips after many years' experience. *Forty-two Agricultural Colleges* say "Zenoleum is best." It is equally good for many ailments and diseases of cattle, horses, swine, and poultry, and has a hundred uses of interest to good housewives.

**No Strings to the ZENOLEUM Guarantee**

Here it is: If Zenoleum is not all we say it is, or even what you think it ought to be, you can have your money back. No talk, no letters—just money.

**The Zenner Disinfectant Co.,**

#### SUMMARY.

22 stallions	\$15,280; average, \$694.55
41 females	19,440; average, 474.15
63 head	34,720; average, 551.00

#### The McLaughlin Sale.

The Short-horn sale of Mr. W. H. McLaughlin at his farm near Shelby, Iowa, on March 18th, was well attended and an average of about \$100 was made on everything. Mysie Glover, a Duchess of Glover bull, topped the sale at \$205, and the four-year-old Duchess of Glover cow, Duchess, topped the female offering. Quite a number in the sale were young helpers and young bulls. These were largely the get of his well-known Scotch bull, Baron Kead 3d. Col. Geo. P. Bellows cried the sale. Below is a list of those selling for \$90 and over:

#### COWS.

Duchess, four years, E. A. Cobb, Harlan, Iowa	\$195.00
Nerissa 18th of Maine Valley, seven years, W. H. Brown, Shelby, Iowa	120.00
Violet's Flower, nine years, C. W. Daws & Son, Harlan, Iowa	180.00
Violet Flower 3d, one year, L. C. Green, Avoca, Iowa	90.00
Catherine 4th, five years, Fred Bloomer, Minden, Iowa	92.50
Scottish Queen, three years, Thomas Guinan, Portsmouth, Iowa	120.00
Secret Maggie, six years, F. H. Copeland, Portsmouth, Iowa	125.00
Minerva 2d, eight years, B. F. Roland, Portsmouth, Iowa	100.00
Violet 2d, three years, L. C. Green	92.50
Angeline, two years, F. Linn, Shelby, Iowa	130.00

#### BULLS.

Mysie Glover, one year, L. Burnam, Harlan, Iowa	205.00
Steadfast, one year, Fred Bloomer	130.00
Nugget, one year, John Pomeroy, Shelby, Iowa	130.00
Glover Jr., one year, Peter Claussen, Tennant, Iowa	145.00
Scarlet Lad, one year, Henry Claussen, Shelby, Iowa	102.50
Prince Royal, one year, Henry Johnson, Persla, Iowa	100.00

#### White Bros.' Angus Sale.

The dispersion sale of Aberdeen Angus cattle made by Messrs. White Bros., at Perry, Iowa, on March 19th, brought out a splendid crowd of breeders, and everything was disposed of at good prices. The cattle were in nice breeding condition, but were not spe-

cially fitted for sale. Everything sold well, and especially the more desirable families. Blackbird Eclipse of Glen Lea, a five-year-old daughter of Leander of Dalmeny out of a daughter of Moon Eclipse, topped the sale at \$360, and was purchased by Mr. Chas. Escher, Sr., of Manning, Iowa. Her two-year-old daughter, Blackbird Eclipse of Dallas, went to Mr. L. L. Atwood, of Spencer, Iowa, at \$275. Messrs. Chas. Escher & Son were heavy buyers of the good things in the sale. Mr. W. C. Sanger, of North English, Iowa, secured Home Dale Queenan, a Queen Mother cow, at \$300, and her year-old daughter went to Messrs. Rosenfeld & Siverly, of Kelley, Iowa, at \$195. The latter firm also secured the ten months old Blackbird heifer, Blackbird Eclipse of Perry, at \$310. The herd bull, Prince of Pilsen, went to Mr. P. M. McNamara, of Des Moines, Iowa, at \$200 and was the bargain of the sale. The females averaged \$117 and the bulls \$88. The average on the entire sale was \$110. Col. Silas Igo cried the sale. Below is a list of those selling for \$100 and over:

#### COWS.

Blackbird Eclipse of Glen Lea, five years, Chas. Escher, Sr., Manning, Iowa	\$360.00
Imp. Eustace of the Dell, seven years, L. L. Atwood, Spencer, Iowa	205.00
Imp. Kate 2d of Tullnally, four years, Chas. Escher & Son	200.00
Home Dale Queenan, four years, W. E. Sanger, North English, Iowa	300.00
No. 62	195.00
Eleanor of Maple Grove, ten months, L. L. Atwood	150.00
Lavender 11th of Tullnally, seven years, Tom Scott, Perry, Iowa	130.00
Lavender of Escher Springs, four years, Wm. Spear, Neola, Iowa	100.00
Aquila, five years, Griffin & Son, Manson, Iowa	105.00
Alfalfa Georgiana, four years, C. Escher & Son	150.00
Lala 2d of Dallas, 2 years, Griffin & Son	125.00
Blackbird Eclipse of Dallas, two years, L. L. Atwood	275.00
Entoria of Dallas, two years, Chas. Escher & Son	300.00
Kale of Dallas, two years, Charles Escher & Son	305.00
Quila, two years, Griffin & Son	125.00
Blackbird Eclipse of Perry, ten months, Rosenfeld & Siverly, Kelley, Iowa	310.00
Kale of Perry, ten months, Chas. Escher & Son	195.00

#### BULLS.

Prince of Pilsen 59249, six years, P. M. McNamara, Des Moines, Ia.	200.00
Home Dale Quality, one year, C. C. Leeper, Colfax, Iowa	135.00
Kent of Dallas, one year, W. D. McCabe, Osage, Iowa	185.00
Eaton of Dallas, one year, August Voge, Portsmouth, Iowa	167.50
No. 62, Queen Mother heifer, Rosenfeld & Siverly	195.00

#### CANADIAN-AMERICAN LAND AND INVESTMENT COMPANY.

The above is a limited company dealing with choice Canadian lands, particularly in the province of Alberta. This is the first time this advertisement appears in our columns and we ask our readers to give it special attention, should this be in their line. During these days of land speculation it is very necessary that the buyer be fully informed as to the character and quality of the land he buys. The company above mentioned are prepared to put land seekers in close communication with those having land for sale. Full information and printed matter regarding these cheap and valuable Canadian lands may be obtained by writing the Canadian-American Land and Investment Company, Ltd., 14 Burns Block, Calgary, Alta.

**Buy Roofing Direct from the Mills**

**BEACON-ITE**  
LONG LIFE ROOFING  
We Pay the Freight

**Better Barn Roofing**

There is no building around your premises that requires a better roofing than your barn. On the quality of its roof depends the protection of your stock, grain, feed, machinery, etc., which is of vital interest to you. One leak during a heavy rain is liable to cause more damage than a new roof of BEACON-ITE would cost.

When you put a new roofing on your barn, why not use a material that will not leak? BEACON-ITE LONG LIFE ROOFING is made of materials that make it absolutely water-tight. Isn't this the kind of roofing you want for all of your buildings, one that you will not have to patch after every rain?

About the cost: BEACON-ITE is the only roofing you can buy direct from the mills; thereby saving the dealers' profit. We pay all the freight charges.

Write to-day for FREE samples of this water-proof roofing and our wholesale prices. Then judge for yourself.  
BEACON-ITE MILLS, Dept. 4, St. Louis.

**Traction Engines For Sale.**

We have on hand ready for delivery several 15 Horse-power Traction Engines, new and second hand, also one 8-horse-power Traction Engine second hand, that we will sell very cheap in order to close them out within the next few months. A great opportunity to buy a good engine at practically cost price.

**THE O. S. KELLY MFG. CO.,**  
IOWA CITY, IOWA.

**WATCHES, Watches My Specialty. That's Why**  
I want to prove to thousands of readers of this paper, that I can save you from 20 to 50 per cent on any make of a watch. I handle nothing but high-grade watches—Elgin, Waltham, etc. Drop me a line today and let me tell you why I can save you money, give you better service and satisfaction than elsewhere.

**\$3.95** For a genuine 18 size 7 jewel ELGIN or WALTHAM Watch complete in solid nickel screw back and bezel case. Now this is an extraordinary low price for a high-grade watch, one that you can't afford to miss even if you have a watch. Why buy a watch that you know nothing about and give more for it, when here I offer you standard makes, known the world over as the best, at prices never before heard of? Think of it, order today—send postoffice order. Watch will be finely regulated, carefully packed and sent you by express.  
Louis C. Rathbun, Maynard, Ia.

**FOR SALE.**

One Peerless 16-Horse Engine, one Peerless Separator, Self-feeder and Wind Stacker, also one Joliet No. 2 Cornsheller.

THIS machinery is good as new. Will sell for half its cost when new. Will sell for cash, or write what you have to trade.

**W. R. HAINLINE,**

Blandinsville, Illinois

**SOLD ON 3 Months' Trial.**  
1907 model gasoline engines, all sizes. Highest class, simple engines made. Three months' trial will prove it. For general information and prices address,  
**Holland Engine Co., Dept. L, Cedar Rapids, Ia.**

**FOR SALE AT A BARGAIN**

SIX slightly used Cyclone well drilling machines, 5 five steam, one gasoline power. All in first class shape. Also 2 1/2 horse power gasoline engine. Address,  
**B. F. RICHARDSON,**  
DUBUQUE - IOWA.

**WANTED**—Men to do tile ditching. Must be able to furnish good reference and sober. Please state prices wanted on different depth ditch. C. H. Drake, Hazleton, Iowa.

**ECHOES FROM A KANSAS FARM.**

By Henry Hatch.

There is no standing still in any trade just now. This certainly is prosperity. In our nearest town (one of about 300 people) there are now nine business and dwelling houses under course of construction, with six more to be started soon. The towns and the country are building up together, so it seems.

Farmers, as a rule, do not take much pride in seeing a town build up, where buying and selling is done on the plan of giving the town fellow the best of the bargain. There are towns in the West that have been noted for high prices of goods sold and low prices of grains and stock bought. We do not care about seeing such towns improved in the way of new buildings.

We never have lived nearer than seven miles to a town, so the time we have spent in town has been limited. We usually aim to make the round trip in a half day, so must do what business there is to be done, and start home. We know of some men who spend so much time in town that they become forgetful; forget to go home before their wives have the chores done.

One of our neighbors bought a new disk harrow a few days ago, and went out to try it today. His field was still too muddy, but before he got out he went far enough to spring the frame to each section of disks. The machine is made altogether too light, but it was made to satisfy the demand for a cheap tool. This one probably cost from \$5 to \$6 less than the "standard" style of harrow. It always pays to add enough to the price to get the very best, no matter what kind of a machine you are buying. We haven't been able to find a single exception to this rule.

For the last half dozen mornings the boo-oo-oom of the prairie chickens has been heard. This early morning call of the wild rooster never fails to remind us of earlier days than these. When we first came to Nebraska, we would not only hear these calls all around us, but would often see the birds as they did their calling. Once father shot a prairie chicken, while standing in the kitchen door, and always one could get all such game he wanted by taking a short tramp. In a very few years from now the prairie chicken will be very nearly extinct. We are surprised that as many hang onto life here as do.

Why is it there is always a feeling of half sadness and half pleasure comes over a person when something recalls the earlier days of these prairies? It does not seem possible that even we have seen the upbuilding of this western empire. The time seems so short to when farm homes did not average ten to the township. In this short space of time what wonders have been wrought! There will never be such a rapid and wonderful transformation as this again. Twenty years ago we knew every family within twenty miles; now we hardly speak to the neighbor living on "the next eighty."

There will be a whole lot of corn listed again this season hereabouts. If March had been a favorable month for plowing, the acreage of listed corn would have been cut down surprisingly, for the majority of our farmers, down deep in their hearts, still believe that plowing and surface planting is the best. But, being short-handed, anyway, and with unfavorable weather for field work keeping us at the house and the teams in the barn, listing will be the usual recourse to get the crop in on short notice. Many, however, will use the disk harrow before the lister, helping to stir much more of the soil than the lister alone would. With a disk harrow, a riding lister and four good horses, one man can handle more ground in this way than by plowing and top-planting, as he is working with bigger tools all the time.

It has now been eleven years and one month since the writer landed on the present farm. It seems but eleven months, instead. We are wondering this evening if other localities have seen the changes in this length of time that this one has. We haven't been able to take the time to see; besides, traveling on railroads costs a farmer money. He cannot get free rides as politicians can.

**"All Solid Everywhere—Not Shoddy Anywhere."**  
The soles of KIRKENDALL SHOES are made from Oak-Tanned Leather. Only the very best oak-tanned and slaughter leather is used, and it is not tanned by the short, quick acid methods so commonly used by many tanners. Where but a short time is needed to tan leather by acids, it is a process of months to produce oak-tanned leather, and oak-tanned leather is the old-style, original hark-tanned leather. It is the best leather obtainable, and is vastly more durable than ordinary tannage.

**KIRKENDALL'S ELECTRIC WELT SHOES**

Are made for those who want foot comfort; for people tired of ordinary footwear; people who want their shoes to look well, wear well, and retain their shape. They are the most flexible, comfortable shoes on the market. Thoroughly reliable western-made shoes, will withstand all reasonable wear.

Your dealer undoubtedly has KIRKENDALL SHOES, in all leathers, lasts and sizes. Ask him. If he has not, he can get them for you. Send us his name and address.

**F. P. KIRKENDALL & CO.,**  
1101-1105 Harney Street  
OMAHA, NEBRASKA.  
"Western Made for Western Trade."

But a farmer cannot always leave his work, should he be provided with a "pass." Our past eleven years have been busy ones, but, as we look back over them this evening, there are no regrets. Every member of the family is still here and we are just starting in another season of work with times never more prosperous. Eleven years can bring a good deal of sorrow or a good deal of pleasure.

**Ridding Premises of Cholera**

To the Editor of The Homestead:  
I notice in a recent issue of your paper that one of your subscribers, Mr. A. H. Gerrard, asks for the experience of others on some phase of the hog question. For instance, he asks how long a person should wait after losing his hogs by cholera before making purchases of breeding stock. Now this will depend on circumstances. The hog house might be disinfected or a temporary house built in a short time, but I would not advise anyone to buy hogs at present prices and put them in lots or pastures where hogs have died from cholera before the ground had been plowed and had produced a crop of some kind.

If a temporary house could be built in a new place the case would be different, though there would still be some danger of infection being carried by other stock or by wagons used in hauling feed.

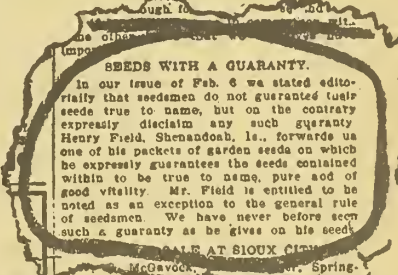

By all means, save the sows that live through a siege of cholera because they are then immune from the disease. Ten years ago the hog cholera killed off all my hogs but one. This one was bred as soon as she was in good condition to a male that had passed through the disease. She farrowed nine pigs in November and the next July eight of them weighed 2,140 pounds. Four years later the swine plague, which is sometimes called cholera, carried off about half of my shoats. The sows that survived were bred two months later to a male that had previously had cholera and the litters from those sows did exceedingly well. However, one must be careful not to breed sows until they are in good, thrifty condition. It is not enough to fatten them merely, but they should have shorts or other feeds that contain protein to build up the system.

One must be very careful about feeding after hogs have passed through a siege of cholera. The disease leaves their stomach and intestines very much irritated, and consequently it would be a great mistake to use coarse foods. It is much better to feed slops or ground feed that is of as little bulk as possible until the animal is in normal condition. Audubon county, Ia. P. Peterson.

The Missouri legislature has been exceptionally good to the farmers of the state at its recent session. Liberal appropriations were made for good roads, a bill was passed that provides for county farm experiment stations, another authorizes county courts to appropriate not over \$100 annually for the aid of agricultural or horticultural societies, and one other provides that farmers can register the name of their farm with the

**One SEEDSMAN Who GUARANTEES His Seed True to Name**

Clipped from Breeders' Gazette Feb. 20th

**SEEDS WITH A GUARANTY.**  
In our issue of Feb. 6 we stated editorially that seedsmen do not guarantee their seeds true to name, but on the contrary expressly disclaim any such guaranty. Henry Field, Shenandoah, Ia., forwards us one of his packets of garden seeds on which he expressly guarantees the seeds contained within to be true to name, pure and of good vitality. Mr. Field is entitled to be noted as an exception to the general rule of seedsmen. We have never before seen such a guaranty as he gives on his seeds.

SALE AT SIOUX CITY, IOWA.  
McGowan, Shenandoah, Ia., Spring-  
measured 120 lb.

This clipping in connection with the list of exposures of adulterated seeds, make mighty interesting reading.  
For 12 years I have carried a guaranty of purity, genuineness and germination on the seed I sell, and I propose it shall stand 50 years more. I have faith enough in my seeds that I am willing to back it up.  
This guaranty has helped me in building up the best seed business in the west. I sell all my seeds subject to a guaranty of Government Standard or better. I sell subject to your test and approval. I will ship on approval. I sell all kinds of seeds, seed corn, grass seed, garden seed, small grain and all on the same terms. Write for catalog and free samples, or send along your order for shipment on approval.

**HENRY FIELD,**  
Seedsman

Box 25, Shenandoah, Iowa.

county clerk for one dollar which will prevent it from being adopted by other farmers. The office of county highway engineer was created, the pure food law, and the bill establishing the office of state bee inspector for the protection of the common honey bee. Much beneficial legislation has been accomplished in all lines this past session.

**In the Good Old Days**  
the only way of tanning sole leather was by the use of oak bark. This required some months, but the result was a leather that possessed in the highest degree all the life and long wearing qualities, that a leather could have. Present day methods of leather tanning have changed. The old-fashioned way has been too slow. Much leather now in shoes on the market is poorer than cloth and paper. Poor tanning is largely the cause. In the Kirkendall Electric Welt Shoe only the very best oak tanned sole leather is used. These shoes are built for comfort and lasting quality. Ask your local dealer for Kirkendall's Electric Welt Shoe and if he does not have them write direct to F. P. Kirkendall & Co., 1101-1105 Harney St., Omaha, Neb., sending your local dealer's name and address. See the advertisement on this page. Mention The Homestead when writing.

IN THE GREAT SOUTHWEST.

An immense fissure caused by the bursting of a large gas well near Sapulpa, I. T., is on fire and attempts to confine the gas have so far failed.

Fifteen suits are to be filed in the United States circuit court at St. Joseph, Mo., against three of the large railway systems of the Southwest, for violation of the thirty-six hour law. In most cases the shipper authorized the keeping of stock on the train the full thirty-six hours which request was not granted.

A large stock feeder at Seneca, Neb., had fifty head of steers die in four days last week from being poisoned. Strychnin was discovered in the stomachs of those dead.

The present outlook for a fine fruit crop in Missouri this year is unusually bright, according to a statement made by W. H. Barnes, secretary of the state horticultural society. He says that the winter has been a splendid one, with all of the moisture needed, and barring a sudden radical change there is every reason to hope for a record crop. Peaches, however, do not look as favorable as other larger fruit. Apples, pears, cherries and plums are in fine condition.

The "dead" record in hogs arriving at markets during the hot weather of last week has been something frightful. Unloading chutes at all points have been strewn with carcasses of animals that died in the cars enroute to the markets. St. Joseph had about 500 dead one day and a proportionally large list on other days.

Frederick Saugrain, the oldest living man to be born in the Louisiana purchase, and the oldest native born citizen of St. Louis, celebrated his 100th anniversary. He was a lifelong personal friend of General U. S. Grant, who he helped erect a cabin on Granvois Creek near St. Louis.

A clash between federal authorities and a negro society of fanatics at Muskogee, I. T., resulted in the death of several colored parties.

W. J. Honeyman, Greenwood county, Kan., broke all state records of Poland China sales recently. Purity Girl, sired by Meddler, the world's champion boar, and out of a Thistledown dam, sold for \$1,100, going to parties at Peck, Kan. Several others sold for \$500 per head. Total on sale of forty head was \$5,447.20.

The Kansas State Board of Health has opened a school of instruction at Topeka, for the purpose of giving the four field inspectors in the state a course of training preparatory to starting them out on a crusade against impure food-stuffs. After receiving several days of instructions and listening to lectures by the state's analysts the field inspectors will be taken on a tour of the city and given a little practical work.

Hereafter veterinary practitioners in

Kansas must have a license to ply their profession and Gov. Hoch has appointed the following board: H. A. Maxwell, Salina, one year term graduate. T. N. Hadley, Kansas City, Kan., two year term. D. O. Knisely, Topeka, three year term.

The prospects for a large crop of fruit in the new state of Oklahoma were never more flattering than they are this spring. What is more to the point, the farmers of Oklahoma seem to appreciate the fruit growing industry as never before. The local hardware dealers report that more spray pumps have been sold this year than in ten years before. Moreover, the fruit growers are evincing an active interest in organizing along lines that will aid them in disposing of their crop. Cold storage for Oklahoma apples was resorted to for the first time in a commercial way during the past year and with very satisfactory results. Commercial orchards are increasing both in number and size.

The prairie dog of Western Kansas is not quite dead, though Professor Popenoe, who is in charge of the state poison laboratory, reports that there has been a great decrease in sales of poison the past three or four years, due to the thorough success that has followed the use of the college mixture. The total sales of prairie dog poison for the last three years is 8,831 quarts. The sales of gopher poison has been smaller, but very constant, and orders came from all over the eastern half of the state.

The biggest book ever published by the Kansas state board of agriculture is the 15th biennial report and consists of nearly 1,350 pages, and will call for about forty cents postage on each book, instead of thirty cents, as has been the case with former reports. The portion devoted to corn is the largest section of the book and the whole subject of corn culture is treated fully by expert authorities on corn culture.

According to the recent semi-annual statement of the board of control, it cost Kansas \$715,218.97 to maintain its nine institutions from July to December 31 of last year, of which amount \$112,495.69 was paid out in salaries. The principal expense is that of commissaries, and one of the most interesting items from this department is that of sugar and sirup. During the above mentioned period the

charitable charges of the state consumed \$3,016.72 in these two sweets. Next to sugar and sirup comes potatoes. The state paid out \$5,573.81 for this vegetable alone, while the cheese bill amounted to \$1,062.72; vinegar and pickles, \$539.33. For the product of the Kansas hen \$5,427.17 was paid out during the six months.

The Red Polled breeders of Texas have organized under the name of the Texas Red Polled Breeders' association. The following are the officers: President W. C. McKamy, of Renner; vice president, J. Webb Howell, of Bryan; secretary-treasurer, B. F. Roby, of Coleman. The board of directors of the association will consist of the above named officers and Dr. W. R. Clifton, of Waco, and J. H. Jennings, of Martindale. The members present represented about 600 head of Red Polled cattle, which shows how that breed is coming to the front. The next meeting will be held in San Antonio next November.

The public sale of Hereford cattle made by the members of the Texas Hereford association made an average of \$168.40 on forty head. Only three animals were sold for less than \$100. The highest priced animal was a heifer sold by Oscar Miles, of Ft. Smith, Ark., at \$350, going to parties at Midland, Tex.

Three new cheese factories are to be built this spring in the district north and east of Kaukauna. With the wholesale prices of cheese the highest that ever was known in its history and butter at top notch prices, it is little wonder that dairying interests are looking up these days. On every hand is seen evidences of increasing herds of cows, building of new cheese and butter factories and increasing the capacities of those already in operation. Many of these establishments are being run on the co-operative plan and farmers are large holders of stock.

Milwaukee people are winning a good many of the Carnegie hero medals and recently several were presented to those deserving this recognition.

PETER HOPLEY & SON'S STALLIONS.

Those of our readers who are in search of Percheron, Suffolk, Belgian or German coach stallions should visit the stables of Messrs. Peter Hopley & Son, at Lewis, Iowa. Just now they are offering some special bargains in stallions and for the next thirty days they will make prices that will defy competition. This is one of the well-known

draft horse firms in the West, and no firm in the state handle better horses than will be seen in their barns. The word of Messrs. Peter Hopley & Son stands for honesty and integrity in the draft horse business, and a guarantee from them, which goes with every horse, is worth a hundred cents on the dollar. The senior member of this firm was the first man to import horses to this country, and thirty years ago brought over his first importation. For the past twenty-five years he has annually imported horses from the old country, and no man has selected better stallions for the trade. Mr. Peter Hopley has long since been considered one of the good draft horse judges in this land of ours, and he always personally selects his own horses when he goes to Europe. Of late years he has taken into partnership his son, Harry, who now assumes the active management and has charge of the entire ranch. As a judge of draft horses he is the equal of his father, and no young man in the West has a better grasp of the draft horse business. The firm are particularly well situated to handle draft stallions, and save money for the buyer. They own 1,500 acres of the best land in Cass county and we know of no ranch in the West that is the equal of the Hopley ranch. A visit to their farm is always worth one's while, whether in search of a draft stallion or to see the beauties of an up-to-date farm. In midsummer when the corn grows and grass waves, when contented mares browse on the luxuriant grasses made rich by nature's lavish hand, when the growing colts gambol in the sunshine, and when fat cattle graze on the gentle slopes of one of the richest farms in the state of Iowa, this is when a visit to the Hopley ranch is most appreciated. There is not an acre of waste land on the entire farm. With a great equipment of splendid buildings and ample paddocks for both stallions and brood mares, they are in position to handle draft horses at a saving to their customers and yet at a profit to themselves. They select their own horses and they also sell them. They handle them on the farm where middlemen's profits and commissions are unknown, and this enables them to sell a horse at a reasonable figure. They are now offering special bargains on German coach, Percheron, Belgian and Suffolk stallions, and the next thirty days will see a splendid lot of bargains leave their place. In Percheron stallions they have some extra good ones on hand. There are some extra good blacks that will weigh 1,900 and 2,000 pounds, and they are good ones. They have one very toppy gray stallion and he will weigh right around a ton. He is a draft horse all over, absolutely all right in every way and is the greatest bargain we know of at \$1,200. He is a three-year-old and for his size is as good as there is in the state. In German coaches they also have a number on hand. They have a German coach horse on hand that will make them all go this fall. He is a two-year-old, coming three, and is one of the greatest movers we ever saw. They also have Belgians and Suffolks on hand and anyone who wants a stallion should go and see them at once. They have the horses, and their prices are right. The senior Mr. Hopley will go to Europe in a couple of months for more horses, and in the meantime they want to close out all they have on hand. It will pay anyone wanting a stallion to go and see this firm and their horses. They will sell you a horse that you will never be ashamed of, and at a price that will surprise you.

LOUDEN'S DOUBLE HOOK BARN DOOR HANGER. HE CAN'T HOOK IT OFF. A FLEXIBLE Barn Door Hanger. That works. Allows close fitting of doors, accommodates itself to the inequalities and warping of siding and yet never binds or runs hard. Hung on two sets of hangers, one on each side of an inverted "T" rail. Straddles the track like a hay carrier. It has an absolute center draft, no side hitch. Runs easy and true without a possibility of being blown, rooted or hooked off. Has chilled steel roller bearings. Fully described in catalog of Hay Tools, Barn and Stable Equipments. A copy free. Write for it and know all about the "Hanger he can't hook off."

Louden Machinery Company, 49 Broadway, Fairfield, Iowa.

**TO EXCHANGE:** Good 640-acre farm in Wilkin county, Minn.; 468 acres in Dunn county, Wis., both improved. Want smaller farm, livestock or city property. Box 151, Independence, Iowa.

## Renting Land.

To the Editor of The Homestead:

Mr. Allen, of Laurens, Iowa, has written a letter on a great subject, that of renting farms. This country in central Illinois is nearly all farmed by tenants, only about one farm in ten being run by the owner. This is therefore a great problem with us and one which calls for a great deal of forethought and co-operation in order to keep the country fertile and progressing as it should be. It seems to me that this country must be retrograding at present, as everyone owning a quarter section or more is renting it out and going to the city to live. As a result the farmers are going down hill and our schools are about to run out, as children are being sent to some village or city school as soon as they can read in the third or fourth reader.

This is all wrong. We should have more sociability and more pleasures at home and build up our own neighborhood in place of some other locality. I have been renting for nearly twenty years for grain and cash rents, but have never farmed on the stock plan. So far as my experience goes there is not enough sympathy and co-operation between landlord and tenant. I have never yet found a landlord who would scarcely furnish a thing to keep up the farm. The average tenant has no sheds for his stock, no shed for his implements, scarcely any cribs or granaries for his grain, no house worth mentioning for his poultry, and even the gardens and yards are not fenced to turn poultry. Possibly there is a very poor makeshift of a fence around a small corner of the pasture, the rest of the farm being fenced with two wires or an old hedge that will turn nothing. Yet with all these drawbacks the tenant is expected to go right along and make money and keep up the farm. A great many of our land owners have started with nothing and have had to economize greatly to get along in the world; they have purchased their farms cheap and have dragged along in a very slow way until the farm has paid for itself and they have laid by a small competence which they decide to invest in city property. They move to town then and rent the farm. Frequently they do this because they are not able to do the work on the farm and are too stingy to hire help. The farm is rented to a tenant and he is expected to build it up without a cent. He cannot do this, of course, so they are disappointed and change tenants every year and the farm continues to go down.

I think the owner of every farm should put the farm into proper condition to handle and furnish material to keep it that way. He will then be able to secure a good tenant who will take pride in keeping things in good order. He might exact a penalty on the tenant for not doing his part. For instance, I know a man who makes his tenants agree to pay from \$20 to \$50 for leaving burs or

other obnoxious weeds in the fields and pastures.

To handle live stock, feed the products of the farm to them and divide the surplus is no doubt the proper way to rent, but, as Mr. Allen says, it would be very hard to find the right man. Raising and handling live stock is a science apart from crop farming. There are not many men who have the pluck and perseverance to properly handle live stock. It is possible for one to crop a farm successfully by working ten hours a day, six days in a week, laying off on rainy days and perhaps visiting a few days; but it cannot be done and handle live stock successfully. It takes regular attention 365 days in the year. One must become so imbued with his work that it becomes a part of him. He must not neglect his stock under any circumstances. If they are in distress he must look after them, in the night as well as during the day, and where we find one willing to do this you will find he will not be a renter very long; he soon buys a farm and goes to work for himself.

Dairying is the hardest problem of all, unless help becomes more plentiful than it now is. One can hardly find a single man who will milk at all. Hired men, as a rule, want to be off from early Saturday evening until Monday morning and from one to three evenings during the week.

As to the division of profits and rental, it is evident that the tenant must have more than half to come out whole handling stock; that is, he could not pay for one-half the grass and all other extras, as it costs more to handle stock than to take the grain to market. Where farms are rented on the shares here, the landlord usually furnishes clover, timothy seed with all small grain sown. New clover is cut and divided and the seed is also divided equally, each one paying half the thrashing bill. S. Stogdell. Christian county, Ill.

Seven years ago last September I rented a 200-acre farm in Warren county, Iowa, to two brothers, one married, the other single. We went into written contract for one year, with the understanding that the contract was to hold as long as both parties were satisfied. By the terms of this contract each was to furnish one-half of all stock, implements, seed, etc., each to furnish one-half of the binding twine, to pay one-half of the expenses of the thrashing machine, service of stallions, etc. I was to furnish necessary material for repairs and they were to do all the labor necessary to the running of the farm and keeping it in repair. Each was to receive one-half of the profits and share equally in ultimate division of assets. Everything produced on the farm was to be divided equally, except they were to have a garden patch and butter and milk enough for family consumption. They

have now been on the farm seven years and four months. Neither one has ever seen the contract since it was signed up that I know of, and I think both parties are well satisfied. I have never taken any of the chickens or eggs, nor did I expect to at the time of making the contract; but the men were strangers to me and I wanted to protect myself, as I had fed more chickens for another family at one time than I care to again. I get my share of the turkeys each year, and we consider them the best paying investment on the farm.

There are about 150 rods of hedge on the farm. I paid the men \$25 to put it in repair the first year, and since that time they have kept it nice enough for a yard fence, without expense to me. I had just purchased the farm at the time of making this contract and it was almost wholly gone to burs. The contract stipulated that the burs were to be cut out of the corn after harvest. When the time came I told them to go ahead and be sure to get them all and I would pay them for the work. This I did for two or three years. I think now there is possibly not a cleaner farm in the township. Men all need encouragement, and renters are no exception to the rule.

The contract specifies that the farm is to be run under the supervision of the owner. I think I have identically the plan recommended by M. Olson in a late issue of this paper, and after seven years' trial have no reason to change it in the least.

## QUEEN MILLS SHORT-HORNS.

In this issue of The Homestead we begin the advertisement of the Queen Mills herd of Short-horn cattle owned by the well-known breeder, Mr. George H. White, of Emerson, Iowa. Mr. White has achieved considerable distinction throughout the state and the West as a breeder of Poland China hogs, and his winnings at the leading state fairs has put his Queen Mills herd in the forefront among the Poland China breeders in the West. With a natural inclination to good stock he turned his attention to Short-horn cattle and has founded one of the best herds in southwest Iowa. His experience in the hog business has taught him that the best was what he should have, and that is the kind he has been buying. At the head of the herd is Hampton's Counsellor 264533, one of the best sons of the noted bull, Hampton's Best. This young bull is a roan in color, is a Cruickshank Secret of the bluest blood, a most excellent individual, and a bull of marked characteristics. He is one of the best young Scotch bulls in the state today and Mr. White could have sold him at an advanced price recently to go to one of the best herds in the West. He has been selecting some well-bred females also, and recently purchased at the C. R. Steele sale Imp. Coral Countess, with heifer calf at foot by Ceremonious Archer. He has two good daughters of the noted bull, Godwin, in the herd, and also has a daughter of Victor Allan with a bull calf at foot by the noted show bull, Good Choice. He has several other excellent females that have cost good money and some of these will be seen at the fairs this fall. Mr. White's herd is small as yet, and he has therefore consented to breed a few choice cows at a reasonable price to Hampton's Counsellor, should anyone desire it. He will make a Poland China sale at Malvern, Iowa, on November 9th, at which time he will only sell the tops of his herd. We predict a bright future for Mr. White and his Queen Mills herds, and if energy and good judgment count for anything he will certainly get to the front.

## My Book

ABOUT CURING  
**DEAFNESS** AND  
**EYE DISEASES** AT HOME

I HAVE published a new book which tells of a new method by which people who are willing to devote fifteen minutes of their time each day for a month or two, following my instructions, can cure themselves of mild forms of Deafness, Head Noises, chronic Catarrh, falling eyesight of Granulated Lids, Sore Eyes, Flims,

Wild Hairs, Glaucoma, Weak eyes, and ordinary eye, ear, nose and throat diseases. This book gives the causes and symptoms of each disease and tells you how you can cure it at home, explains my painless method of straightening cross eyes, etc.

I want to place one of these books absolutely free of charge in every home in the United States. One hundred thousand people have used this method. This book tells of their experience.

You can have this book and my advice free, by simply writing me a letter about your case. No money wanted. I simply want you to read of this remarkable system. Write me today.

Address **DR. W. O. COFFEE**,  
340 Century Bldg., DES MOINES, IOWA

Missie 169th, to be included in the sale of Mr. F. W. Harding, at Waukesha, Wis., April 10th  
See Mr. Harding's advertisement on page 39.

## FIELD NOTES.

Scotch and Scotch-topped Short-horn bulls are offered for sale by Messrs. C. W. Daws & Son, of Harlan, Iowa.

Mr. J. D. McDermott, of Wiota, Iowa, is offering a cracking good lot of Scotch hulis for sale, and they are all right.

Mr. J. T. Judge, of Carroll, Iowa, claims December 19th as a date on which to hold a public sale of Short-horn cattle.

Mr. E. A. Olive, of Scranton, Iowa, announces a public sale of Poland China and Duroc Jersey boars on October 19th.

Duroc Jersey boars, sired by the great Proud Advance, are offered for sale by Messrs. Manley & Co., of Lyons, Neb.

Large Improved Yorkshire sows and boars are offered for sale by Mr. F. Rabeller, of Leigh, Neb. He is making reasonable prices on these just to move them.

Formulas for carriage top dressing and weather-proof whitewash are advertised on page 11 by Mr. B. E. Wright, of Superior, Neb. Write him, mentioning The Homestead.

Mr. Ellis G. Henline now resides at Arrow-smith, Ill., instead of at Lexington, Ill., his former address. Kindly bear this in mind when writing him in the future and avoid delays.

Mr. Geo. H. White, of Emerson, Iowa, offers for sale an excellent Poland China boar in Dude's Wonder, a son of Nemo L's Dude, dam being a daughter of Chief Perfection 3d. He is offering him at a reasonable price, because he does not need two boars at present.

Messrs. Isaac A. Novinger & Sons, of Kirksville, Mo., are in position to furnish the best pair of Scotch Short-horn hulis ever produced on their farm. One, a Lavender, is a deep red roan out of a daughter of Imp. Golden Crest and Imp. Lavender Thyme 2d. His sire, Lavender Viscount 2d, was got by the champion, Lavender Viscount. For twelve generations his dams are pure Lavenders. Individually he is a youngster of great promise and is fit to go to the head of some

Mr. U. G. Davidson, of Manson, Iowa, breeder of Crimson Wonder Again, writes: "Just one gilt left, sired by Crimson Wonder I Am and bred for May 15th farrow to American Lad. A choice one and the first \$50 draft gets her. Have shipped to Illinois, Missouri, Nebraska and Arkansas this season, with good Iowa trade. Will sell the young boar, American Lad. He is a good show prospect and anyone wanting to fit a boar

An Only Daughter  
Cured of Consumption

When death was hourly expected, all remedies having failed, and Dr. H. James was experimenting with the many herbs of Calcutta, he accidentally made a discovery, which cured his only child of consumption. His child is now in this country and enjoying the best of health. He has proved to the world that consumption can be positively and permanently cured. The doctor now gives this recipe free, only asking two two-cent stamps to pay expenses. This herb also cures Nausea at the Stomach, Night Sweats, and will break up a fresh cold in twenty-four hours. Address Craddock & Co., 1032 Race St., Philadelphia, Pa., mentioning this paper.

SPECIAL  
OFFER

## TWO PAPERS FOR THE PRICE OF ONE.

## You Know The Iowa Homestead

One of the two. It is recognized everywhere as the foremost agricultural weekly in the world—edited by working farmers—embodying the wisdom and experience of the largest corps of editors and contributors of any farm journal that is published. It has no equal.

## You Have Heard of Farm and Fireside

The other one, published twice a month, twenty-four times a year, a valuable addition to the family. Twelve of the numbers include the splendid Fiction Magazine Section, filled with stories, games and interesting reading for the family. An early feature is a complete novel by Miss Maude Roosevelt, entitled "The Strange Adventures of Helen Mortimer."

## SHEEP.

## CLOVER HILL SHROPSHIRE

IN favor everywhere because of their good size, strong constitution and true type. We now offer a strong, growthy lot of rams and ewes, coming yearlings, sired by 275 to 305-lb. champions of England and America. Will import this summer, as usual, from England and Scotland and will execute orders for show or breeding sheep on a very low commission. If wanting home bred or imported, few or many, our offers merit your consideration.

CHANDLER BROS., Chariton, Iowa

## Allen's Shropshire Rams and Short-horn Bulls

I HAVE a bunch of very fine rams for sale, suitable to head the choicest herds; also 15 young Scotch bulls from 10 to 15 months old.

GEORGE ALLEN, Lexington, Neb.

this fellow. The writer when he last saw him was so favorably impressed with him that we suggested that he be retained to follow the great Viscount of Anoka. Should any of our readers be in the market for a bull of this sort they should not delay, as there are few if any of his equal on the market.

Two Double Standard Polled Durham heifers, coming two years old and of choice breeding, are offered by Mr. W. E. Loughary, of Packwood, Iowa. As the farm has been rented this gentleman finds it necessary to sell his stock and feels that these two individuals are being offered at a price that should take them off his hands quick. They are held for \$80 each and any farmer looking for a good heifer in this breed should write at once. See page 35 and mention The Homestead when you write.

The young man of today who succeeds in any trade owes his success to a good technical training. Almost all the branches taught which fit the young person for a trade are taught at the Highland Park College, Des Moines, Iowa, situated in pleasant environment and with well-organized courses this school offers special opportunities to the person seeking an education. Write for fine new catalog to Mr. O. H. Longwell, president, at the above address, or see page 17. Mention The Homestead when writing.

Probably no faster trotter lives than Jim McGregor by Mark Time 2:19, sold to Mr. C. K. G. Billings at Lincoln, Neb., last August for \$2,000. Although entered in valuable stakes, he was taken east and report says has speed enough to take "championship honors." Mr. Adam Schupp, 1234 O St., Lincoln, Neb., has for sale a half brother to this sensational horse in Earl Time 38830, a show winner and speedy. McGregor blood which threw Cresceus 2:02 1/2, certainly gives extreme speed, through his sire, while Ensign 2:28 1/2, sire of Blue Sign (p) 2:08 and others below 2:20, and three daughters dams of 2:10 speed, has left a noted family, insuring extreme speed on both sides of Earl Time's pedigree. Write for extended pedigree. If not sold, might

Kentucky Breeders Delighted with  
Homestead Advertising Service.RETURNS FROM THE HOMESTEAD AND ABLE BING WORK OF ITS  
FIELD MAN INSURE SUCCESS FOR A SALE OF DUROC-JERSEYS.

Messrs. Amos W. Harris & Sons, proprietors of the Penryn herd of Duroc-Jersey Swine, Waverly, Ky., write expressing the greatest satisfaction with the advertising service of The Homestead. Under date of March 21st, they say:

"We shall have to ask you to change our advertisement, as the sow advertised was sold to a Homestead subscriber before our own copy of the paper reached us, which is going pretty fast. We also wish to express our appreciation of Homestead results generally and of the services of our field man, Mr. D. M. Pierce, in connection with our recent sale. We could hardly have made a sale without the services of Mr. Pierce and your paper. He is certainly a wonder in the sale ring; and any man would make a mistake in this part of the country in not having him present, as, by his assistance and the bids he has, he practically makes the sale. We had a great sale and made an average of \$180; and there were not enough sows bred to Commodore, the king of the breed, to go around."

be farmed to party situated to push speed development. See advertisement on page 37.

Mr. L. C. Barnett, of Indianola, Iowa, offers for sale Percheron and French draft stallions of good weight and profitable age for buying. The former head of this firm was Mr. J. H. Barnett, whose stable has been purchased by the former gentleman, who is well prepared to conduct it properly. See page 37 and mention The Homestead when you write.

Mr. L. C. Reese, of Prescott, Iowa, the well-known Chester White breeder, has a nice crop of pigs on hand this year. No breeder in the state is better known or has done a better business in Chester Whites than has Mr. Louis Reese. His crop this year is sired by O. K. Mikado and High Score. High Score was the most promising show prospect for this year, but Mr. Reese

was unfortunate to lose him. O. K. Mikado is a son of Monarch Jr., a leading winner at the Iowa State Fair. Mr. Reese has a grand lot of brood sows, mostly sired by his old show boar, Prescott Boy, that made such a reputation for the Reese herd. He has a number of very choice litters that show up well at this time and he hopes to see all the boys at the state fair again this year.

Short-horn bulls and heifers, Poland China hogs and hen eggs for hatching are advertised by Mr. Fred Ebendorf, of Strawberry Point, Iowa. He has two first-class young Scotch-topped bulls which have been grown right along from birth and he will spare several heifers if desired. As the spring crop of pigs has been so large Mr. Ebendorf offers to sell sows of April and May farrow that are bred to such boars as Hustle On, a son of On and On, Perf. Spellbinder and to a son of Independence. He also offers eggs for hatching at \$1 per sitting from Silver Laced Wyandottes and Single Comb Brown Leghorns. Write or visit Mr. Ebendorf and mention The Homestead when so doing. See page 36.

Mr. J. G. Trumau, manager of Trumans' Pioneer Stud Farm, writes under recent date regarding their success in the following lines: "Among our numerous sales last week I wish to report the sale of the Shire stallion, Stow Regent, to Messrs. Fred Holtby and Grant Chase, of Collins, Iowa. Stow Regent is a dark bay, white face and legs, rising five years old and notwithstanding the fact that he was imported three weeks since and not in high flesh, weighs upwards of 2,000 pounds. He is an ideal show horse and will make rather warm competition at the Iowa State Fair next fall. The farmers and breeders of Story county are certainly to be congratulated on having the opportunity of a sire like he is in their midst. I am pleased to say that trade with us is very good. I am in receipt of a cablegram from our Mr. J. H. Truman advising us that he shipped thirty-six Shires and Hackneys on the Minnetonka sailing Saturday last. They are due to arrive here April 3d. Included in this shipment are a few of the very best that ever crossed the Atlantic ocean and taking the shipment all through I understand they are well up to the Truman standard."

A letter from an enterprising Illinois stallion establishment reads: "Although the season for selling horses is growing late and the weather so fine that farmers are unusually busy with their spring work, our sales keep up remarkably well. During the past week a company at Maroa, Ill., purchased of us a fine imported three-year-old Shire stallion and Mr. Jas. Parker, of Argenta, Ill., bought an American-bred two-year-old Percheron. Messrs. March & Tudor, of McLean, Ill., bought one of our best two-year-old imported Belgian stallions, and the Athensville Horse Company, of Roodhouse, Ill., purchased an American-bred Shire. Messrs. E. J. & R. L. Hughes, prominent breeders of Kellerville, Ill., get an imported four-year-old Percheron to complete their stud, and we have just closed a deal with Messrs. Bigler Bros., of Sigel, Ill., for a grand four-year-old imported Shire stallion. In this connection we wish to say we have during the past few weeks sold six stallions to our neighbors within a radius of eight miles from Williamsville, and we wish to take this opportunity to express our appreciation of the confidence thus placed in us. Taylor & Jones, Williamsville, Ill." See advertisement on page 38.

#### FOR SALE.

Two Percheron stallions, coming four years old, recorded, will weigh between 1,700 and 1,800 pounds. Must sell at once.

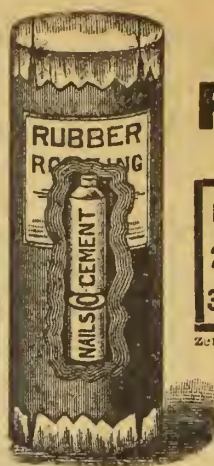

Stanbra & Brown, Humboldt, Iowa.

#### VETERINARY.

Fistula and poll evil are volcanoes of the system which are easily, humanely and permanently extinguished with Dr. Knoblauch's internal remedy. Price fifty cents. Free treatise. Clouse & Stamm, chemists, Geneseo, Ill. See advertisement on page 19.

#### TWO GOOD POLLED DURHAM BULLS FOR SALE.

Messrs. James Wilson & Sons, of Avoca, Iowa, proprietors of one of the best Polled Durham herds in the state of Iowa and the West, offer two good young bulls for sale. One of these is twelve months, the other eighteen months of age. They are both sired by their great bull, Marshall of Orange, and are out of their best cows. If any of our readers want a good Polled Durham bull

## ...WATERPROOF... RUBBER ROOFING

1-Ply \$1.35

2-Ply \$1.90

3-Ply \$2.50

A PERFECT ROOF. Needs no coating and has no sand on it to cover defects. EVERY ROLL GUARANTEED. Will stand any climate, is acid proof, water proof and will outlast shingles at one-third price.

Can be returned if not just as we represent and money will be refunded. Send for samples. References: Citizens and State Banks. Shipping points, St. Louis, Missouri and West Branch, Iowa.

FARMER**

**FARMERS SUPPLY CO.,  
WEST BRANCH, IOWA.**

## Are You Deformed or Crippled?

Read What Mr. Bleakney Has to Say About the Cure of His Son.

To those who are directly interested in crippled or deformed children or young adults, the following should appeal.

Houston, Texas, March 10, 1907.  
L. C. McLain Sanitarium,  
St. Louis, Mo.

Gentlemen:—The boy has no trouble whatever. He uses an ordinary shoe and our closest friends together with the doctor that first treated the foot are unable at a glance to detect which was the crippled foot. The doctor in question examined the foot and pronounced the treatment as remarkable, considering the time same had been treated, says that he has every movement of the ankle and says it is a sure cure. He was somewhat prejudiced when the matter was first mentioned, viz: to sending him there. We had the baby's picture taken last week and am mailing you one of them to show you how his foot looks at this stage of the game. The foot hanging down as shown in the photo was the crooked foot and you will note how straight it is. Your institution will always have a warm spot in our hearts. The kindness shown my wife and baby while there will never be forgotten and rest assured that we are giving the institution the highest praises to any and all interested. You can refer to us at any time. Wife and baby are in excellent health and both send the warmest greetings. Yours truly,  
2910 Washington Ave. W. J. BLEAKNEY.

What we have done for this child and hundreds of other crippled and afflicted people, we can do for you if given the opportunity.

Write us freely and at once regarding any case of spinal deformity, crooked feet, infantile paralysis, crippled or deformed joints or limbs and we will be pleased to advise you. Our book, "Deformities and Paralysis," with references, is free for the asking. The L. C. McLain Orthopedic Sanitarium, 3104 Pine Street, St. Louis, Mo.

## Free Book For Men

A handsome illustrated book which explains all about diseases of men such as Nervous Disorders, Weaknesses, Blood Poison, Skin Diseases, Prostate, Pelvic and Urethral Disorders, Piles, Kidney and Bladder Troubles, etc. This book tells the various stages of these diseases, at what stage they become incurable, and tells of a simple and effective treatment for the cure of the ordinary cases at home. This book tells how men who have broken nature's laws, become weak and run down can regain their strength and vigor and many other important facts which men should know. Those interested should write for the book today. Same will be sent free in plain sealed envelope. Address,

**DRS. FELLOWS & FELLOWS CO.,**  
323 Rollins Bldg., Des Moines, Iowa

to head their herd they should go and see these bulls. The price is right when you consider the quality.

#### KREHBIEL'S HERD OF CHESTER WHITES.

Mr. John H. Krehbiel, of Donnellson, Iowa, writes us that his herd of Improved Chester White swine is in splendid condition and his prospects for a good crop of early pigs are very promising. His herd contains blood from such famous boars as Combination, Nashua Boy and Billy Boy. A few August and September pigs are for sale. Orders are being booked for the present crop and will be filled in their turn, so you had better make your wants known early. See page 35 for card. Mention The Homestead with your inquiry and order.

#### DUROC HERD STARTED AT LONG POINT, IOWA.

Mr. J. W. Briggs, of Alden, Iowa, breeder of Duroc Jerseys, writes that he has just had the good fortune to furnish the Long Point Stock Farm, at Long Point, Iowa, of which Mr. Alex. M. Fennell is manager, with eleven head of well-bred red hogs as the foundation of a herd at that place. Mr. Fennell recently came from Missouri and is an old breeder of Angus cattle. He is planning to have some good stock on the ranch in the near future. Mr. Briggs has an advertisement on page 36 and reports splendid sales.

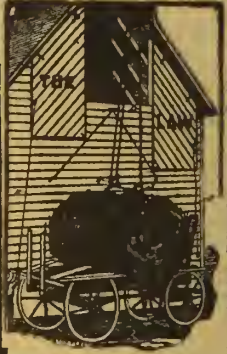

#### ANGUS BULLS FOR SALE.

Messrs. Wheatley & Ward, of King City, Mo., breeders of high-class Aberdeen Angus, can furnish bulls that are ready for service. These are the get of their great herd bulls, Maplehurst Proteros 47351, Hale Lad 2d 42497 or Gardner's Pearl Rosegay 52637. Messrs. Wheatley & Ward are pricing these bulls right and with a herd of the size of theirs, buyers have an opportunity for making selections from a number of bulls. Another thing, when buying from these gentlemen you are buying from men who stand fairly and honestly behind every animal they sell. Once a customer you are always a customer here. See page 36 for their advertisement and if in the market for a bull write them, or, better still, take the train and go visit the herd. King City, Mo., is thirty-two miles northeast of St. Joe, Mo., on the Des Moines, Chariton & St. Joe branch of the C., B. & Q.

#### CHAPEL HILL BERKSHIRES.

The genial proprietor of Chapel Hill breeding establishment, Mr. W. D. McTavish, of Coggon, Iowa, has under date of March 17th written to one of our field representatives to discontinue his advertising of bred sows, as he could not begin to fill the orders that came from Homestead readers for the famous Chapel Hill Berkshires. The change in his announcement on page 37 is to the effect that those who expect to secure the famous, big-boned English Berkshire will do well to get their orders in early. The spring crop of pigs is now arriving and is fully up to the most sanguine expectations. A word to the wise is sufficient. Get your orders in early. Mr. McTavish will deal absolutely square with all his customers and in booking orders they will get selections exactly in the order that they are received. The Homestead heartily recommends the pro-

## LAW HAY TOOLS

In your barn are a guarantee that your hay will go into the mow in quick, clean shape

LET us send you circulars describing our Sure Trip carriers, Safety Lock Ends, Gable End Door fixtures, Detachable hay rack loads. Our door fixtures can be put on an old or new, hip or straight roof barn. Glad to furnish you itemized estimates of the cost of an equipment of this kind for your barn.  
**LAW MFG. CO., ST. PAUL, MINN.**

prietor of Chapel Hill as an honorable, worthy and upright man in every respect, and one with whom it is safe to place future orders.

#### TWO GOOD PERCHERON STALLIONS FOR SALE.

On page 37 of this week's issue will be found the advertisement of Mr. J. S. Golder, of Wisner, Neb., who is offering two good Percheron stallions for sale. One of these is Lord Tennyson 48208, a son of the well-known show horse, Sully 21779. He is an iron gray, will weigh 2,200 pounds in breeding condition and is an excellent horse. His measurements are, girth, seven feet eleven inches, forearm, twenty-four inches, hind arm, twenty-five inches, and will stand seventeen and one-half hands high. He is one of the best stallions in the state and will make an excellent stock horse. He is four years old and just in his prime. Another good horse is Bordeaux, coming three years old, sired by Messrs. Singmaster's old show horse, Rapin 22627. Anyone wanting a Percheron stallion should go and see these.

#### SONS OF IMP. MUTINEER MEET WITH APPROVAL.

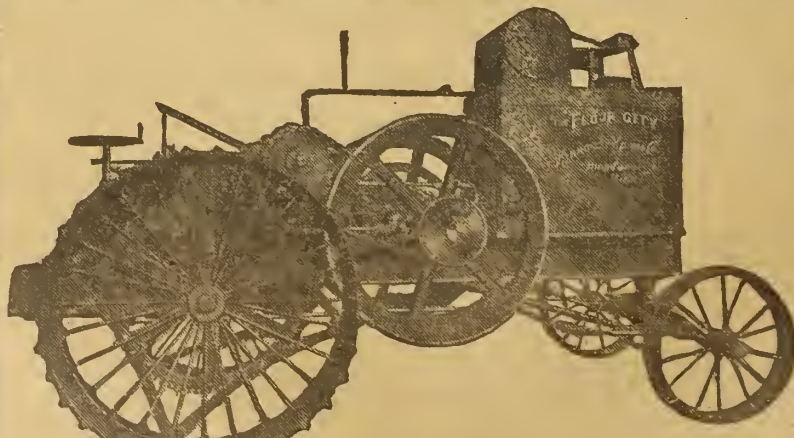

Mr. A. C. Berry, of Unionville, Mo., owner of the great Short-horn bull, Imp. Mutineer, writes that he recently sold Mr. Frank Hass, of Grant City, Mo., a fine Victoria bull that was got by Imp. Mutineer. The price was \$250 and the entire deal was made through correspondence. After the bull reached his new home Mr. Hass writes that he is a good one and fills the bill. This is the report from those who get sons of Mutineer. Mr. Berry has a number of young bulls that are coming on in fine shape. A fine fellow just past a year old and a Brawth Bud, should please some man who does not mind just a little white. Mr. Berry is also offering some Imp. Mutineer heifers that will make someone valuable breeding cows. See page 36 for Mr. Berry's advertisement.

#### IF SMALL LEAKS

sink great ships, it is just as true that small leaks in the roof of a barn will destroy a mow of hay, or any other forage or grain stored there. There is no building which requires so good a roof as the barn. The products of the farm are largely stored in the barn. That is the manufacturing plant of the farm. It is the farmer's mint. There he turns the cheap products of the farm into high-priced goods. Moldy hay and grain will never make palatable feed—the kind that makes fine butter and meat. Protect the supply of feed as carefully as possible if you would make the best profits. The Beaconite Roofing is sold at the lowest possible cost, because it is sold direct from the mills. Do you know of any other brand so retailed? Beaconite is made to last a lifetime. Write for samples and prices to the Beaconite Mills, Dept. 4, St. Louis, Mo. Don't overlook the advertisement which is found on page 27.

#### JOHN GRIFFITH'S ABERDEEN ANGUS CATTLE.

A Homestead representative had the pleasure last week of inspecting the splendid herd of Aberdeen Angus cattle owned by Mr. John Griffith, of Washington, Iowa. We had not seen the herd for some time and found some twelve young bulls of serviceable ages for sale. One plum was noted in the Erica yearling by Scottish Hero. This youngster is fit to adorn the commanding position of heading some good herd of doddlies. He is true in his lines and is evenly balanced throughout. His head is well high perfect and his shortness of leg combines to make him a star in any company from the standpoint of true doddle type. The other bulls for sale are of the following families: Heather Bloom, Abbess, Rothme Queen, Princess, etc. The herd bulls are Scottish

#### Flour City Gasoline Engines.

Any make of gasoline engine will run something, somewhere, somehow. The Flour City will run anything, anywhere, all right. If you do not believe this, the manufacturers, Kinnard-Haines Company, 824 44 Ave. N., Minneapolis, Minn., will send you testimonials of thousands of pleased customers to whom they would refer you. The company manufacture a full line of portable, stationary and traction engines and would be pleased to send you one of their unique catalogs, full of useful information for those who are already using gasoline engines or who expect to purchase one in the future. Write them today and mention The Homestead. Watch The Homestead columns for their advertisement.

Hero and Glen's Prileno. The first is a Queen Mother bull sired by Woodlawn and he by Lord Woodlawn. This is a great bull and an exceptional sire. Glen's Prileno is a Pride bull sired by Imp. Prileno and out of a Pride cow sired by Imp. Ahelour. Mr. Griffith is desirous of closing out these bulls at bargain prices. He will doubtless make a public sale this coming fall, particulars of which will appear in The Homestead in due time.

THE AMERICAN COLLEGE OF AUCTIONEERING.

Col. Harry W. Graham, president of the American College of Auctioneering, at Chillicothe, Mo., has a change of advertisement on page 35 that should interest all who contemplate entering the auctioneering business. No profession pays better than that of the competent auctioneer and the beginner or the man who contemplates entering the field as a salesman of any of the breeds of purebred live stock or the conducting of farm sales should not miss the opportunity of gaining the information that may be gotten out of a term at the American College of Auctioneering. Students who formerly attended Colonel Graham's college, at Chillicothe, Mo., have, after going home, sent strong testimonial letters as to what they think of the school and as to what they are doing since they graduated. These letters are produced in the new catalog which will be ready for mailing next week. The catalog gives full information of the work done during the term. If you are interested write today for one, mentioning this paper. "See page 35 for advertisement."

MOSSMAN'S SECOND SALE FOR THE SEASON.

On March 12th Mr. A. L. Mossman sold a small but very choice bunch of Duroc sows and gilts at his farm near Radcliffe, Iowa. Twenty-six head in all were sold, of which Mrs. A. J. Conklin consigned seven. The nineteen head sold by Mr. Mossman averaged \$39.60, which was certainly doing well, as the sale in January took most of the best ones that were to be sold. Mr. H. Heimendinger, of Britt, Iowa, topped the sale by taking No. 1, a litter sister to the top hog in the previous sale, at \$75. Other bids kept company and the details are, viz.: Col. O. L. Mossman and McIlrath sold, Nos. 1 and 21, H. Heimendinger, \$75 and \$70 respectively; Nos. 13 and 22 went to Mr. L. Menifee, Polk City, Iowa, for \$34 and \$24 respectively. Mr. O. L. Mossman secured No. 18 for \$57.50, No. 20 for \$39, No. 2 for \$35, No. 3 for \$29 and No. 14 for \$25. Mr. A. A. Lein, of Roland, Iowa, got No. 9 for \$33, No. 11 for \$33 and No. 10 for \$26. Mr. F. Frederickson, of Conrad, Iowa, took No. 4 for \$29. Mr. Chas. Beerman, of Webster City, paid the following prices: For No. 7, \$35; No. 17, \$26; No. 5, \$51, and No. 8, \$30. Mr. W. C. Bowen, of Garwin, Iowa, got No. 16 for \$52.50.

AN UNUSUAL ANGUS OFFERING AND OPPORTUNITY.

In the auction to be held at South Omaha, May 1st, under the management of Mr. W. C. McGavock, of Springfield, Ill., Mr. W. A. McHenry, of Denison, Iowa, who has bred and exhibited more prize winners than any man in America, consigns ten bulls and seven females, representing the blood of his most famous prize winners. Mr. C. J. Off, of Peoria, Ill., who owns one of the most highly-bred herds in America and who bred and sold the highest-priced bull in the recent International Exposition sale at Chicago, consigns six bulls and six females. Mr. Geo. Kitchen, Jr., of Gower, Mo., who has won many prizes at the best shows within the last few years, consigns three of his show animals. The sale must be attractive from every point of view, and what we now wish to emphasize is the fact that Mr. McGavock desires some ten or fifteen more good females in good breeding condition and in fit form for the auction. Any breeder or breeders having them cannot do better than to place them in this sale, where the entries of these leading breeders will attract buyers for them. Entries, however, must be sent in at once to Mr. McGavock, as he wishes to get the catalog out early in order to do some advertising with it.

HENRY KUPER'S SHORT-HORNS.

Several years ago Mr. Henry Kuper, of Humboldt, Neb., founded a herd of Short-horns, using much care and spending no little amount of money for foundation stock. From time to time Mr. Kuper has added high-class animals to his herd, paying prices well up in the three figures, until today his herd numbers upwards of 100 head. The Scotch sorts have been brought into the herd where they have bred on until today one-half are Scotch and the balance are Scotch-topped on good, reliable American foundations. Cruickshank bulls have been in service for a number of years, one of the greatest of these being that grand breeding bull, Baron Surmise, a Queen of Beauty bull that was got by Baron Chilton 2d by Imp. Salamis. Then follow such Cruickshank sires as Imp. Harvester, Imp. Goldstick, Orange Lad and others. Baron Surmise did service in Mr. Kuper's herd for about five years and left a line of daughters such as are the delight of every lover of good Short-horns. Before parting with Baron Surmise Mr. Kuper secured the Duchess of Gloster bull, Secret Champion, bred by Messrs. Owens Bros., and got by Baron Secret and out of Champion Duchess by Champion, he by Favorite of Maple Hill by Home Secret. His second dam, 60th Duchess of Gloster, was got by Imp. Chief Baron, a great show and breeding bull of Cruickshank's Clipper tribe. His third dam, Imp. 33d Duchess of Gloster, was got by Gondolier. Then follow a straight line of Duchess of Gloster cows got by such Cruickshank bulls as Chancellor Barmpton Prince, Grand Duke of Gloster and Champion of England. Secret Champion is a grand, good individual, one of the easy feeding kind, thick from end to end, and a bull with plenty of quality. He has now been in service in Mr. Kuper's herd for a year and his get show much promise. Mr. Kuper has each year made a sale and on May 28th of this year he will offer the best lot that have ever left his farm. The Scotch sorts will be drawn on freely. There will be a fine lot of daughters of Baron Surmise included, and those that do not have calves at foot will be well along in calf to Secret Champion. Mr. Kuper has helped the cause

of the Short-horn in Nebraska by taking inside her horders a class of cattle that never would have been there but for the push and energy of just such men as he. Those who are in the market for something extra should arrange to attend his sale in May. Watch these columns for future announcements.

FACTS ABOUT THE "ILLINOIS."

The Illinois Dairy Separator is built in five sizes for farm use and each size may be used for hand or power as desired. The change from hand to power can be made instantly. The Illinois is equipped with the famous turbine disk bowl made of heavy steel forgings, plain inside, no holes or crevices. Its makers claim for the Illinois the utmost strength and durability. It is easy running, a clean skimmer and the capacity is greater than rated. Among the many points of superiority over the old style separators is the patent safety grip clutch, which assists the operator in starting the machine, while the gears on the machine cease turning, all the gears on the machine cease to revolve and the bowl only continues to revolve until the momentum dies down. This is a great saving on the gears, pinions, shafting, etc. The worm wheel and worm run in a continual bath of oil. The work parts of the Illinois are steel forged and extra heavy. The American Hardware Mfg. Co. also manufacture the College Babcock Tester for testing milk and cream; the improved American Screen Door Wheel Catch and the American Shiner, the latter being the only shiner that can be successfully manipulated with one hand. The American Hardware Mfg. Co., of Ottawa, Ill., are manufacturers of the Illinois Dairy Separator, illustrated on page 8. Mention The Homestead when writing them for descriptive material.

TRUMANS' HORSE SALES.

The manager of Trumans' Pioneer Stud Farm, of Bushnell, Ill., writes of the unprecedented number of sales which they have been making, viz.: "Notwithstanding the fact that we had our sale of thirty imported Shire and Percheron stallions advertised which took place at our stables in Kansas City, on Wednesday, March 27th, our sales here at Bushnell have been really better than we had anticipated under the circumstances. Our trade has been better for the month of March than at any time in the history of our twenty-nine years in the importing business. Among our recent sales of imported stallions are, Shire stallion to Cloverdale Shire Horse Company, Titusville, Pa.; Shire stallion to Mr. C. L. Waltz, Spaulding, Iowa; Shire stallion to the Burlington Truman Horse Company, Burlington, Ill.; Hackney stallion to Mr. William J. Mitchell, Lahele, Mo.; Shire mares to Mr. Charles Cappel, Logansport, Ind.; Shire stallion to Ripley Shire Horse Company, Ripley, N. Y.; Shire stallion to Mr. C. E. McPherson, Fairfield, Iowa; Hackney stallion to Mr. Charles Cappel, Logansport, Ind.; Shire stallion to Mr. C. C. Featherby, Yarmouth, Iowa; Shire stallion to Claypool Shire Horse Company, Claypool, Ind.; Shire stallion to Mr. W. S. Root, Sparland, Ill.; Shire stallion to Mr. George L. Levitt, Wilson, Kan., and in addition Mr. Levitt purchased an imported Percheron and imported Shire stallion at our sale last week; Hackney stallion to Mr. W. P. Blackford, Hillsboro, Iowa; Shire stallion to Mr. Robert Mason, Mt. Union, Iowa; Shire stallion to Mr. C. J. Winters, Washington, Iowa; Shire stallion to Berlin Draft Horse Company, Berlin, Iowa; Shire stallion to Mr. H. D. Butterbrodt, Tipton, Iowa; Shire stallion to Mr. Fred Holthy and Mr. Grant Bates, Collins, Iowa; Shire stallion to Deloraine Breeders' Association, Deloraine, Man.; Shire stallion to Dale Bros., Manlius, Ill.; and Shire stallion to Stewart, Sunkel & Collier Co., Paris, Ill. Other sales are, Shire stallion to the Terre Haute Shire Horse Company, Terre Haute, Ill.; Percheron stallion and mare to Mr. N. E. Burton, Port Stanley, Ontario; Shire stallion to Messrs. Perry, Rutherford and Ireland, Deloraine, Manitoba; Percheron stallion and mare to Mr. Jno. Barnes, St.

OUR RED LETTER

Combination Offer

AGAIN OPEN TO THE FARMERS OF THE MIDDLE WEST

FIVE SPLENDID PAPERS and MAGAZINES for \$1.25 A YEAR. SEND US YOUR SUBSCRIPTION TODAY.

The Homestead has never made an offer to its subscribers which proved so widely and immediately popular as did our famous "Red Letter Combination" last season. Thousands upon thousands of farmers throughout the corn belt took advantage of it to supply their families with an abundance of wholesome, instructive and entertaining periodical literature, and we have been asked many times if the offer would again be open to renewals and new subscriptions. Although the profit on such an offer is necessarily small, we have decided to repeat the offer during the present season and have secured the consent of the other publishers interested to advertise it again for a limited time, subject at any time to revocation without notice.

THESE FIVE PUBLICATIONS FOR \$1.25 A YEAR.

The Homestead, the world's greatest farm paper, published weekly at the heart of the corn belt and dealing with agricultural problems from the middle-western point of view; edited by farmers residing upon and operating their own farms; not a one-man paper, but the embodiment of the combined wisdom and experience of a large staff of editors and contributors; with departments covering the whole range of farm life in this section. The Chicago Weekly Inter Ocean, a grand general family newspaper, giving an abundance of news, literature, poetry, humor, market reports, reading matter for women and children—something for every member of the family. The Kansas City Weekly Star, an able, fearless, independent newspaper, dealing with the problems of the day from an independent point of view. Literary contents very attractive and uplifting. The Homemaker, a delightful monthly for the women and children of the farm, readable and valuable from first page to last—brightening and broadening the life of every member of the farm. The Farm Gazette, a beautiful magazine of profitable agriculture, printed on fine paper, with elegant illustrations and a cover in colors. If already a subscriber for any of them, your time will be extended for one year.

To secure this great bargain, clip and fill out the following coupon:

Thomas, Ontario, and Percheron stallion to Hamilton Percheron Horse Company, Hamilton, Kan." See page 38. There are more of them.

GROWING HIGH-PRICED WOOL.

It has been proven by experimental station investigation that dipping adds elasticity to the wool; gives it a fluffy appearance; makes it brighter; gives it a better feel and improves it to such an extent that it will grade considerably higher than where the dipping process has not been followed. The increase in price can be counted as clear profit, for the improvement in your sheep will be more than enough to pay the cost of the dip and the trouble of dipping. If you will get a can of Dipolene in the spring of the year and thoroughly disinfect

your farm buildings, hog pens, sheds, etc., every two or three weeks, you will have the best insurance possible against all animal diseases that are liable to break out after the winter season, during which time germs have been deposited and laid dormant awaiting the opening of the weather to develop their activity. It is a case of where "a stitch in times saves nine" and "an ounce of prevention is worth many pounds of cure." On page 4 you will find an advertisement of one of the best dips on the market—Dipolene—which is manufactured by the Marshall Oil Company, of Marshalltown, Iowa. It is sold on one of the most liberal plans that an article could be offered. Just turn to their advertisement and read their thirty days' trial offer. They don't even ask you to pay a cent in advance, and are willing to bear the expense of freight charges (if your dealer does not carry it) both ways, in case it does not prove satisfactory. Ask for their "Budget of Letters" or booklet and kindly mention The Homestead when you write.

LAST CALL FOR THE COMBINATION SALE OF SHORT-HORN CATTLE AT NEVADA, IOWA, APRIL 11TH.

Homestead readers are directed to the advertisement on page 34 of choice selected Short-horns to be sold at Nevada, Iowa, fair grounds, on April 11th, under the sale management of Mr. E. R. Silliman, of Colo, Iowa. Mr. Silliman is an energetic breeder of Short-horns and is one of the county supervisors of Story county, and contributes eleven head of Short-horns to this sale, principally of the Oxford Duchess family. The other contributors are Messrs. A. J. Graves & Son, of Ames; S. S. Kooser, of Ames; C. E. Klump, of Nevada; Kilwinning & Shaw and Pat Mulcahy, of Colo, Iowa. While it is true that there are no straight Scotch cattle offered in this sale, it does not remove the fact that they are a practical and useful lot. They are all breeding cattle and are guaranteed breeders; in fact when this sale was decided upon it was mutually agreed that no animal would be listed in the sale for which any apology need be offered in any way. The reason of the combination sale is simply this, that none of these breeders possess very large herds, and neither one of them felt like making a public offering and reducing his herd to that extent necessary for this purpose, and for the sake of establishing Nevada as headquarters for Short-horns, these breeders have united in making this their third annual sale the most attractive in their history. None of these breeders are retiring from the business by any means, as they have found it profitable and pleasant. They simply ask a share of the patronage of prospective purchasers who want good business cattle at modest prices. We might add that at the head of each of these herds from which these consignments are made stand choice Scotch bulls. At the head of Mr. Silliman's herd is Claverburn's Ideal, a son of Coming Star and Imp. Petunia 2d. This is one of the best Scotch bulls in Iowa. Mr. Silliman's other herd bulls is Baron Foxglove, a son of Imp. Fancy's Pride and out of Cherry Grove Foxglove by Baron Barmpton. This last named bull is a Cruickshank Brawith

PORTER'S NEW MEADOW KING HAY CARRIER.

The accompanying illustration represents Porter's new "Meadow King" hay carrier. This carrier differs widely in many respects from other machines of this class. The most prominent of these new features is the manner in which the fork pulley is caught and held by the supporting dogs. In this carrier the dogs catch and hold the sheave or wheel of the fork pulley, thereby allowing the greatest range of adjustment with absolutely no friction on the supporting dogs, as the adjustment is obtained by the swinging of the pulley frame on the axle, while the sheave is perfectly motionless when in the carrier. The locking device is a positive force drop and will work perfectly with the turn-table of the carrier in any position. The carrier can be reversed either by pulling the rope through the carrier or by swiveling the turn-table according to preference of operator. Material used in construction is the best malleable iron and steel. The axles are seven-eighths inch turned steel, the rope sheaves have steel bushings and the fork pulley sheave, as well as its frame, is malleable, and is protected from wear by a heavy steel bushing. In producing this new machine it has been the aim of the manufacturer to "go the limit" as regards beauty of design, good material and construction. The J. E. Porter Company, of Ottawa, Ill., will be pleased to mail free complete catalog showing in detail the many new inventions recently placed on the market by them. See advertisement on page 21 of this issue.

## Public Sale of

# SHORT-HORN CATTLE

TO BE SOLD ON

## Thursday, April 11, 1907,

At the Fair Ground at

### NEVADA, : : IOWA

40

The undersigned will sell on April 11th,  
40 head well selected Short-horn Cattle

40

## :: AS FOLLOWS ::

E. R. Silliman, of Colo, Iowa, sells 11 head of females, 7 being the Oxford Duchess family. A. J. Graves & Son sell 11 head, 7 cows and 4 bulls. C. E. Klump sells 10 head, 7 cows and 3 bulls. Wilkening & Shaw sell 4 bulls. S. S. Kooser sells one cow and calf, and Patrick Mulcahy sells 2 bulls. This will undoubtedly be an opportunity to buy some good Short-horn cattle cheap. All of the above breeders are residents of Marshall and Story counties and have placed these cattle in the hands of Mr. Silliman, of Colo, Iowa, who will act as sale manager. Al P. Mason, auctioneer. In writing E. R. Silliman for catalogs, kindly mention The Homestead.

Bud. At the head of the Graves herd for some years has stood Imp. Charmer, a Miss Ramsden bull sired by Evening's Pride and he by Village Pride. We speak of these bulls and their superior breeding in order that the public may know that the choicest Scotch blood has been maintained at the head of these herds and that these females offered are bred to bulls of this character. Mr. E. R. Silliman, of Colo, Iowa, is the sale manager and will take pleasure in forwarding catalogs and furnishing any and all information that may be requested of him by Homestead readers. Col. Al P. Mason, of Union, Iowa, is auctioneer. This date should not be omitted, as it is an ideal one, coming just at the time when cattle are ready to go on the grass and be released from their winter's quarters. The Homestead predicts that this will be a good place to buy some good, useful cattle at very modest prices.

### CRICKSHANK SHORT-HORNS

Homestead readers for some twenty years at least have known through these columns of Mr. M. D. Yard, of Crawfordville, Iowa, and his Short-horn cattle. About nineteen years ago Mr. Yard added to his contingent some of the best Cruickshank and Scotch females from the then prominent of Messrs. Wm. Cummings & Sons, of Buda, Ill. This was at the time when Royal Duke of Pleasant Ridge headed the Cummings herd. Brawth Bud and Wimple were the families secured, and from them Mr. Yard propagated the present large herd of Scotch cattle. Besides those on hand he has sold large numbers at both public and private sale. He now has more than seventy-five Short-horns on hand and wishes to sell about a carload of cows and heifers and a few young bulls. One splendid young bull is Fairview Bud Royal 259037, he by Lavender Royal and out of a Cruickshank Brawth Bud cow. This bull has been used on some of the best cows and is all right in every way. He is a solid red, of good length, is very deep and possesses a splendid bull's head chock full of breed character. His other herd bull is Wimple's Royal 241400 by Lavender Royal and out of old Wimple 25th by Royal Duke of Pleasant Ridge. This is a splendid red bull, four years old, that Mr. Yard would like to exchange for another Scotch bull of equal value. It will take an extra good bull to interest Mr. Yard in an exchange. He has a splendid red yearling bull to sell, out of Geurostly 3d by Wimple's Royal. This is a Brawth Bud bull and a good one. He will be sold worth the money. He has two good farmer bulls, Scotch topped. See his card on page 36.

### ANDREW COUNTY SHORT-HORN BREEDERS SELL AT SAVANNAH, MO., ON APRIL 12TH.

The breeders of Short-horn cattle in Andrew county, Missouri, have organized a county association in order that they might better promote their breeding interests, and will hold annual sales in order to dispose of their surplus stock. On Friday, April 12th, the first of these sales will be held, and Mr. H. R. Coffey, secretary of the association, will manage the sale. The contributors are Messrs. R. A. Coffey & Son, Savannah, Mo.; J. H. Beattie, Savannah, Mo.; P. W. Hoshor, Savannah, Mo.; Chas. Sweet, Filmore, Mo.; Andrew Johns, Rosendale, Mo.; J. W. Zimmerman, Savannah, Mo.; Sanford Johns, Rea, Mo.; and Chris. Seigfried, Savannah, Mo. In all twenty-six females and seventeen bulls are listed for the sale. The cattle are all good, useful animals, regular breeders and sell as such, as these gentlemen are determined to make these annual sales a go. The breeding of the cattle listed shows quite a variety with the good, reliable Scotch-topped sorts in the lead. Mr. P. W. Hoshor sells ten head, all young Marys topped out with good Scotch blood. They are all females and are granddaughters of such bulls as Imp. Chief Steward, Scotchman, Grand Victor 3d, Velvet Prince and Imp. Aylesbury Duke. Three are yearling heifers; the remainder are cows well along in calf. They are cows that are money makers from the word go and should be looked after sale day. Mr. J. W. Zimmerman also sells ten head, three bulls and seven females. They are all but one granddaughters and grandsons of Violet's Galahad, a son of old Galahad, and Combination 2d, a Belows-bred bull that was got by Scotchman. The one not by these bulls is a Young Mary that was got by a son of Kirklevington Duke of Hurst 11th. Some mau hunting a straight Dates should watch this three-year-old cow. Messrs. R. A. Coffey & Son sell four bulls and two females. Heading their bull offering is their Scotch herd bull, Cashier. He is a good roan, six years old and a breeding bull, as is shown by the many daughters Messrs. Coffey & Son are keeping and his get that go in the sale. In breeding

form Cashier weighs right at 2,200 pounds and is an impressive individual. He is of Cruickshank's Violet tribe and was got by Victoria Chief 2d. His dam, Violet's Valentine 10th, was got by Imp. Burgomaster, he by the great Dunblane by Roan Gauntlet. Violet's Valentine, his grandam, was got by Imp. Baron Victor and was out of Imp. Violet's Bud. Cashier should please some man hunting a proven sire. He will have two sons and a daughter in the sale and all are good. Mr. J. H. Beattie sells three cows and three bulls representing some of the most valuable American-bred sorts topped off with good Scotch sires. Mr. Andrew Johns sells four young cows and a coming yearling bull. The cows are just coming of serviceable ages and buyers should look after these. Mr. Johns has used good foundation stock and his cattle give returns wherever they go. Messrs. Sanford Johns, Chas. Sweet and Chas. Seigfried complete the list of consignors and each sells animals that should be appreciated. The last announcement of the sale will be found on page 39. Breeders, as well as farmers, should attend this sale and encourage the efforts these gentlemen are making to push their favorite breed. There is still time to get a catalog and if you have not received one write to Mr. H. R. Coffey at once and kindly mention this paper when doing so.

### RHEA BROS.' PERCHERONS.

One of the good horse firms that has rapidly come to the front in the West is Messrs. Rhea Bros., of Arlington, Neb. The boys have been conspicuous winners at the Nebraska State Fair the past few years and they carry a line of horses that the people seem to want. They have a grand lot of home-bred horses on hand, besides a few imported stallions. They are now offering their splendid four-year-old gray stallion, Carlo, the first-prize stallion at the Nebraska State Fair and also at the Interstate Fair at Sioux City, and he is a good one. He will weigh 2,100 pounds and is in only good breeding condition. They are also offering Frueen for sale, their second-prize stallion at these same fairs. He is coming five years and will weigh 2,150 pounds. Aigton, a coming four-year-old, and third-prize horse at the Interstate Fair, is also offered for sale. They have about fifteen head of aged stallions on hand, thirty extra good two-year-olds and twenty-five coming yearlings. These two-year-olds are a splendid lot. They are all home-bred horses and have been selected with care by Messrs. Rhea Bros. They are a very growthy lot and have a wonderful lot of bone. In fact they have been selected with these objects in view and they will make splendid stallions. Messrs. Rhea Bros. have a couple of good imported horses left that they will price very reasonable. They also have about a dozen good mares on hand and they will price any one of these or will mate them up in pairs. The boys buy and sell their own horses and they handle them on the farm. There is no middlemen's profit in their business and the buyer gets the benefit. They say for us to tell Homestead readers that they will make the prices within reach of all, and to come and see what they have to sell. Arlington is twenty-five miles northwest of Omaha on the C. & N. W. railroad, and they will meet customers if notified beforehand.

### HARDING'S SHORT-HORN SALE—LAST CALL.

The breeder of Short-horns or the farmer who contemplates building up a herd of Short-horns should plan to be present at the fifth annual sale of Mr. F. W. Harding, at Waukesha, Wis., on Wednesday, April 10th. The offerings from this herd during recent years have claimed the attention and presence of probably more Short-horn breeders than any others in this country. The cattle selected for these sales have always been of the very best breeding and have always included many individuals with show-yard honors and others which have won prizes for their new owners. With each succeeding year the offerings have improved, and it is to Mr. Harding's credit that the offering of this year is far superior to those of previous years. With the exception of four head the entire female consignment are safe in calf and a number have calves at foot. The bull consignment is especially strong. Never in the history of Anoka herd has such a lot of bulls been included in one sale. They are from the best sires ever used in Anoka herd and their dams are high-class cows that rank with the best anywhere. The breeder of Short-horns who wants a show bull sired by a show bull with a great pedigree will find in this lot bulls which will please him in every way. The bull offering, unlike that of many sales, is equally as strong as the female. All plain ones have been excluded from the offering. We wish first to call at-

25

### Beau Donald Bulls

Sired by the great Beau Donald 12th 90957, one of the greatest Hereford bulls in America, and out of Wild Tom, Stone Mason, Cudihall, Archibald and Hesled cows. Also have a few good bulls sired by Beau Brighton and out of Beau Donald dams. They are yearlings and two year-olds and are good strong fellows and some good herd headers in the bunch. Come and see them or write us at once.

A. SPOONER,

MONDAMIN, IA.

tention to Sultan Commander. The opportunity is seldom given breeders to buy such a bull as this one at auction. He was got by Whitehall Sultan and his dam was one of the best producing cows ever owned at Anoka. In point of conformation Sultan Commander closely resembles his noted sire. He is deep and thick, very mellow with straight lines and is very nicely covered over crops and evenly fleshed. Sultan Commander is very smooth over the tail and has the fullness and depth of quarter which predominate in the get of Whitehall Sultan. This bull should suit the most discriminating buyers. He combines the blood lines of some of the most noted families of the breed, and such outstanding merit as he possesses should leave no doubt in the mind of any breeder as to his qualifications as a herd bull. In City Marshall Mr. Harding offers one of the best sons of Whitehall Marshall that he ever bred. His dam is Imp. Daffodil 17th, a grand good cow. City Marshall sets close to the ground on good legs, is deep, wide, with an extra spring of rib. City Marshall is very good in heart and in many ways has the strong characteristics of his sire, notably so in the distribution of flesh over back and depth and fullness of quarter. Mr. Harding has always found ready sale for bulls by Whitehall Marshall, but wished to make this the best he has yet offered the public and reserved the best for this occasion. Any breeder can use City Marshall to good advantage if in need of a herd bull and he assured of good results. The Goods is another of the attractions of the sale. He was sired by Whitehall Sultan and his dam, Rose Pearl, is one of the famous Pearllette family which have done much good in the Forbes herd. The Goods was a year old March 26th, is of good size and is particularly strong in top line and carries a good, even width. This bull will no doubt be heard from in the fall shows should he go into good hands. He is deserving of close inspection and will do to head some good herd. The Scotchman is a son of Whitehall Marshall out of a Queen of Scots cow, another of the best producing families of the breed. He is a low-down, well-quartered fellow, with an excellent top and bottom line and a splendid individual all over. He is a very stylish bull and good enough to head some good herd. Gloster King is a son of Whitehall King, a bull which has been used with much success in this herd. His dam belongs to the celebrated Duchess of Gloster family. Gloster King is a thick, deep, sappy bull and will attract the attention of the man who is in the market for an extra good young bull to show the coming season. Another son of Whitehall King is Rob Roys King. This bull will be just a year old sale day. His dam is an exceptionally good cow and this calf is among the best in the offering. An imported bull is also included in this sale. He is one of the best-bred bulls that will go through a sale ring this year. He is a deep, thick animal and will make a valuable herd bull. Again we wish to emphasize the fact that the entire offering is superior to that of any previous year. The catalog will be sent to anyone interested in good Short-horns who will write as per the advertisement on page 39 of this issue. There is not a better-bred herd in America, and if any of our readers are in need of good Short-horns that will make a reputation for them it will certainly pay them to be present on Wednesday, April 10th. Kindly mention The Homestead when writing.

### THE DISPERSION SALE OF BOTHWELL'S CLOVER BLOSSOM SHORTHORNS.

The announcement of the dispersion of the Clover Blossom herd of Short-horns owned by Mr. Geo. Bothwell, of Nettleton, Mo., on Monday, April 22d, should prove interesting to all lovers of the Short-horn who are in the market for Cruickshank, Scotch or Scotch-topped American-bred sorts, the kind that produced winners such as the great Nonpareil of Clover Blossom that was champion in 1900 and 1901. In dispersing this herd Mr. Bothwell gives the public an opportunity such as is seldom equaled, as there are imported cows in the sale that have been held regardless of price. They are not old, worn-out cows, but on the contrary are just in their prime and each sells with calf at foot, besides having yearling and two-year-old daughters in the sale. Then there will be a fine lot of Scotch stuff and the man who wants the most reliable Scotch-topped sorts will find in Mr. Bothwell's sale stock

that will please the most critical buyers. Mr. Bothwell's Rose of Sharon, Princess and Goodness tribes are the kind that have produced a goodly part of the show stock on which he won so many prizes during 1900 and 1901. These American-bred sorts have been topped off with as great Cruickshank sires as the breed has ever known, namely, Imp. Nonpareil Victor and Grand Victor, both having sired many champion winners. Few offerings have ever been made where so many cows sell with calves at foot. Among these the writer recently saw show material that is of the right age and all that is necessary is for the buyer to finish. It will be an opportunity seldom equaled to buy show material at foot. The followers of heavy milking Short-horns should not overlook the event, as there are cows of the dual-purpose character in the sale that will hold their own with any of the special dairy breeds. In succeeding issues we will have more to say of the female section of the offering, as they are the kind that appeal to the true Short-horn man. The hull end of the offering will be light in numbers, but long in quality. Mr. Bothwell's bulls have been such ready sellers that only ten old enough to wean are now on the farm. One-half of these are Cruickshank and Scotch; the balance are from those reliable Scotch-topped cows that have helped make the Clover Blossom herd. Heading the bull offering is the Lavender herd bull, Golden Lavender, that was got by Grand Victor, conceded one of the greatest Short-horn bulls of his day. Golden Lavender's dam, Imp. Sittytan Lavender 6th (one of the greatest cows ever owned at Clover Blossom farm), was got by the great Pride of Morning, he by Star of Morning, that in 1893 won a great number of Short-horn prizes for best bull in Scotland and the Duke of York's medal for the best Short-horn animal. Then follow a straight line of Lavender cows got by such sires as Dunblane by Roan Gauntlet, Pride of the Isles, Count Blicherstille, etc. Golden Lavender is a fine red, a bull of much substance, level to setting on of tail, thick through the heart and lower flank and is exceptionally well quartered. Over crops and loin he is good and he is set on four good, sound legs of the proper length and well set under the carcass. His head impresses one of his ability to sire the kind that, like himself, grow out good and are easy feeders. Some appreciative Short-horn breeder who wants a proven sire that is bred right and breeds right should stick a pin here and go after him sale day. Lavender Stamp, a yearling past, will be found a good, thick, sappy fellow, well quartered, a level-topped fellow, with a good head and horn. He was got by Golden Lavender and out of Clover Blossom Wimple, a daughter of Imp. Nonpareil Victor and Imp. Winnifred 4th by Scottish Archer, a Cruickshank-bred bull that traces through Cumberland to Pride of the Isles. Imp. Winnifred 4th's dam, Winnifred 2d, was by Gravesend. A better-bred bull would be hard to find and he should go to some good herd where a bull of scale and quality is needed. Lavender's Favorite, a nine-months-old son of Golden Lavender, will be found a desirable fellow and will please some man hunting for a lot of quality in an exceptionally well-balanced bull. His dam, Maid of Honor, was got by Grand Victor and out of Imp. Winnifred 4th, grandam of Lavender Stamp referred to above. The greatest young bull in the sale sells with his dam, Clover Blossom Wimple, a daughter of Imp. Nonpareil Victor and Imp. Winnifred 4th. He also is by Golden Lavender. The man hunting herd bull and show material should buy this fellow and his dam. A very promising nine-months-old bull will be offered in the Victoria got by Nonpareil Conqueror, a son of Imp. Nonpareil Victor. He is out of 25th Lynwood Victoria, a Harris-bred cow. Among the Scotch-topped sorts is a roan Lavender King 2d got by Golden Lavender and out of Crystal Ruby 2d. This is a thick fellow, especially good over back, through the heart and is well quartered. Another by the same sire and out of Sharon Bloom 7th will please some man who wants a bull from a heavy-milking dam. In next week's issue the female section of the offering will be dealt with and in the meantime we urge all our readers who are interested in high-class Short-horns to write Mr. Bothwell for catalog, addressing him as per advertisement on page 39. Kindly mention this paper when writing.

April 4, 1907.]

When writing to advertisers please mention this paper.

## Beau Donald Bulls for Sale.

On page 34 of this week's Homestead will be found the advertisement of Mr. A. Spooner, of Mondamin, Iowa, one of the well-known breeders of Hereford cattle. He is offering a bunch of twenty-five head of yearling and two-year-old bulls for sale, mostly sired by his Beau Donald bull, Beau Donald 12th 90957, one of the greatest living sons of that noted old sire. These bulls will range in age from yearlings to two-year-olds, are good, strong fellows, and there are many herd headers among the bunch. These are out of dams by such noted sires as Wild Tom, formerly at the head of the noted Sunny Slope herd; Cadillac, a son of old Corrector; Stone Mason 6th, and other well-known bulls. One of the best bulls that they offer for sale is Max, a son of Beau Donald 12th and out of Violet, one of his very best cows, and he is good enough to go out and head any good herd. Mr. Spooner has a few younger bulls sired by Beau Brighton, a grandson of Beau Brummel, and one of his herd bulls. He can easily fill a car load order or he can sell them singly. This Beau Donald 12th bull is one of the best living sons of old Beau Donald, and a bull sired by him will always be in demand. If any of our readers want a good Hereford bull it will pay them to write or go and see Mr. A. Spooner, of Mondamin, Iowa. Kindly mention The Homestead when writing.

## 50 Poland China

BRED SOWS.

Tried Sows, Fall and Spring Gilts

SAFE in pig for March, April and May farrow to the great boars, Prince Charming 93231, Chief Perfection 1st 48029 and Challenger 81223, great individuals and at the most popular price. Worth the money. If you are looking for a square deal, try me. Address,

J. L. SLICK, Route 3, Lanark, Ill.  
On C. M. & St. P. R. R., 120 miles west of Chicago, 20 miles east of the river.

## POLAND CHINA BOARS

OF the big-boned growthy kind, nice head and ears, sired by a boar with a 10½-inch bone and out of mature dams. They are an extra good lot and will be priced right. Also one yearling that is hard to beat. A big-boned showy hog good enough to head a good herd. O'Brien Bros., Waukon, Iowa.

possible for SPOT CASH TO BUY IN ENGLAND. THIRTY-SIX SHIRES due to arrive in New York on the S. S. Minnetonka on April 1st. We can show more HIGH-CLASS ENGLISH STALLIONS AND MARES than all competitors combined. Come and see these GOOD COLORED, HEAVY-BONED SHIRES, weighing up to 2,300 pounds. They will cost you but little, if any, more than others want for stallions that have been culled over all fall and winter. COME AND SEE THE SHOW-YARD PROSPECTS BEFORE BUYING. IT WILL DO YOU GOOD. A guarantee with each stallion that has stood the test for twenty-nine years. Address for catalog.

TRUMANS' PIONEER STUD FARM,  
BUSHNELL, ILLINOIS.

## THE LAFAYETTE STOCK FARM

J. CROUCH & SONS, Props.  
Lafayette, Ind.

Our sweeping victories at all the leading live stock shows in the United States is evidence of the class of horses that we handle. At the late International, the greatest live stock show in the world, we won 21 first prizes and 12 seconds, including 3 champion-ships. Our horses are all fresh imported, on which we will put a gilt-edged guarantee that they must be good breeders. All stallions are personally selected by one of the members of our firm and are purchased direct from the breeders in Europe. Our facilities for purchasing and handling stallions are equaled by no other importer and thus we are enabled to handle higher-class horses at less money than our competitors. Our terms are liberal. Importations arrive frequently, insuring buyers a large selection from which to select a stallion.

J. CROUCH & SON.

Departments:

Sedalia, Mo. Nashville, Tenn. Seattle Wash. Sacramento, Cal.  
Have just received a large importation of Percheron and Belgian Stallions and Percheron and Belgian Mares.

## PINE RIDGE STOCK FARM

Has the biggest and best barn in the United States and it contains the BIGGEST and BEST lot of Percheron and French Draft Horses.

The last chance to obtain a colt by SAMSON 27238, as his last colts are now yearlings. Over 150 head of horses showing more bone, size and quality than any similar number in America. TAVERNIER F. 35719 and F. D. 12610 now at head of the stud. Prices below competition.

Barn at Moose Jaw, Sask., Can., in charge of E. F. Maxey.  
L. M. HARTLEY, SALEM, IOWA.

## PETER HOPLEY & SON

LEWIS, IOWA,

Special Prices for  
Next 30 Days.

Percheron, Suffolk, Belgian and German Coach Stallions.

We buy and sell our own horses, keep our horses on our 1,500-acre farm, and are therefore at small expense. No middlemen's profits, and buyer gets the benefit. Our prices for next thirty days cannot be duplicated. Write or come and see us.

## PERCHERONS AND PERCHERONS ONLY.

L. H. Humbert & Son, Corning, Ia.

ARRIVED home with their twenty-seventh annual importation of Percheron stallions this year. 80 HEAD STALLIONS AND MARES now on hand. We can sell you a good horse for less money because we are natives of France and buy our own horses without the aid of an interpreter. Write or come and see our horses. Be sure to see OUR Percherons before buying. Telephone service. L. H. Humbert & Son, Corning, Ia.

## PETERSON'S BLACK PERCHERONS.

FOR \$700 to \$1,000 you can buy of me the best Percheron Stallion that can be bought anywhere. Proven breeders can show colts. Come and see the horses and you will never go away without buying. Good colors, extra bone, and not an unsound horse in the lot.

H. E. PETERSON,

LYONS, NEBRASKA

## HORSES.

# FRANK IAM'S

"TOP NOTCHERS," largest pair of four-year-old Percheron and Belgian stallions in the United States; weight, 5,080 pounds; winners of first prizes and SWEEPSTAKES prizes (over all) at Nebraska State Fair, 1906. A pair of "NUT CRACKERS"—"IAMS' KIND," Iams' "HORSE SHOW" at Nebraska, Iowa and Illinois State Fairs WAS the "TALK" of the "PEOPLE AND PRESS." His 2,500-pound Percheron, "TRALLALA," defeated the "CHAMPION WINNER," "BIBI," of France at Iowa State Fair. Iams stirred up "THE ANIMALS HERE," "THEY SAT UP AND TOOK NOTICE" of his WINNERS and SONS OF WINNERS. He HYPNOTIZES buyers with "TOP NOTCHERS" at "LET-LIVE PRICES." "Whoa! SHY ANN." Buy a stallion today, save \$300, and get choice of IAMS' BARNS, filled to the roof with

## 75 Percherons, Belgians and Coachers 75

2 to 6 years old; weight, 1,700 to 2,560 pounds; 90 per cent "BLACK BOYS," 50 per cent "TON STALLIONS." All REGISTERED and APPROVED. Mamma, Iams is a HOT ADVERTISER, but he has "THE GOODS." He sells "TOPPERS" at \$1,000 and \$1,500 so good that they need NOT be "PEDDLED" or put on "AUCTION BLOCK" to be sold. He has on his "SELLING CLOTHES;" they fit all buyers. No man with MONEY or BANKABLE NOTES gets away from Iams. He buys, owns and sells more stallions than any man in United States; saves THOUSANDS of DOLLARS to STALLION BUYERS. He is not in the stallion trust. Iams places \$1,000 or \$1,500 insurance.

## \$1,000 SAVED AT IAM'S \$1,000

KEY! What a rich graft these "SLICK STALLION SALESMEN" are working on the honest farmer, selling fourth-rate stallions at \$2,000 and \$3,000. Iams sells "TOP NOTCHERS" so good, big and cheap THAT THEY DO NOT NEED TO BE PEDDLED TO BE SOLD. Mr. Buyer, see Iams' stallions yourself. Take no "GOLD BRICK STALLION SALESMAN'S WORD." Iams has "THE GOODS," you read about. His establishment is worth going 2,000 miles to see. Iams makes competitors "holier." He is knocking "high prices" out of the Christmas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. Georgie, dear! Buy a stallion of Iams. His 1,200 stallions are MUCH BETTER than our neighbors paid those Ohio men \$4,000 for. Then I can wear diamonds. Iams speaks the languages, buys direct from BREEDERS, pays no BUYERS, SALESMEN or interpreters, has no two to ten men as partners to divide profits with. Iams guarantees to sell a BETTER stallion at \$1,000 to \$1,500 than are sold to stock companies for \$2,500 to \$5,000 by SLICK SALESMEN, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalog on earth. REFERENCES: St. Paul State Bank and Citizen's National Bank.

## ST. PAUL, - NEBRASKA

### OUT OF THE RING BUT STILL IN THE LEAD

We have been ruled out of the International Fat Stock Show ring in Chicago, and disbarred from the association privileges for one year.

BECAUSE we refused to submit to the decision of one judge, knowing that he, however honest and capable he might be, was selected solely by our only would-be competitor, we being refused another judge to act with this one, drastic action was taken by the superintendent of the horse department, barring us from showing, not only in the German Coach classes, but also in the Belgian and Percheron classes, in which we had several entries, and well prepared for the battle. It is currently reported among horsemen who are on the "inside," that the measures adopted to deprive us of a fair showing grew out of plans laid by an envious breeder. However true this may be, we have reasons to suspect that the generally recognized merits of the Oltmanns breedings and importations have created an uneasiness in certain quarters. In fact, we know of more than one preconceived effort to gain from us by unfair means, that which cannot be fairly gained. In the show world we stand without fear of successful competition.

The individuality given each one of our animals places them in a class by themselves. In our breeding stables, both in Germany and America, every effort is made and with unvarying success too, to bring out most prominently those qualities of equine flesh that have given fame to the German Coach Horse and won for them a high place. On two continents the name we carry stands for excellence, in horse flesh. We are proud of our record as breeders and importers of German Coach as well as Percherons and Belgian breeds. Our buying facilities are unsurpassed. The senior member of our firm, Landschaftsrat O. V. Oltmanns, resides in the German Coach Horse district, and within four hours ride of the Percheron and Belgian Horse district of France and Belgium, and is ever on the lookout for the finest and best old country produces. We buy better horses at less expense than any other importer can possibly do, and for that reason can give you a better horse for less money than you can buy elsewhere. Write us for full particulars or call at our barns at Watseka, Ill., or Ft. Worth, Tex. Though ruled out of the ring we are still in the lead.

OLTMANN'S BROS., Leer, Germany, Ft. Worth, Texas, Watseka, Illinois.

## TAYLOR & JONES'

New Importation

ARRIVED MARCH 9TH.

Our barns are now filled with imported and home-bred PERCHERON, SHIRE and BELGIAN STALLIONS. Don't you know that PUBLIC SALES of stallions only indicate a cheap lot of trash, or that the sellers are men who CAN'T DO A BARN BUSINESS? Did you ever know a merchant to sell groceries at auction? Would you buy a gold watch at auction? We use no slick salesmen to sell our horses. They are good enough and our reputation so clean that we are selling more horses than ever before, which proves our prices are the lowest, our horses the best and our manner of doing business is satisfactory to our patrons. For catalog address,

## TAYLOR & JONES,

WILLIAMSVILLE,

BOX 63,

ILLINOIS.

# LAST CALL **ANOKA'S** Short-horn Offering

HOME FARM,  
**WAUKESHA, WIS.,**  
**APRIL 10, 1907**

## FIFTY HEAD.

**T**HIS being a sale without any reserve whatever of fifty of the best individual and choicest bred Scotch Short-horns that have been sold in a long time, I invite discriminating buyers and all others interested to attend. Practically the entire offering of forty cows and heifers and eleven bulls are the class of cattle I like to keep myself. Strong individuality and of the breeding that is most sought after among the good ones. Remember the most of the bulls are strictly show animals and that thirty-four of the females have calves at foot or bred to Whitehall Sultan, Whitehall King, Anoka Sultan or Red Sultan.

**F. W. HARDING.**

Auctioneers: **COLS. WOODS and BELLOWES.**

H. F. Brown sells at Minneapolis, on April 9th, and H. S. Bright at Chicago, on April 11th.

# DISPERSION OF THE CLOVER BLOSSOM SHORT-HORNS

**AT HAMILTON, MO.,**  
**MONDAY, APRIL 22D**

**10 BULLS**  
Cruick-shank  
Scotch  
Scotch Topped  
See Golden  
Lavender.

**50 Females**  
Cruick-shank

Scotch Topped  
Some Imported

**37** Cows sell with calves at foot or **37**  
are soon due to calve.

Thirteen are heifers not bred. A large percentage of the cows are the get of Imp. Nonpareil Victor and Grand Victor, two as great sires as ever did service in one herd. I wish to call your attention to such cows as Imp. Winnifred 4th, Maid of Honor, Imp. Ethel, Clover Blossom, Wimple and Keepsake. Also to Golden Lavender, as good and as richly bred a Cruick-shank bull as will be sold this year. See his get sale day. Write for catalog, mentioning this paper.

"The traffic of the country is congested beyond imagination. Commerce is paralyzed. Continued it means slow death. We need more cars and heavier trains and more miles of railroad to haul them over. In ten years the railroads of the country have expanded 20% for the handling of business that has increased 110%. From 115,000 to 120,000 miles of track must be built in order to take care of the railroad business of today."—Railroad King James J. Hill in speech to merchants of Chicago.

THE WHOLE world is aghast at the deplorable state into which the seven millionaires who control three-fourths of the main line trackage have plunged the railroads of our gloriously prosperous country.

Originally designed to benefit commerce and the whole people, the railroads have passed into the control of these men whose greed for money knows no bounds. Although nearly every large fortune in this country has been made in railroad investments, and although for many years railroad securities have been considered by life and fire insurance companies and by educational institutions as the next safest investments to government bonds, today the moneyed interests of the United States refuse to invest more funds in railroads.

#### Wind and Water.

Over-capitalization has been carried to such a point as to demand a special message from President Roosevelt. The investigations which our fearless executive is making have driven railroad officials to the White House, almost as supplicants for the President's clemency. That information which Mr. Hariman and other financiers hoped to conceal from the people was forced from them by the Interstate Commerce Commission. Mr. Hariman established the fact that the only investors in Railroad stock nowadays who are likely to obtain satisfactory dividends are those who are able to get in on the ground floor. Some of the great railroads of today may be likened to enormous balloons with a few financiers in the basket and hundreds of small investors dangling from the top and sides of the bag.

#### Interest on Notes Precedes Dividends.

Wall Street has long known the conditions, but has said nothing. The European money centers have known so well what was going on that when the railroads needed \$200,000,000 for improvements last summer they had to borrow it in Europe on 6 per cent mortgage notes. This in spite of the fact that the gross earnings of the railroads in 1906 increased \$250,000,000 over the earnings of 1905 and that during the past ten years the earnings of the railroads have increased \$1,335,000,000, while the mileage has increased only 20 per cent. There is no inflation in the figures stating the amount of the traffic. There is no question of the prosperity in the United States.

#### Farming Communities Suffer.

At no time during the past nine years have there been half enough railroads. At the present time millions of dollars are lost to the farming and grazing communities of the country, not because of a lack of markets, but because of a lack of facilities for reaching those markets.

What money the railroads are spending is almost entirely for improvements. New roads must inevitably come from new management and the capital required for the building of new roads must come from the people.

#### New Roads Fortune Builders.

Great fortunes will be made in railroading in the future and made honestly. Never before has there been a time when a new railroad has met with such enthusiastic welcome as it does today and when the building of a new road meets with so little opposition from competitive roads as it meets today. There is business enough for all and to spare. Railroads are earning big dividends on their original capital and railroad investment would meet with as speedy a response from the regular money sources as ever but for the fact that the big railroads have increased their capital far beyond the value of their assets.

#### Rapid Progress on Great Project.

There is in process of construction a new line between our two greatest cities. It is the foremost railroad project in the country. The motive power will be electricity. The track will be straight between Chicago, with its 2,000,000, and New York with its 4,000,000 population.

We refer to the Chicago-New York Electric Air Line railroad, the building of which began on the first day of last September at La Porte, Indiana. It is expected to have cars running on the first 15 miles of this road by the middle of April. Electrical equipment and cars have already been purchased. Within 10 months it is expected that the first section of 50 miles connecting

La Porte with Chicago will have been completed; and a few months later the builders expect to have finished the first division of the road, this division to be 100 miles long, with terminals at Chicago and Goshen, Indiana.

The main line will have no sharp curves and almost no curves at all. The direct line is almost literally the line of least resistance across the country. From Chicago to the Pennsylvania line there will be no greater rise than 16 feet per mile. The line passes through Ohio for a distance of 150 miles in which the fall from the level is not greater than 2 feet per mile. On the whole route the highest rise will be 53 feet to the mile. For more than half its length the track will be laid on level ground. The purpose of this straight track is to save time, to allow greater speed with perfect safety and thus to command the highest class of passenger traffic and almost a monopoly of the fast freight traffic between the two terminal cities.

#### Why the Roads Rambled.

When the early roads were built the passenger traffic between Chicago and New York was inconsiderable. The early railways were freight roads and a glance at any railroad map will show the secret of the path taken by the traffic carriers, that is—each road sought out the cities and the water ports between which passed the greater amount of freight. The roads were built before there was any considerable amount of trans-continental traffic from the West and Northwest and at the time when no one foresaw the need of sixty-eight daily through trains from New York to Chicago. Thus it is that the course of the roads now are no nearer the straight line than the course of most of the rivers running through the same territory.

#### Alexander C. Miller's Remedy.

In the last eight years the traffic between New York and Chicago has more than doubled in volume, but no new railroad has been built to handle the increased business. As stated above, the money which the present roads are able to raise for improvements is spent on the lines which they are now running. It is too much to expect of them that they should destroy the millions of dollars worth of road bed and equipment which they now have and supplant it with new lines and new equipment as long as the roads as they are now run are paying dividends.

Alexander C. Miller, President of the Chicago-New York Electric Air Line, is a practical railroad man who at the time of his first conception of the first direct line between Chicago and New York, had been for 30 years connected with the Chicago, Burlington and Quincy Railroad in an executive capacity. He was familiar with the history of railroading and with the financial affairs of the railroads. When he found that a direct line between the two cities was feasible, he knew that it should be an electric line.

#### Electricity Reigns Supreme.

All authorities admit that the electric road furnishes the best transportation. And the expense of operation on the long distance electric lines is only about 55 per cent of the gross earnings, while on the steam lines in similar territory the expense of operation is about 69 per cent of the gross earnings. In 1906 the Aurora, Elgin and Chicago Electric Railway, which is about 57 miles long, paid 5 per cent interest on a bond issue nearly equal to its entire capital stock, paid dividends on its preferred stock and had enough left for a 3½ per cent dividend on its common stock.

The character of the territory through which the first division of the Chicago-New York Electric Air Line passes guarantees the lightest running expenses and warrants the builders in banking on the investment possibilities of the first division considered by itself.

To increase the profits of a railroad it is necessary to increase the business or to reduce the expenses. So well satisfied have the railroad experts become that the electrification of a railroad both increases business and reduces expenses, that, notwithstanding the enormous expense entailed in destroying steam equipment and installing electrical equipment in its place, we find the New York Central, the New York, New Haven & Hartford, the Baltimore & Ohio, the Erie and the Pennsylvania Companies are rapidly extending electrification of their lines.

The New York Central already has 35 electric locomotives and nearly 200 motor cars in commission and is spending not less than \$70,000,000 for electrical equipment. When all the projected electric interurban lines are completed it will be possible to ride from Portland, Maine, to Omaha, Nebraska, under electric motive power.

#### Developing Small Towns.

Unequaled as they are for passenger traffic the electric roads show great superiority

as the handlers of freight. On the electrified trains each car can be a locomotive by itself and can call at a small town for freight and at large farms for produce. It is to be understood that the main line of the new road will have a great many "feeding" branches.

The fact must not be lost sight of that the revenue of a railroad comes from loaded cars in motion. There is no money to be made in sending an engine after "empties." With each car furnishing its own motive power, each car can take care of itself; and a hundred or more of these loaded locomotives can gather at some central point into a long train and thence go whizzing across the continent.

#### Cheapest Fuel—Greatest Speed.

The motive power of the electric roads can be furnished from the burning of the very cheapest coal. This is not suitable to the steam roads. Electric power can be delivered to the trains without waste and can also be sold to the manufacturing plants and farmers along the route at a profit.

For developing railway speed the advantage of electrification over steam has been indisputably established. The electric locomotive can get up full speed much more quickly, can draw a heavier train and can maintain for long distances an average speed of 90 miles an hour on a straight track with less danger than comes to the passengers on the steam train going at 45 miles an hour.

#### Endorsed By Foremost Weekly.

Since the foregoing was written the writer has picked up his copy of the Outlook, issue of March 23d, and finds on page 629 of that most conservative and high grade weekly the following editorial:

"Railway freight facilities must be brought

up to present commercial demands upon them. Mr. Hill, President of the Great Northern Railway, has stated that the necessary increase in trackage, terminals, locomotive and cars, would cost a billion dollars a year for five years. But this is not all. When that money is spent, it would only even up freight facilities to actual demands. There would be no provision for an inevitable future and increased demand. That future may be provided for in two ways—first, by enlarging the present standard track gauge; secondly, by a general electrification of all our railways. The first plan is practically impossible.

"A general electrification of American railroads would need but half the sum necessary to increase the gauge and rolling stock. Furthermore, it could be instituted without interrupting traffic. Again, electrification provides both increased speed and cheaper motive power. Finally, the freight trains of the future may be at least a mile long. Such a train could be profitably operated only by electricity and under the multiple unit system, by which the breaking in two of a train, now occurring with too great frequency, would be largely prevented. The number of engines would depend on the grades, as now, but would of course be several times the present number, and, distributed throughout the train, would be unified and managed by the operator at the head of the train. Thus every indication is that the congestion of the railways and all the attending difficulties of operation are likely to be greatly relieved by the rapidly widening application of electric power."

#### The People Build This Road.

Now, let us come back to the Chicago-New York Electric Air Line Railroad. This is the investment opportunity of the people. It is independent of Wall Street. No methods of high finance will characterize its management. Mr. Theron C. Bates, formerly General Superintendent of the Chicago & Alton Railroad, is Secretary and Treasurer of the Air Line Corporation which has appointed the Hancock Company as sales agent for the stock. The Hancock Company has officers in nearly every large city in the United States and its field agents go everywhere.

The offer of stock has met with the heartiest response in all quarters and every investor has had, or will have, an equal opportunity with all others who buy at the same time. There is no preferred stock, no bonded debt on which interest must be paid. As money comes in it is devoted to the expenses of construction. The road will be started without debt. Everything will be owned free and clear. At par the stock will sell for \$100 per share, and it will soon reach that figure, unless the nine advances

which the stock has had in the last six months mean nothing.

#### Value of Stock Advancing.

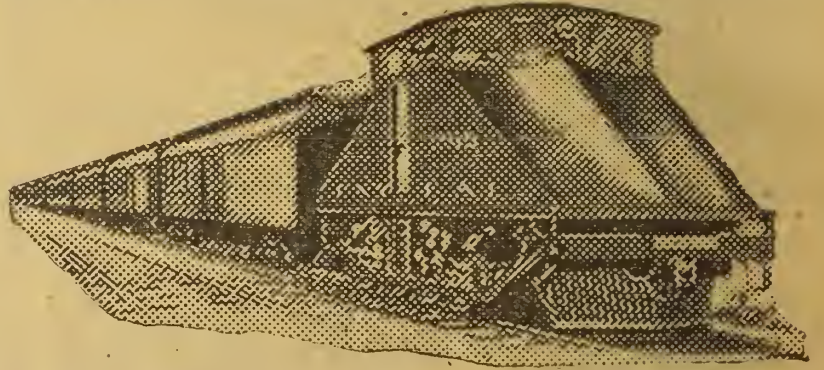

In order to stimulate the interest of the people and facilitate the raising of funds for construction work the stock has been offered at much below its par value. The first allotment was offered in September for \$25 a share; in December the price had advanced by successive stages to \$30; in February two more advances brought the price to \$40; on March 16th the shares became worth \$45; the price is now \$45 a share, but that price will not hold beyond the 20th of April when it is expected that there will be another advance to \$47 per share. Already those who bought of the first allotment can see that their investment has nearly doubled in value.

For the benefit of those who find it more convenient to buy their shares by easy payments, it has been the policy of the holders of the road to divide payments for the stock, if the buyer so desires, into ten in number. The present allotment of shares only until April 20th may be bought for \$4.50 down and \$4.50 a month for nine months. No interest is charged on deferred payments. During the week just passed over \$100,000 worth of equipment has been purchased. As the tangible assets of the road increase there is, of course, an advance in the price and in the value of the stock.

#### Getting in on Ground Floor.

While this article is in preparation the writer has received a telegram stating that one thousand tons of steel rails have just been purchased from the Cambria Steel Works. Hardly a day goes by without news which means an added value to the stock of the road. What it means to an investor who becomes a share holder in a railroad during the construction period thereof the following extract from an editorial in the Saturday Evening Post will suggest:

"The Great Northern Railway is capitalized without water. As money has been needed during the last nine years, shareholders have taken stock, paying in the par value. Each time these 'rights' to subscribe to the new stock at par have been salable at a large premium. The aggregate market value of the 'rights' thus accruing since 1898 has amounted to \$25 a share, besides which the regular cash dividends have amounted to \$61 a share. The extra dividend to stockholders in the form of ore-lease certificates raises the total to \$398 a share. The Great Northern runs over mountain ranges where construction and operation are expensive, and through sparsely settled regions. We merely mention this as indicating that railroading, for those who can get in on the ground floor, without having to pay for water, is not an entirely profitless enterprise."

#### Buy Stock Now.

The Hancock Company, General Agent for the stock of the Chicago-New York Electric Air Line Railroad, have principal offices in Boston, in the Old South Bldg.; in New York, in the Flatiron Bldg., and in Chicago, in The Temple. Readers of The Homestead can obtain much valuable information in regard to the new road by dropping a line to the nearest office.

Look at this proposition carefully. It is not necessary for you to take in all at once the limitless earning possibilities of the great modern railroad which will connect our two greatest cities with their six millions of population and with such a surplus of business as they have never known. It is not necessary for you to consider that this electric railroad will cost less to build and less to maintain than the present steam roads; nor that this direct line between the two great business marts will cut down the distance between them to 750 miles and the run to 10 hours. Simply regard the road as a profitable investment, division by division. You will find it the foremost investment enterprise open to the American people.

For the benefit of the readers of The Homestead who wish to invest in this stock, we have offered time-saving coupons. Sit down now, fill out one of these and send it along. The information it will bring will be wonderfully interesting and thoroughly convincing. Don't let the opportunity slip by.

VOL. LII. NO. 15.

DES MOINES, IOWA, APRIL 11, 1907.

WHOLE NO. 2595

### BOARD OF CONTROL PLAN AGAIN DEFEATED.

The last week of the general assembly of Iowa, which has just adjourned, was signalized by a second overwhelming defeat of the bill proposing to establish a single board for the control of the state agricultural college, the state university and the state normal school. The bill had the same history this year as a year ago—passing the senate, but being defeated by a heavy and apparently decisive vote in the house of representatives. The vote by which it was killed this year was fifty-eight to forty-five.

The Homestead has never hesitated to go on record against this plausible but essentially dangerous and vicious measure. When the interests of the farmers of the state are attacked or imperiled in so important a matter, we feel that the paper upon which they most generally rely to defend their cause should speak with an emphasis leaving no doubt as to the farmers' wishes. This prompt and outspoken course has had the desired effect in the past and will, we doubt not, continue to be effective against this undesirable legislation as often as it is pressed for consideration.

It is significant that both defeats of the educational board of control bill have been due to the more popular branch of the legislature, the house whose members are all newly elected every two years and therefore fresh from the people; while the senate, a portion of whose members hold over from session to session, has twice passed the bill. The more closely the members of the general assembly are in touch with their constituents, especially the farmers, the more certain they will be to oppose this un-called-for innovation.

The plan for this proposed board of control did not originate in a popular demand. Its source has been legislative or political, though we do not believe that any sinister motive has entered into the movement. We freely concede the disinterestedness of its authors and advocates, although we cannot accept their reasoning or the conclusions to which it brings them. It is, however, only just to say that if it is not again brought up until the people demand it, it will probably never be heard of again.

There being no demand among the people for such a change, it is to be hoped that conditions at the great educational institutions of Iowa will no longer be unsettled by agitation for a single board of control. Let the legislature give the great schools of the state most careful personal attention and accord them generous support, with due regard to a wise economy in expenditures; but let the friends of agriculture be spared the necessity of coming to the defense of interests dear to them and vital to the state every time the general assembly is in session. This ill-advised proposal should be dropped once for all.

It should, however, be clearly understood that if a third attempt is to be made to secure the passage of the measure, it will find itself confronted by a formidable organization of the farming interests, extending into the primaries for the selection of members. If the farmers of Iowa let it be known in advance of the election of the next general assembly that they are unalterably opposed to an educational board of control, both houses of the next legislature will stamp the bill with their disapproval and

make its revival impossible for all time to come.

### WHERE CARELESSNESS IS COSTLY.

Although the department of agriculture finds that there are two or three million more hogs in the country January 1st, this year, than there were last, there are few swine men in the corn belt who can be persuaded that there are as many hogs in the country as there were a year ago, saying nothing of an increase.

A gentleman of our acquaintance who has been breeding hogs for forty years and who is a close observer of conditions, and a man who travels considerably, gave it as his opinion that less than half the hogs were in sight that were on hand a year ago, and he attributes this decrease to two factors, namely, to the free marketing of brood sows and, secondly, to loss from disease.

It is to this loss that we wish to address ourselves at this time. We desire,

however, that it shall be understood in the first place that we do not by any means consider that all loss from swine diseases can be attributed to carelessness. Many a man who has had his herd in the pink of condition has found his loss, when disease once entered it, to be just as heavy as that of his careless neighbor. There are few pure-bred swine breeders in the corn belt who cannot testify to this fact.

However, the carelessness is found in the reluctance of the average man in using ordinary precautionary methods against disease. We will enumerate a few of these:

The first of March should be a general clean-up time. In many cases the fattening hogs are marketed on or about this date, and there is a breathing spell between that time and the first appearance of the 1907 porkers. It is therefore an ideal time to clean out all buildings and sheds where hogs have been located during the winter, and when they are clean give the floors a

good coating of air-slacked lime. It might be well to first give them a thorough sprinkling with a good disinfectant, as that gets into the cracks and crevices and will do deadly work on germ life as well as lice. If the breeding sows appear to have any skin disease, or if they are troubled with lice, by all means run them through a dipping tank or turn loose your spray pump. The idea is to get everything cleaned up so that the little pigs will get the right kind of a start.

Then, throughout the spring and summer months one should keep on hand a good supply of air-slacked lime. Once or twice a month, at least, scatter this around their troughs, eating places and sleeping quarters. In spite of everything one can do hogs will make wallows, and our plan of dealing with these is to keep them well disinfected by the use of a dip. Formerly, we regarded the wallow as a deadly enemy, but since resorting to the plan of adding dip to it our fear has left us and we have found it an excellent method to keep the skin and hair of hogs in good condition. The cost of a few gallons of dip a year or a few barrels of lime is a mere bagatelle compared with what one's loss will be should disease break out in the herd.

Of course methods of feeding are also highly important in keeping down disease, but it is not our intention to touch on it at this time. By taking the precautions that we have enumerated and by seeing to it that no man visits your herd after coming from a farm where disease is prevalent, you will possibly escape trouble nine years out of ten. We have in mind one swine breeder who has raised two or three hundred hogs every year and who has escaped disease for ten years, though cholera has swept away some herds in the neighborhood every year during that period.

### COST OF HAULING FARM PRODUCE.

The United States Department of Agriculture has recently published a somewhat comprehensive bulletin on the cost of hauling crops from farms to shipping points. The figures given in this bulletin were made up from correspondents in 1,894 counties throughout the United States. Six questions were submitted as follows:

1. Weight of a usual medium load of principal farm products hauled to railroad or steamboat shipping point in your county?
2. Usual number of horses or mules used per load?
3. Usual cost of hiring such team, together with wagon and driver, per day for any purpose?
4. What are the principal farm products hauled to shipping points?
5. Greatest distances of haul to railroad or steamboat shipping points by any considerable number of farmers?
6. Time usually taken for the longest round trips by any considerable number of farmers?

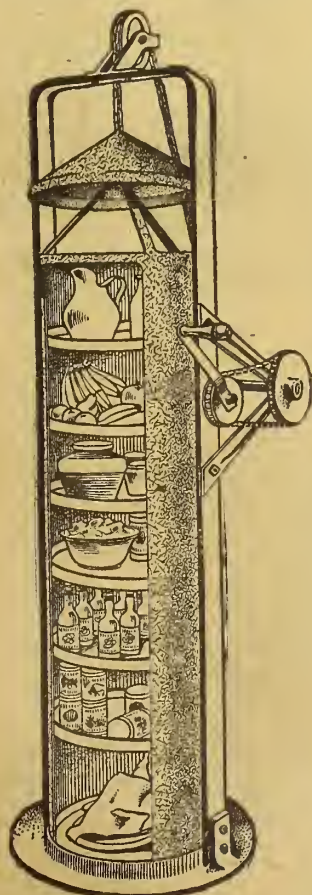

A compilation of the data furnished in these replies reveals a condition of extravagant cost as applied to the hauling of farm materials and shows in addition the enormous amount of freight handled by farm teams.

In the list of values as applied to the loads hauled by farmers we find that cotton stands at the top, with a total valuation of \$556,000,000; wheat next at \$302,000,000; corn next at \$280,000,000, and oats fourth in the list at \$80,000,000. The total value of the twelve principal products grown on the farms of America and hauled in one year reaches the startling figures of \$1,400,000,000.

It costs 5.2 per cent of the value of these crops to haul them to market. For example, in the case of corn it costs

### AN ICELESS REFRIGERATOR.

A remarkable refrigerator that keeps food fresh without ice has been perfected by the Galesburg Cornice Works, of Galesburg, Illinois, under the name, the "Galesburg Iceless Refrigerator." The refrigerator is being installed and used successfully on farms throughout the middle West where ice cannot be readily obtained and even in cities where the iceman calls every day. This refrigerator applies the principle which most good farm housewives use of putting their perishable household supplies into well buckets and lowering them into wells to keep them fresh. The objection to this plan that frequently the supplies are dumped out, spoiling the well water and losing the supplies is overcome completely by this refrigerator. The Galesburg Iceless Refrigerator is moved rapidly and easily by a windlass up and down in a long air-tight tube or casing of heavy galvanized steel.

The tube or casing that holds the refrigerator may be installed either in a well or cistern or it may be buried in the ground at any place convenient to the kitchen. An arch of heavy channelled steel projects above the ground immediately over the casing. It is securely fastened to the platform that covers the well, cistern or hole in the ground. To the sides of this arch are bolted strong, cast-iron arms to carry the windlass. At the crown of the arch is a cast-iron pulley over which a chain or wire rope runs to lift the dumb waiter. One end of the chain or wire rope is fastened to the top of the dumb waiter, the other to the drum or shaft of the windlass. The winch or crank is not attached directly to the windlass shaft but gear wheels and a sprocket chain form the connection, so that the power required to raise the dumb waiter is very small. A child can draw it up or lower it. A cast-iron flange is bolted to the bottom of the steel arch and lag screws that pass through the flange fasten the elevator device to the platform. The flange is provided with a ring one inch high over which a galvanized steel cover fits watertight. This cover closes the top of the tube or casing completely, preventing all surface water from entering. When the dumb waiter comes to the surface it lifts the cover automatically and when the dumb waiter is lowered the cover is left to close the opening. The dumb waiter is of galvanized steel. It is provided with six movable shelves or trays on which the food stuffs to be kept or cooled are placed. These trays may, at a moment's notice, be raised or lowered to suit the height of the vessels that hold the food. The waiter is thirteen inches in diameter and four feet long. The tube or casing that goes down into the well or ground is eight feet long and fourteen inches in diameter. The top of the tube is provided with a cast-iron flange which rests on top of the platform, matching the cast-iron flange of the elevator arch and taking the same lag screws. The lower end of this tube is closed and made watertight. No water can therefore reach the dumb waiter nor can any of the food stuff in the waiter fall or spill out. The tube can be made as long as desired and the wire rope or chain can be lengthened accordingly. The manufacturers of the Galesburg Iceless Refrigerator allow a thirty-day free test of the appliance and have published a very interesting book, entitled, "Keeping Food on the Farm," which they send free. Write for it to the Galesburg Cornice Works, 10E Ferris St., Galesburg, Ill. See page 5.

in Kansas six cents per 100 pounds to market it, in Nebraska seven cents, in South Dakota ten cents, in North Dakota twelve cents, Missouri ten cents, Iowa seven cents, Minnesota eight cents, and Illinois five cents. This variation is due to at least three factors, namely, the average distance from the farm to the market place and, secondly, to the condition of the roads, and lastly the size of the loads hauled.

The average hauling distance in North Dakota is 10.6 miles and in South Dakota 13.3 miles, while in Kansas it is but 7.9 miles and Iowa 6.1 miles.

A study of the tables given in this bulletin by states reveals some very interesting figures. For example, the average load of corn in New York state weighs 2,917 pounds, in Pennsylvania 3,020 pounds, while in Missouri it drops to 2,122 pounds and in Iowa 2,392 pounds. Kansas, on the other hand, is classed up with the eastern states, the average load being 2,908 pounds, while Nebraska is even a little higher, the average load there being 2,960 pounds. Of course it becomes apparent at once that the heavier the load hauled within certain limits the cheaper the cost of transportation. This is why the farmers of Kansas are hauling their corn at a cost of six cents per 100 pounds, while the cost to the farmers of Iowa is seven cents per 100 pounds and to those of North Dakota twelve cents per 100 pounds. In the case of North Dakota the average weight of the load is 1,584 pounds.

The bulletin from which these statistics were taken would interest and instruct those who are concerned in matters of this kind. It is issued as No. 49 of the bureau of statistics and may be obtained by application to the department of agriculture, Washington, D. C.

#### RAPIDLY BUILDING UP LAND.

A subscriber, Mr. John P. Mirsch, sends the following communication:

I would like to ask if you consider it a good plan to sow clover in oats in the spring and plow under the clover late in the fall. Would one get more than the value of his clover seed out of the fertility that would be added to the land?

If a good stand of clover is obtained we are of the opinion that it will pay to sow clover with oats and plow the crop under late in the fall or early the next spring. In round numbers it will cost about \$1.50 per acre for seed to get a stand of clover. It would not be unreasonable to expect that the plowing under of even a few months' growth of clover would add ten bushels per acre to the yield of the corn crop the following year. Of course the increase will to some extent depend upon the natural productiveness of the land at the time of seeding the clover.

There are many men in the corn belt who are struggling with this very problem that is submitted by Mr. Mirsch. For example, where one is obliged to keep his land mostly in corn, for the reason that corn is a profitable crop, and where it has become necessary on account of the increase in insects to rotate, though conditions are not such as to create any great need for meadows, the plan of plowing under the clover crop as suggested above will tide over a difficulty. Of course all men should have clover meadows, and yet there are thousands of farms in the corn belt that do not make a specialty of live stock, but are run on the grain basis, and where this is the case we have no hesitation in advising a trial of this plan.

#### RAPE IN A PASTURE MIXTURE.

The following communication has been received from Mr. H. W. Jones, of Mahaska county, Iowa:

I desire some information about rape. I have ten acres of land adjoining the barnyard that was in corn last year and desire to use this land for hog and steer pasture this fall. Now, would it be advisable to use rape for this purpose?

If so, how should the soil be prepared, and when should it be pastured? Please state how much seed is sown per acre and how soon can it be put in so as to escape frost?

If the steers in this instance were out of the equation we would have no hesitation about advising the sowing of rape. While it is true that steers will consume rape and make fairly good gains on it, yet at the same time there is some danger of bloating, and because of that danger it is used very little as a pasture for cattle.

As a hog pasture we believe that it will pay to use something along with rape especially so where as much as ten acres are to be seeded. By sowing early in the spring, rape at the rate of five pounds per acre and oats at the rate of

six or eight pecks per acre, an early pasture will be furnished and also a late one. If the oats are not kept down by pasturing they will mature in July and of course the rape will come on and make its principal growth after that time.

In case the early pasture is not needed then it might be advisable to sow rape alone on a well prepared seed bed, early in the spring, at the rate of five or six pounds of seed per acre. It is usually advisable to let the crop produce a growth of six or eight inches before turning in, especially so if it is to be heavily pastured. If a good stand of rape were obtained on a ten-acre field and it were allowed a good start it would take a host of hogs to eat it down.

We have known instances where a mixture of red clover, oats and rape sown in the spring gave very good results through the late spring, summer and fall. Of course one must not expect a very heavy growth of clover, and yet under favorable conditions enough will come on to make the mixture palatable and add flesh-forming material to the pasture ration.

#### AGRICULTURAL EXTENSION WORK IN IOWA.

Among the appropriation bills passed by the last Iowa legislature, was one favoring the increase of the sum used in extension work by the Iowa Agricultural College. Last year it was \$15,000, this sum being raised by the present legislature to \$27,000. Early in the session Senator Seeley, of Mt. Pleasant, introduced a bill asking for this amount for this purpose and although it was a house bill that finally passed, this bill was framed on lines identical with Senator Seeley's. In support of this appropriation, Senator Seeley, in addressing the senate, said:

The appropriation of \$15,000 last year is now yielding more revenue to the state of Iowa than any other like appropriation that was made during the last general assembly.

In addition to the short course held at Ames last winter there has been four other short courses held and there are now demands filed with the extension department for twenty more short courses, which cannot be fulfilled unless additional appropriations are made therefore. It was our privilege in southeastern Iowa to have secured one of these short courses at Mount Pleasant, which brought to our neighborhood more enthusiasm than anything that has come to our community for a long time. Our farmers and business men have raised and paid out for the purpose of extending this work over \$3,000. We had enrolled over 350 students, all of which were earnest and enthusiastic in the support of the work.

In addition to the short courses the extension department has aided in the establishment of ten different experiment stations on the county poor farms, and there are now demands for this same work in many other counties. Requests for help in other lines of agricultural work aside from those above enumerated now exceeds 1,500, so you can see the dire need of greater appropriation in this line.

Iowa is one of the leading agricultural states in the union, and it is pleasing to know that the farmers and business men are rising to a sense of duty and urging additional appropriations for this line of work. Our forests and coal mines are fast becoming extinct. Recent experiments have shown that a very large per cent of alcohol can be made from the corn stalks, which are now going to waste, and who knows but what this, or

similar developments along this line of work, may be the solution of the question of our fuel fifty years hence, when our population will have increased to two hundred million and when the principal source of employment and the production of food for these multiplied millions will be the farm to which we must centralize our energies by improved and more intensified methods of agriculture. My only regret is that the appropriation is not larger and I sincerely hope it will receive the unanimous support of this body.

Seeing that so much has been accomplished by the first appropriation that has been made by the state for extension work, it is but reasonable to expect that with increased funds the extension work department of the Iowa Agricultural College will come more nearly accomplishing what the people of the state desire that it shall accomplish.

Professor Holden, who is at the head of the extension department finds that the demand for institute help, for short course teachers, for assistance at county fairs, etc., far exceeds the capacity of the institution to supply and we venture to say that the General Assembly which has just adjourned made no appropriation that will accomplish more than this item of \$27,000.

#### THE CHICKEN-EATING HOG.

The following communication has been received from a Nebraska subscriber, Mr. A. W. Good:

I see that one of your subscribers from Dixon, Ill., wants to know how to cure a hog from eating chickens. Tell him to use plenty of charcoal made from corn cobs and bones, and I think he will have no trouble afterwards. Some time ago I purchased a bunch of hogs that were chicken eaters. We have had them three months, and up to date they show no symptoms of this habit. However, they have access to a pile of charcoal and consume a great deal of it.

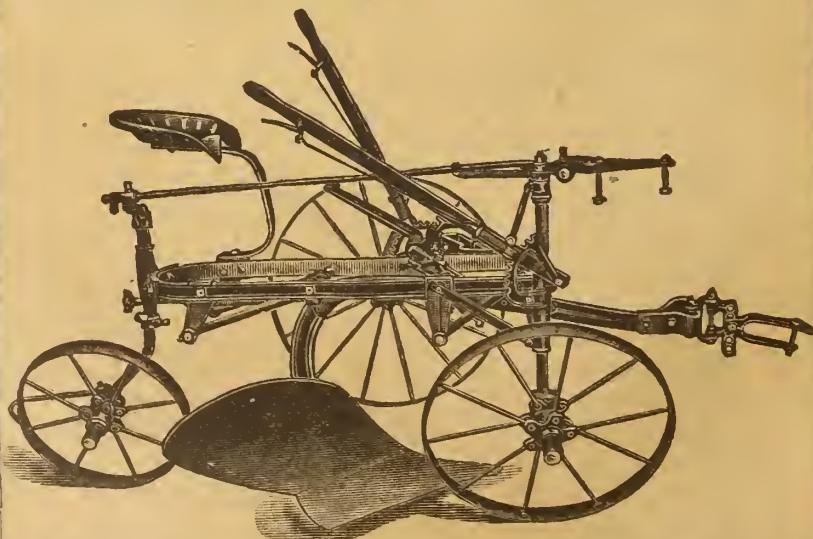

The chicken-eating habit is generally caused by the improper methods of feeding. However, we do not say that it is always caused by that, as we have had instances called to our attention where hogs have acquired that habit, though they were fed in an absolutely scientific way.

Generally speaking, however, if hogs are well supplied with ash material, as well as flesh-forming material in their food, they will very rarely develop this habit.

#### ABOUT THE DISK FURROW OPENER.

The disk furrow opener is undoubtedly a new thing to a great many farmers, but from testimonials which are being received by the Walker Manufacturing Company, of Council Bluffs, Iowa, who handle this furrow opener, very satisfactory results are being secured by the farmers who are using it. The advantage of the use of this opener lies in the fact that it prepares a nice, clean seed bed for whatever kernel is planted in the corn planter. It is used in place of a shoe and consists of two disks which open a nice furrow, throwing clods, weeds, worms and insect eggs to one side. When the planter wheel passes it closes the furrow covering the seed nicely and packing the soil around it. It is reported that by the use of this furrow opener the returns from corn, cotton and sugar cane will be greatly increased. One farmer in Illinois ordered fifty-one of these last year for himself and his neighbors. A scientific test made by the Kansas Experiment Farm showed a gain of eight bushels per acre by its use over corn planted in the ordinary way. The merits of the opener will be fully explained on request if you write to the Walker Manufacturing Company, Ramsey Building, Council Bluffs, Iowa.

#### THE FULLER AND JOHNSON PLOW.

Most of our readers are familiar with the single furrow and gang plows made by the Fuller & Johnson Mfg. Co., of Madison, Wis. Men who are doing their work with an old fashioned walking plow are just as far behind those who are using the Fuller & Johnson riding kind as the Mongolian who uses a sharp stick is behind the man who uses the walking plow. The New Eclipse gang plow made by Fuller & Johnson will do double the work of a single furrow plow with but little added power. This has been brought about by the employment of scientific principles in lessening draft and by the exercise of skill in manufacture. Those of our readers who are thinking of buying either a single or double furrow riding plow should send at once for catalog to the Fuller & Johnson Mfg. Co., Madison, Wis.

#### THE ONLY PERMANENT ROOFING WITH A PERMANENT COLOR

SUITABLE FOR BUILDINGS OF EVERY KIND.

Consider what it means to have a water-proof and ornamental roof which does not require painting.

Color absolutely guaranteed for five years.

Write for samples and prices.

## PATENTS

If you have a new device which can be patented, it may make you a fortune if properly protected. Send sketch or model of your device for free opinion as to patentability. Among our clients who have made money out of their patents we refer you to the following: Wm. F. Gould, Des Moines, Ia.; Wm. H. George, Dexter, Ia.; H. H. Munson, Truro, Ia.; Franz J. Wood, Des Moines, Ia.; Gould Balance Valve Company, Kellogg, Ia.; P. H. Van Gorp, Pella, Ia.; Stocking & Mendenhall, Audubon, Ia.; Wm. W. Robinson, Des Moines, Ia.; Victor Landholm, West Point, Neb.; Samuel G. Scholz, Billings, Mo.; Benjamin F. Booth, Indianapolis, Ia., and many others we will name on request. Upon examination of your device we can tell you whether or not you can secure a patent. We have the largest and best equipped patent offices in the west. We also have Washington offices. As reference we can give you The Homestead and many other papers, any bank in Des Moines, a large number of manufacturing concerns throughout the west, and other clients. If you have an idea, write us for full information as to how to protect it fully.

ORWIG & LANE,  
408 Crocker Bldg., Des Moines, Ia.

## Farm Furrows

Turned by a Practical Farmer.

I think the unsuccessful man should study closely the operations of his successful neighbors and hold his peace.

Considering the wages that are being paid this year there will be many who believe in moon-farming—i. e., working by the light of the moon.

First the bicycle, then the auto, had their try at putting the horse out of business. The next thing will, no doubt, succeed by making them so high-priced that no one but a millionaire can afford a team.

Did you ever meet this man? He lets you understand that his own success is due to his pluck and energy, his failures are caused by bad luck, his neighbors' success is due to good luck and his failures to laziness and cursedness.

And now comes the report that a prominent Iowa town has passed an ordinance requiring able bodied unmarried men between the ages of twenty-five and forty-five to pay a fine anywhere from \$10 to \$100, according to the degree of their criminal negligence in failing to assume the responsibilities of family life. That looks like an advertisement for the old girls.

There is nothing that gives a farm place such an unfinished appearance as to have half a dozen small, unpainted, weather-beaten buildings scattered around the yards, when the barn and house are neatly coated. I would never advise using good oil and lead on these small additions. They soak paint up like water. Some good whitewash mixture can be applied rapidly with brush or spray and with little expense.

Watch the collars carefully and see that they fit well. Don't expect to use some old worn-out collar on the colt. If an old collar that will fit is not available, then buy a new one. Of course, one must be careful with a new collar, for they blister the shoulder easily. Not every case of sweeney is caused by an ill-fitting collar, but often stumbling out of barn doors will bring on a case. It is always best to put the new horse

## These Are Facts It Pays To Remember When You Buy a Manure Spreader.

**I. H. C. SPREADERS—Corn King and Cloverleaf**—one lever controls every operation. Operator can remain seated from time he leaves the barnyard until he returns.

Self-adjusting, vibrating rake levels the load and brings the manure up squarely to the cylinder.

Cylinder is large and runs easily, and the teeth are long, square, high carbon steel.

Apron is equipped with three sets of rollers attached to slats, running on steel tracks. Is driven from both sides and cannot bind.

Apron drive clutch is automatically thrown out of gear when load is fed out and again when apron has returned. No attention required.

Range of feed is three to thirty tons per acre with ten speeds.

Ends of apron slats are protected so that no manure can work in and bind or clamp the apron.

Driving axle is extra large—made of cold-rolled steel.

Front axle is attached to frame by means of ball and socket joint.

Chain drive, direct from rear axle to cylinder, gives easy transmission of power.

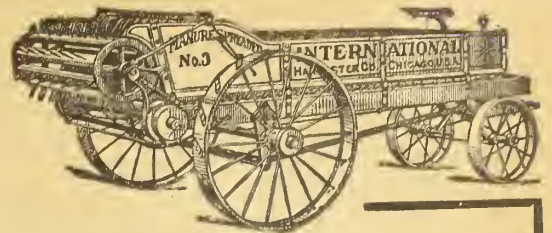

The wheels are steel with staggered spokes. Both rear wheels are fitted with lugs, affording ample traction in wet or frozen fields.

Seat is hinged so it can be turned forward and kept clean while loading.

Box is attached to frame by means of heavy steel cleats.

Frame is made of carefully selected lumber re-enforced at corners by metal braces.

That's a good deal to say of a manure spreader, and yet that is by no means all you should know about I. H. C. Corn King and Cloverleaf Spreaders before you buy.

Those are the main points, and they are sufficient to indicate the superiority of the I. H. C. line. They tell you not to buy a spreader until you have seen the Corn King and Cloverleaf Spreaders.

The key-note in the I. H. C. line is strength and simplicity of construction. Strength in every part means much, for a manure spreader has hard work to do. Simple construction means that it will not get out of order, that it will have light draft and be easily operated. Those are the things you want in a manure spreader.

I. H. C. spreaders are made in two styles, Cloverleaf, an Endless Apron machine, and Corn King, a Return Apron machine; each is made in three sizes.

Call on the Local Agent or write for catalogues.

**INTERNATIONAL HARVESTER COMPANY OF AMERICA, Chicago, U. S. A.**  
(INCORPORATED)

on the steadiest pulling implement. While the seeder pulls light, it is the last place I would put the colt. The unsteady draft over the corn ridges jerks him about a great deal.

A friend of mine sat up four nights trying to bring his incubator up to a temperature of 103 degrees. Ninety-eight was the best he could do. He was about to ship the "consarn" thing back when a neighbor called on him and noticed that the thermometer was on the floor of the incubator instead of on the egg tray. He made the change and, presto, the heat was sure enough there. There is lots in knowing how.

The selection of paint colors for the house is one of the difficult problems which the farmer is confronted with at regular intervals. I think good, substantial colors always look best on the farm, and along with it the quality of the paint should be of a substantial nature, too. There is nothing quite so detrimental to a man's faith in mankind as to find after he has painted

his house or any other building, for that matter, that the paint is cracking and peeling off. It costs just as much to put on poor paint as it does to put on good paint, and the cost of the paint in any event is the least part of the total expense.

Two of the handiest things on our farm are the barrel cart which we use for feeding hogs and the harrow cart.

A good way to protect the roots of young evergreens while planting is to place them in a tub of mud, taking out one at a time when ready to set.

The careless milker who claims that the strainers will remove the impurities from milk, should brush the udders and flanks of eight or ten cows into a pail of water, stir it well and strain until fit for use.

State legislatures of the corn belt have enacted many useful and some useless laws this winter. It were well if there were some way to cut out "freak" legislation. The desire to "father" a bill is the cause of it.

Some men will deny the existence of the dual purpose cow until doomsday, but I can cite you to plenty of Short-horn herds where many of the cows are able to raise two calves and make bouncing big fellows of them, too.

A lady from the city recently visited a farm where Poland China pigs were raised. The owner of the farm told her to come out again in two weeks and they would have roast pig, as the little pigs would then be six weeks old. Quietly to her husband this lady remarked: "I certainly wouldn't eat pigs with black meat." She didn't know that color like beauty is only skin deep.

On all sides can be heard the cry for farm laborers. The city trades seem to be able to pay more than the farm for labor. There may be some significance in the fact. An exchange recently suggested the importation of foreign labor. I know of farms where foreign labor is used exclusively. The men never leave until they are ready to go for themselves, then they induce some friend in the old country to fill their place.

### THE TWO-ROW CULTIVATOR.

A subscriber, Mr. John Crick, sends the following communication:

I wish you would state whether or not the two-row corn cultivator is a practical implement. I have known instances where men have purchased this kind and they are not using them while others who have had experience in handling them believe that it is only a matter of a few years before the single row cultivator will disappear altogether. I wish you would stir up a discussion on this subject and bring forth the views of those who have used the two-row implement.

Almost every argument is in favor of the two-row cultivator as compared with the single row kind. In the first place, the scarcity of help favors the introduction because it means that one man and three horses can do practically the same labor as two men with four horses. In

these days when men are complaining of the difficulty of realizing a profit on high priced land when labor is so high, it seems as though here is one of the best opportunities to reduce the expense of raising a crop without materially decreasing the yield. Even though it is assumed that a few more plants will be destroyed during the first and second plowing when the work is done with the two row implement than where the single row cultivator is used, the showing is still in favor of the double row machine.

Granting that the yield will be cut a bushel or two per acre on account of destruction of plants when the crop is young, there is to offset this, the wages of one man. It is impossible under average circumstances to pick up a good man for two or three months and then drop him when the corn is laid by, consequently there is an expense item amounting to the wages of one man for several months which must be charged largely to the corn crop on the average farm of the Central West. Then again it is often impossible to obtain sufficient help of any kind and many farmers are going through the season at least one man short. In this case the two row corn plow solves a most difficult problem, enabling one man to handle sixty or possibly seventy acres of corn where as half this acreage would hold the average man with a single row cultivator.

We beg, therefore, to throw this subject open for discussion and especially invite those who have had experience with a two row cultivator to give the results of that experience through these columns for the benefit of our readers.

## Get This

### The Fuller & Johnson New Eclipse Sulky Plow

and save yourself and team most of the work. This is the easiest running plow made because all weight is carried on the wheels and there is no land side or bottom pressure. Strong, responsive spring on locking device holds plow

down in hard soil or spring can be set loose to have "Stone Dodger" effect in rough land. Unequalled Foot Lift makes it easy to throw plow high when it is in the furrow. This is the highest Foot Lift in any plow. Share and moldboard extra heavy double shinned and made of the best soft center steel, highly tempered and extra hardened. Will scour in any soil.

In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,  
Des Moines, Iowa.

## LAND ADVERTISING IN THE HOMESTEAD'S CLASSIFIED COLUMNS.

There has never been a steadier or more active demand for improved or unimproved lands than in the past few years; and there are indications that this great movement in the land market will culminate in the year 1907. Those who desire to dispose of lands of any kind will never have a better opportunity to sell them to good advantage than this season.

In view of this unusual situation, The Homestead's department of classified advertising is planning to devote a great deal of attention during the next few months to the subject of lands.

Our special arrangement whereby every classified advertisement in The Homestead is inserted without additional charge in The Farmer and Stockman, of Kansas City, Mo., and The Wisconsin Farmer of Madison, Wis., is proving highly advantageous to land advertisers. The three papers reach 190,000 subscribers and 950,000 readers in the ten great states of Iowa, Illinois, Nebraska, Missouri, Kansas, Oklahoma, Wisconsin, Minnesota, North and South Dakota. The population of these states is more

than twenty-one millions; and nowhere is there a greater demand for land than among the sturdy farmers of this rich mid-western region, and their ambitious sons.

The low price of five cents a word charged for a classified advertisement in these three great farm papers appeals strongly to the land advertiser. There is a minimum charge of \$1.20 even if the advertisement is less than twenty-four words, but this is a reasonable rule on so large a proposition, reaching such a vast number of people. To save book-keeping cash is required to accompany each order.

If you desire to buy, sell or exchange lands or other property, it will be worth your while to investigate our classified advertising department. Read it over and note the large number of land advertisements it contains. Then put your own announcement with the others. The rules governing this department are stated at the head of our classified columns each week.

### The Week in Kansas.

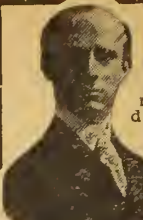

To the Editor of The Homestead:

This week has not been remarkable in any way, but it has been more seasonable. No rain has fallen, which may make it slightly remarkable for the beginning of April, and work of all kinds, as a consequence, has been rushed to the fullest time.

There are some fields planted to corn, but the majority have not yet started their corn planters. Next week will see many commence, if weather holds favorable. Of course there are the same few who rush in and plant a few acres, apparently just for the name of having some corn planted, but we are speaking of the corn raising farmers as a whole. An old saying has it that when the hedge leaves come out, it is time to plant corn, and if there is any truth in that, it is time now for corn to be in the ground. The osage orange hedges are beginning to have a coat of green, something that ordinarily does not come until much later than this. All trees are coming out in leaf fast, while the orchards give to the breeze the sweetest and most genuine perfume imaginable. This is indeed an early spring—the kind old settlers have told us about.

Not very much has been doing but work in the fields. All small grain is sown, and those who raise a few acres of flax each year are now sowing this crop. Ten years ago, flax was quite extensively grown here, but now there is little of it, and the country and the farmers would be better off if none of it was grown.

The soil is beginning to work up a little dry. The winds have sapped the moisture up in a hurry, and we are just now laboring under that question of whether or not it would be best to follow the plows with the harrow. Should

I can prove that the "Knodig" Pitless is the scale you need—if you will give me half a chance. That's all I ask of you. Send me your name and address and simply say you will give the Knodig a 30-day free test. I'll do all the rest. I'll pay all the freight. I'll pay for setting the Knodig right on your premises if I don't prove my case. I'll take all the risk of the Knodig not suiting you. If it doesn't suit you that's my fault and my loss—not yours. I don't ask you to pay me a red cent until you're ready to say "Gumbel, your Knodig Pitless Scale is just what I needed." Do other scale manufacturers give you such a square deal offer as mine? Not by a long shot. They don't dare to. I can afford to do it simply because the Knodig Pitless Scale will stand the test that other scales can't stand.

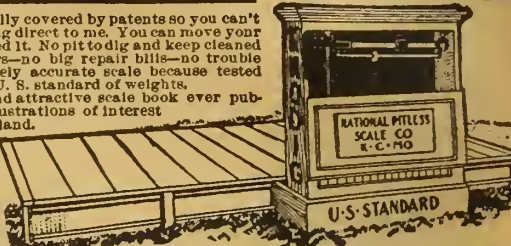

I send the Knodig Pitless Scale from my factory, straight to you, so I save you all dealer's, jobber's and agent's profits. It's the only scale that is good enough to be backed by an unlimited, iron-clad 30-year guarantee. You positively can't afford to buy a scale until you read the big Knodig Book—It's free. Just send me a postal. Read it and then—

Let Me Pay the Freight On a **Knodig** Pitless Scale If It Doesn't Please You After 30 Days' Free Trial

Remember the "Knodig" Pitless is fully covered by patents so you can't buy the best scale made except by sending direct to me. You can move your "Knodig" Pitless Scale wherever you need it. No pit to dig and keep cleaned out—no rusting parts—no rotting timbers—no big repair bills—no trouble at any time, but an ever-ready, absolutely accurate scale because tested and regulated in exact accordance with U. S. standard of weights.

My free book is the most complete and attractive scale book ever published. It contains over 40 handsome illustrations of interest to every Farmer and Stock Raiser in the land. It shows you just how you can save from \$35 to \$50, and at the same time get the best scale made. Send for a copy now. Address me personally like this:—

## MR. GALLOWAY'S NEW CREAM SEPARATOR.

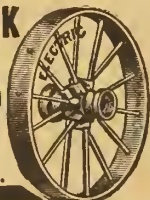

In another column our readers will find an advertisement of the William Galloway Company, where they describe their new cream separator. Mr. Galloway says that his machine has all the good points you will find in any of them. As he offers to allow any one a ten days' trial of this machine he must be sure of the merit of this separator. A liberal guarantee is made on every machine and as a special proposition is made to the first farmer in every section writing we would recommend our readers to investigate this matter. All you need to do is to drop Mr. Galloway a postal, asking for his booklet and special offer. Return mail will bring it. Now, remember in accepting this proposition, you are to be the final judge. It won't cost you a cent if the machine is not exactly as it is claimed to be. It is sold directly to you without any Agent's commission. Address, William Galloway Co., 103 Jefferson St., Waterloo, Iowa. See page 8.

## Wanted Today 1,000,000 Farmers TO INVEST ONE CENT IN A POSTAL CARD

Address it to me.

Say on it.

"Send me your SPECIAL 20,000 Bike Harrow Cart proposition."

You will be glad afterwards, if you do it today.

Yes, sir!

It will pay you big.

I am going to build and sell just 20,000 Bike Harrow Carts for 1907 at a price so low you can't afford to walk. Besides give you a chance on a proposition to get the best harrow cart ever built on two wheels for nothing.

To sell 20,000 carts is a big undertaking, but my proposition is doing it.

It's a little out of the ordinary.

Get in on this 20,000 cart deal while it lasts.

It only costs you one cent to get it.

I then leave it entirely to you if it is not just a little bit the most interesting harrow cart proposition you ever heard of.

Drop me a postal if you don't write another one for six months.

Don't buy a harrow cart anywhere, of any kind, make, or brand, or at any price, until you get my proposition.

I leave it then entirely to you to be the judge.

I know there is no harrow cart built regardless of price, today, that will begin to equal the Bike and meet your requirements like it. The "Proof of the Pudding"

which I send free with my proposition proves that.

It is a high wheeler with positive lock—just right for rough and hilly ground. will turn anywhere without interfering with levers or sections or snaking the driver to pieces.

I have built and sold more harrow carts than all other manufacturers put together and know what is required to make a perfect harrow cart. Sold direct from Factory to Farm. Write me today. It's interesting.

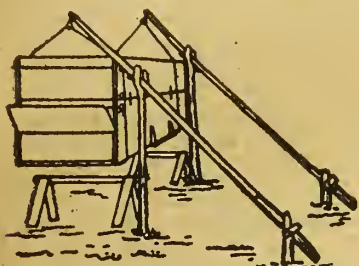

**WM. GALLOWAY, Pres.,** The William Galloway Company, 105 Jefferson Street, Waterloo, Iowa, U. S. A.

# HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

"Enclosed you will find a device which I use for lifting hayracks and wagon-beds from wagon trucks," writes L. D. M., of Conesville, Iowa. In the illustration of this device we have tried to represent the idea to our readers, and for its description we quote from the letter as follows: "The posts which form a fulcrum for the long levers should be eleven feet long and set in the ground three or four feet. These uprights are cut from a tree and have a crotch in which the lever rests. The

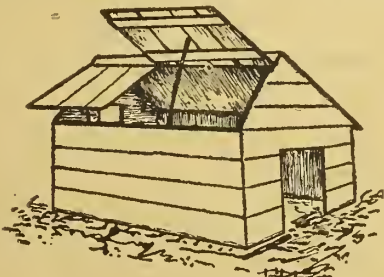

levers are poles fifteen feet long and they rest in the crotch three and one-half feet from the end to which the hoisting device is attached. They may be secured in this crotch by boring holes through the two arms of the crotch and the pole, through which hole a strong iron rod is shoved." Our own opinion would be that this might weaken the lever and it would probably be a better plan to nail cleats on the bottom of the lever which will prevent it from slipping backward and forward in the crotch, at the same time there would be no danger of weakening the same. "The forked posts are set about ten feet apart. The hoisting crane may be made with ropes and chains so that the sling

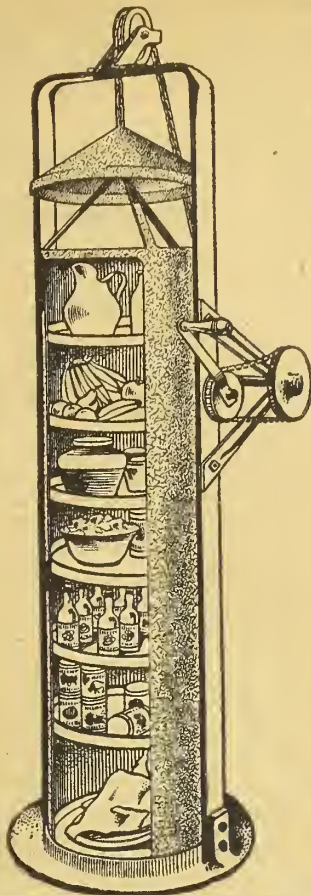

can be easily attached to the box or rack. At the opposite end of the lever, where it touches the ground when the rack is hoisted to its full height, is set a post with an arm, under which the end of the lever can be placed and held in position." The idea is suggested that it would be a good plan to have benches or horses to set under the rack for it to rest on. This would relieve the levers of the strain of holding it into the position that it assumes after being raised from the wagon.

One of our correspondents suggests what appears to be a very good idea for turning screws into wood which is liable to split. It does not always happen that one has the size of bit that corresponds with the size of the screw so that a hole can be bored into wood small enough to fit the screw. In such a case the screw may be turned into the wood a short distance, then with a claw hammer it may be pulled out, which will make the hole about the right size to fit the large part of the screw. This may be repeated until the screw can be turned into the wood without danger of splitting the piece. Another idea which we have seen successfully carried out where it is necessary to drive spikes or nails into very hard wood is that of smearing the nails with ordinary axle grease. It is often possible to drive a nail into hard wood where it is prepared in this manner when otherwise no head-way could be made.

There is more to be learned about the construction of individual hog houses than first appears. It is always desirable to be as economical as possible yet have a plan that will result in a house that can be opened to all the sun possible and one that is handy to give a

farrowing sow attention. A good many of the best breeders are adopting the plan shown in the illustration and wherever used it has delighted the owner. Dimensions are left to the builder, as it is not necessary to have them all the same size, though it is sometimes more saving of lumber. The unhandiness of the V-shaped house has led many to avoid that plan. It requires just about as much lumber as the plan given here and is far less convenient. As is shown, the roof of one side of this pen is hinged at the peak and may be made into one or two doors. These may be raised and when facing the south will allow a flood of sunshine to enter the pen. If the weather is a bit too cold only one can be raised. Further when it is desired to attend the occupants in any way it can be very conveniently done by raising one of the doors. This is impossible in other forms and is one

## A Refrigerator That Needs No Ice

A refrigerator that keeps meat, milk, cream and butter fresh and cold without the use of ice. A refrigerator that doesn't cost anything to keep cold no matter how hot the weather is, that's the

## Galesburg Iceless Refrigerator

The Galesburg will pay for itself in one season by the eatables you save, to say nothing of the saving on ice.

It costs less than a good sized refrigerator and does not cost a cent to keep cold.

It is made of heavy galvanized iron, cannot get out of order, never wears out, can be operated by a child.

We allow you to try the refrigerator for 30 days absolutely without cost to you. If at the end of that time you do not want it, send it back at our expense. The Galesburg is the greatest invention of the age; learn all about it from our illustrated booklet, it's yours for the asking.

Send for a copy today—it's free.

**GALESBURG CORNICE WORKS**  
10 E. Ferris St., Galesburg, Ill.

## LUMBER 1/2 Price

Ten million feet, all sizes, also one million feet iron pipe, machinery, plumbing goods of all kinds roofing, etc. Reference, Merchants - Laclede National Bank. Satisfaction guaranteed or your money refunded. Write to-day for complete catalogue and prices.  
**ST. LOUIS WRECKING & SUPPLY CO., 3867 MANCHESTER AVE., ST. LOUIS.**

of the features that makes this plan of house so satisfactory. The pen may be floored or not as desired.

The sketch of a hog trough and spout for pouring in slop is sent to us by S. S. Laughlin, Kansas. He writes that it is almost impossible to slop a thirsty

bunch of hogs with any degree of satisfaction. To pour the contents of a pail of good, rich kitchen slop over the heads of the hogs is not getting very good results out of the slop. The spout was devised to prevent this waste. It is made flat-bottom, trough shaped and extends from the edge of the trough through between the boards of the fence far enough so that the slop can be poured in it easily. If placed at the right height the swill barrel may be tipped so that the contents may be emptied into the trough without the need of dipping from the barrel with a pail. This idea saves time and labor and is worthy of being put to use.

## More corn means more money

**How to get  
5 to 18  
bushels  
increase per  
acre**

You know as well as we do that if your planter drops too many kernels in the ground at one time, they cannot obtain the proper amount of nourishment from the soil. That means stunted stalks, stunted corn—dollars out of your pocket.

Again if too few kernels are dropped by the planter, the stalks will bear good ears of corn but you lose the yield from the missing stalks. Any good planter will drop two, three, four, five or as many kernels as you want, provided you sort them first with the

## Morecorn Sorter.

It sorts every kernel not only for length and width but for thickness, this is impossible to do by hand sorting. Even a hair's breadth makes a difference in this wonderful machine.

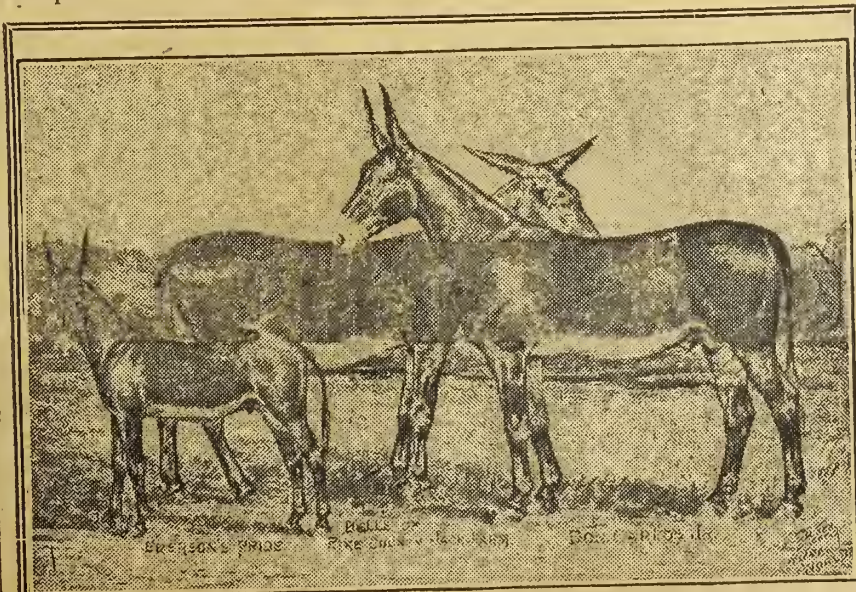

If you sort your seed corn with the MORECORN SORTER, then set your planter to drop 3 kernels, it will drop 3, no more, no less, 100 times out of every 100.

This means 5 to 18 bushels of corn increase for every acre. Does this interest you?

If it does—and it certainly should—sit down while you are thinking about it and ask us to send you our FREE literature.

**Monarch Self Feeder Co.**

95 Main St. Cedar Falls, Iowa

At the famous Pike, County Jack Farm, Green, Mo., there will be found as many been owned at this farm at one time. See and if in the market for jacks or jennets owned by Luke M. Emerson, of Bowling mammoth jacks and jennets as have ever page 30 for Col. Emerson's advertisement write him.

## Uncle Sam's Sheep Dip

is made according to the U. S. formula. It is the up-to-date dip and disinfectant for general use for progressive stockmen and farmers. It is the most powerful non-poisonous germicide. Not only is it the very best, but is sold cheaper than inferior dips and washes.

Prices—1 gal. can, dips 100 shorn sheep, \$1.00; 5 gal. can dips 500 shorn sheep, \$4.00 1 case, (10, 1 gal. cans) dips 1000 shorn sheep \$8.50; 50 gal. brl. dips 5000 shorn sheep, \$40. net cash prices, f.o.b. Minneapolis. Complete directions for use on sheep, cattle, horses, chickens and for disinfecting purposes furnished free.

Booklet of 32 pages, called "Stock Grower's Enemies," sent postpaid for 2 cents. Local Agents Wanted.

No Goods Sold on Credit. Send all orders direct to the manufacturers.

**Northwestern Hide & Fur Co.**  
MINNEAPOLIS, MINN.

## GOOD HARNESS

HOW YOU CAN BUY A FINE \$35 SET DIRECT FROM THE MAKER FOR \$24.

ALL SHIPMENTS ON APPROVAL.

I make all my harness in my own factory right here in Waterloo. I buy all the leather and supplies so I know that nothing but genuine oak-tanned leather is used. I know all my men and every last one of them is a skilled harness maker. My expenses here are low—not one-fifth of what they would be in a large city where most of the harness sold by mail-order houses and local dealers is made.

When you buy from me you deal direct with the maker and that means a mighty big saving.

You take no risk either. All goods shipped on approval and if not entirely satisfactory you send them back

and get your money and we pay charges both ways. As to our responsibility you can refer to any bank or express company in Waterloo or you can look us up in Dun or Bradstreet.

The harness shown in the cut here is our "leader" for 1907. It's a genuine bargain—a splendidly made 14-in. team harness—all of the best grade oak-tanned leather. Just send me the money and the harness will go to you at once with the distinct understanding that I will refund the price and pay charges both ways, if you are not perfectly satisfied.

My big, free Harness Book is full of money-saving offers. Send for it and compare our prices, styles and qualities with what your dealer offers. Write me today. Address R. M. Knox, Free.

Western Harness & Supply Company,  
613 Main St., Waterloo, Iowa.

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion. No insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 950,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## REAL ESTATE.

340 ACRES—Finest stock farm in country; one mile from railroad town, 1/2 mile from school; 170 acres river bottom land, excellent soil for timothy and clover; fine pasture with oak openings, two never-failing streams of water, finest kind of corn land, 40 acres under plow; land all fenced, fine hay meadow. Five-room house, barn 18x50, granary and corn crib 18x24. Price \$15.00 per acre, one-third cash, balance reasonable. Whitney, Rosenberger & Thayer, St. Cloud, Minn.

FOIRD COUNTY, KANSAS—800 acres, all river bottom land; every acre finest alfalfa land; 20 feet to water; all fenced; 400 acres in cultivation, granaries, wells, windmills, two sets nearly new improvements. One, a good six-room house, barn, granary; the other a new five-room house, barn, etc. School house within forty rods from either house. Snap at \$27.50 per acre. Easy terms. Bucklin Real Estate Co., Bucklin, Kan.

120 ACRES—55 plow land; 8 ready to plow; 57 timber pasture all fenced; fine creek through farm; pasture land rolling, heavy soil, clay sub-soil. Buildings in fair repair; log house with frame kitchen, good well; hog and hen house, frame granary, frame barn with basement and two additions; 3 1/2 miles from town, 2 miles from school, 6 miles from railroad town. Whitney, Rosenberger & Thayer, St. Cloud, Minn.

WHY NOT COME to Redwood County, the garden spot of Minnesota? There never was a better time to make profitable investments in improved farms than are offered here now. I have a number of farms with high-class improvements. 600 acres adjoining this town site, \$45 per acre; 150 acres, one mile, \$43; 250, five miles, \$38; 160, five miles, \$30. For further information, write A. J. Weldon, Wabasso Minn.

ARE YOU looking for a home? If so, don't buy before seeing copy of the Real Estate Journal. It has nearly 4,000 farms, city property and stocks of goods advertised in it, and reaches 45,000 readers each issue. Advertising rates 2 cents per word. Send 10c. in silver for two months' trial subscription. Farm and Real Estate Journal, Traer, Iowa.

320 ACRES FAIRM in Sherman County, Kansas. 40 acres creek-bottom land, suitable for alfalfa, 200 acres level wheat land. Two miles to postoffice, school, church, and general store. Ten miles to town of 2,000 people. No improvements. Price, \$10 per acre. Apply to Albert E. King, Goodland, Kan.

AN IDEAL FARM—400 acres about nine miles from the county seat; 250 acres good wheat land, 15 acres first-class alfalfa land, balance excellent pasture land, plenty of living water. This land lies close to school and is A. No. 1 layout, for \$7.00 per acre. Write for list. O. K. Land Co., Meade, Kan.

IF YOU WANT a fruit ranch, if you want to make money, invest in Lake Chelan fruit lands, big developments this spring; new railroad and development of immense water power assured. For information write C. G. Tidout & Co., Chelan, Wash.

EIGHTY ACRES sugar beet land, Hamilton Co., Kansas; 2 miles county seat; 55 acres under ditch, Arkansas Valley land, \$40 acre. Mortgage \$1,800 (trade). E. H. Johnson, Peabody, Kansas.

## REAL ESTATE.

WHY DO YOU GO to the extreme Northwest when you can buy the best kind of land in central Wisconsin much cheaper and be living in God's country under the Stars and Stripes, and be nearer the best markets, such as Chicago, Milwaukee, Minneapolis, St. Paul and Duluth? The land is the most fertile, water the purest and best, and the grazing grasses grown are unequaled in any part of the country. Think for yourself. This is the best opportunity in the United States today; the climate is delightful and conditions such that any man who will work will make big money. Write for lists of improved and unimproved farms stating what you desire. J. W. Gray, New Auburn, Wis.

34-ACRE SUMMIT ITESQUIT—60 rods of lake shore, five miles from railroad town, 50 miles west of Minneapolis, and a fine business already worked up, buildings all in fine repair. Main house, 16x24; L. 16x16; dining-room, 16x24; another house, 16x24; six cottages 12x20 and 12x24; one barn, 16x24; buggy shed and other buildings, nine good boats, 12 or 15 beds. Price, \$4,000, if sold by May 1st; \$4,500 after May 1st. Whitney, Rosenberger & Thayer, St. Cloud, Minn.

OKLAHOMA 25 CENTS—Oklahoma colored new state map and book describing soil, crops, rainfall, climate, church, school and social conditions, with free information mailed on receipt of 25 cents. James M. Powers, Lawton, Oklahoma.

SUMNER COUNTY, KANSAS—240 acres all in cultivation. One mile from town; 160 acres in wheat; small house and barn; best black soil. Good as Iowa or Illinois. Price \$40 per acre. Clark & Whitmer, Conway Springs, Kansas.

160-ACRE FARM in Queen's Valley, Sargent County, North Dakota, 40 acres brooked; no improvements; raises good crops; will price reasonable. Address, T. E. Lawrence, Portsmouth, Iowa.

FARMS FOR SALE in corn belt. Improved and wild lands for homes and investments. Irrigated and northern land. Write for new list. A. W. Baird, Marne, Iowa.

IDAHO, MISSOURI, AND SOUTH DAKOTA. Ranches, farms, and lands, for sale cheap and on easy terms. Write for lists to R. F. Buller, Hailey, Idaho.

FOR SALE—Farms, Reno and adjoining counties, ranches west, special bargain. Write me what you want. A. M. Jewell, North Main Street, Hutchinson, Kansas.

MONEY GROWS in Canada in the wheat fields. I will help you procure these fields. Write me for information. Asberry Singleton, Gladstone, Manitoba, Canada.

FOR SALE—160-acre farms to actual settlers, easy payments. Address, Wm. H. Bush, 243 Adams St., Chicago, or James A. Bush, Amarillo, Texas.

AN IMPROVED 160-acre farm for sale, in Wells county, North Dakota. Inquire of owner, R. S. Christy, Chasely, Wells Co., N. Dak.

A GOOD FARM FOR SALE—160 or 500 acres, three-quarters of a mile from depot. G. H. Watson, Barry, Illinois.

## REAL ESTATE.

CENTRAL MISSOURI FARMS—For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 160 farms described and priced. Geo. W. Hamilton & Son, Fulton, Missouri.

FOUR exchange, merchandise, hardware, houses, blocks, hotels and mills for farms, northern lands for southern farms. Land for sale cheap, improved or wild. American Land & Ex. Co., Minneapolis, Minn.

WANTED—Good farming land, correspondence with owner solicited. Give acreage, produce, location, description, lowest cash price. L. B. Hungerford, Denver, Colo.

BELLEV & CO., Wichita, Kansas, handle the best farms in Kansas and Oklahoma, also timber lands in all parts of the south. Write for list.

OKLAHOMA FARMS—Write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

## SONGS.

"IOWA, BEAUTIFUL LAND" and "Old Flag," two beautiful songs for schools, 15 cents per dozen. Tac. Hussey, Des Moines, Iowa.

## AGENTS WANTED.

AGENTS—Sell automatic self-cleaning chrycomb. Money-making opportunity for hustlers. Write for introductory offer. Clean Comb Co., Dept. 10, Itasca, Wis.

## HORTICULTURE.

STRAWBERRY PLANTS—Unlimited stock of thrifty plants from strain of the most prolific fruit-bearing variety. Satisfaction guaranteed. Immediate shipments. 200 for \$1.00; 500 for \$2.00. V. L. Strawn, Dana, Ill.

STRAWBERRY PLANTS—75 varieties; catalog telling how to grow them, sent free. D. McNally Co., Sarcosie, Mo.

STRAWBERRY GROWING taught at home. Book free. H. T. Schild, Tonia, Mich.

DAHLIAS—Twenty kinds, \$1.00. Catalog. H. Burt, Taunton, Mass.

## GASOLINE ENGINES.

EIGHT Horse Power, Callahan Gasoline Engine cheap; guaranteed. L. Bendit, 1300, W. 11th St. Kansas City.

## HORSES.

FOR SALE—Black and white pony stallion for sale or will trade for good draft colts either grades or registered. Address, Frank Slapnicka, Lowmoor Clinton Co., Iowa.

## PATENT ATTORNEYS.

ROE & ROE, Des Moines, Iowa. Branch in Washington. Send description of invention for free opinion.

ORWIG & LANE, Crocker Block, Des Moines, Iowa. Send sketch or model of invention for free opinion as to patentability. Reference, Homestead.

## CATTLE.

A FEW CHOICE Aberdeen Angus bulls for sale at farmer's prices. Best blood strains. Write or come. Satisfaction guaranteed. James Ferrier, Mason City, Iowa.

TWENTY HEAD of registered Hereford cows and heifers with calf at foot by Doncaster 102834, a son of Lamplighter, very cheap. Frank Festl, Nora Springs, Iowa.

## HOGS.

DURO PIGS at weaning, either sex \$7.00; pairs not akin \$12.00; trios \$16.00. Order now. Hilerest Farm, Bryant Bulfinch, Kansas City, Mo.

## ANGORA GOATS.

WELL BRED Angora goats in pairs or any number to suit. W. L. Dale, Bassett, Neb.

## MISCELLANEOUS.

FIREMEN AND BRAKEMEN on all railroads. Age 20 to 30; over 140 pounds; five feet five inches. Experience unnecessary. Firemen, \$100 monthly, become engineers and earn \$200. Brakemen, \$75, become conductors and earn \$150. Name position preferred. Railway Association, Room 107, 222 Monroe St., Brooklyn, N. Y.

TYPEWRITERS—All makes, all prices. Large stock of 22 makes to select from; prices 1/4 to 1/2 manufacturer's prices. Slightly used and factory rebuilt machines our specialty; full guarantee. We ship on approval anywhere. Write for bargain list. B. F. Swanson Co., 222 Fifth Street, Des Moines, Iowa.

ONLY 15 CENTS IN STAMPS—Swedenborg's "Heaven and Hell," rightly named "The Greatest Work on the Future Life." Paper, 405 pages. Rev. L. G. Landenberg, 3741 Windsor Place, St. Louis, Missouri.

CREAM CREAM! Send us your next shipment that we may convince you that profits will be increased by shipping direct. Des Moines Creamery Co., Des Moines, Iowa.

UNEXCELLED LOCATION for dairyman. Local demand for milk greatly in excess of supply. Chas. S. Choe, Western Agent, 722 Chemical Bldg., St. Louis, Mo.

MANLOVE AUTOMATIC GATE. Send stamp to secure valuable souvenir free. Manlove Gate Co., Milton, Ind.

## Some Essentials in Fitting Hogs for Show

BY WAYNE DINSMORE.

Winners are not made in a day. Men who expect to show at the fall shows, for the many advantages accruing from such exhibitors, have need for preparation now.

The spring pigs that are to make history in the fall fairs are farrowed by this time. Already the eye of the breeder is dwelling in fond hope on some of the most promising youngsters. Their feed and management from now till show time will make or mar the breeder's success; and full often a tritling slip, through carelessness or ignorance, has set back success for a year or more. The suggestions here offered are drawn from a personal study by the writer, of the methods pursued by three of the most successful hog men in America, Ed. Klever, Frank Wynn and N. H. Gentry. Wynn and Gentry won chief honors at the St. Louis Exposition on Poland Chinas and Berkshires, respectively; and Ed. Klever is better known and more widely respected, as a hog breeder, feeder and judge than any other Poland China breeder in America. Their methods represent experiences and success.

In fitting spring pigs for fall shows, it is necessary to begin before they are created; in other words, the sow and boar should have been in the best of condition at mating time, and the sow should have been so fed and managed as to assure that the pigs are strong, vigorous and full of vitality. It is impossible for even the most experienced breeders to make definite selections before the pigs are four months old. For this reason, sows that have litters that show pigs are expected to come from, should have the best care and feed while nursing, in order to permit of the most rapid growth of bone and muscle in the young pigs.

This desired end can best be secured

by permitting sow and pigs the run of a clover or alfalfa pasture, with a small house to sleep in at night, or to take refuge in on stormy days. Besides the pasture, sows and pigs should be allowed all they will clean up twice a day of one of the following rations: (1) Corn one-fourth, oats one-fourth, middlings one-half, mixed with skimmed milk in proportions of one pound grain to three pounds of milk; (2) corn one-third, oats one-third, middlings one-third, with skimmed milk in same proportions as above. Corn and oats should be ground very fine for show stock, and 10 per cent of oil meal can be advantageously

added to both of above rations. Milk is essential. The other feeds in the rations may be changed (though it is seldom advisable, as only the cheapest and most available feeds are included in the two foregoing rations), but no man of experience will try to fit pigs for show without milk, even though he has to establish a dairy to get the milk.

If the litter is large, three feeds a day may be given, but care should be taken to clean out troughs and to feed no more than the sows and pigs will clean up in half an hour.

The pigs thus fed will practically wean themselves by the time they are ten or twelve weeks old, so that the transition period will be free from set back to pigs. About this time selections for show can be made, but three or four of the most promising pigs should be selected for every place where one is to

be shown. This again is done because it is out of the question to foretell exactly how certain pigs will feed out. This does not mean that culls should be selected, but does mean that the best pigs in the respective litters—pigs that are as near alike as peas in a pod—should be given equal chances to develop. Surprises often occur, and those not shown will sell for enough more to pay for the extra cost of fitting.

From the time the pigs are weaned, they should be fed on the same feeds as before weaning; but three feeds per day should be the rule. Such pigs, on full feed, may also be allowed what shelled corn they will eat, as an extra. It can be fed at any convenient time, as at night, just after they have cleaned up their usual slop feed.

During the last six weeks, it is a good plan to make the noon feed consist of wheat and oats, half and half, ground together into fine form. This should be mixed with milk, as in the case of the other grains. Such a mixture, fed at noon, adds variety to the ration.

Yearling boars and sows may be fed on the same ration, and in about the same way, but they need not be fed so heavily. In fact, it is hardly needful to feed them all they will clean up, until the last sixty days; and soaked shelled corn should be given as an extra throughout the whole feeding period, as it is cheaper than the slop feed, and can be used to reduce expense on the older hogs without injurious effects.

In actual feeding, good judgment must be used in feeding the hogs all they will clean up, but no more. Their appetites vary from day to day. On extremely hot, sultry days, very much less than usual will be eaten; on cool, cloudy days much more than usual will be eaten up and utilized. The successful herdsman must ever keep this in mind.

Thickets or numerous shade trees in the lots afford the ideal shade conditions. Where lacking, artificial shades must be provided by placing a few boards over posts and joists, so as to protect the

## No More Sore Necks or Shoulders.

The Humane Horse Collar, which by the way has no resemblance to the ordinary collar, is a new device brought out by the Humane Horse Collar Company, of Omaha, Neb., and is meeting with extraordinary success. As shown in the cut, it has no stuffing of any kind, but is so constructed as to apply the breast collar principal to the shoulder of the horse. All the draft is carried by wide,

strong leather that makes a perfectly pliable surface in contact with the shoulder. It is claimed for this collar, and the manufacturers are willing to prove that it will cure any case of sore neck or shoulders on horses and mules and will make the cure while the animal works. It being adjustable in size one collar fits all the horses on the farm. Farmers who are using this collar are making the prediction freely that it will soon take the place of the old collar for all farm and heavy draft work, in fact hundreds of farmers are laying aside good collars and using the Humane Collar. An interesting experiment is made with this collar by placing the hand under any part of it while the team is drawing a heavy load. This is done without hurting the hand in the least and illustrates why it cures up and keeps the well horses sound. If this experiment was tried with the ordinary collar the hand would be crushed. The world has made rapid strides in most every line in recent years. Why can we not advance in the field of horse collars? The Humane Collars are sold subject to a thorough trial on horses with sore necks or shoulders. The company would be glad to have you write for further particulars to the Humane Horse Collar Company, Omaha, Neb. A descriptive circular will be sent free to any reader who mentions The Iowa Homestead. See advertisement on page 22

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 950,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## PLYMOUTH ROCKS.

THE QUALITY of my White Plymouth Rocks will produce prize winners. My poorest mating is headed with a \$25 male bird direct from Fishel. Eggs from my yards are 15, \$3.00; 30, \$5.00. R. C. Sheffer, Van Wert, Iowa.

BARRED Plymouth Rock eggs. Also a few extra cockerels left. Finest flock of large, big boned, blocky, high scoring, 200 eggs per year producing hens. Low prices. Write me. Mrs. A. A. Berry, Box 26, Clarinda, Iowa.

EGGS FOR HATCHING from Barred Plymouth Rocks, Bright and Latham strains. None better for utility and fancy points. Price \$1.00 per 15; \$5.00 per 100. Eggs guaranteed fertile. J. C. Watts, Berwick, Ia.

HIGH-SCORING White Plymouth Rocks. 94 to 96%. None better. Eggs, \$2.00 per 15, \$5.00 per 45, and I prepay expressage anywhere in United States. Thomas Owen, Poultry Editor, Topeka, Kansas.

BARRED ROCK EGGS from prize-winning strain, guaranteed highest quality; excellent layers, large boned, healthy; circular free. \$1.00, 14; \$5.00, 100. Mrs. D. Paulson, Route 5, Box 88, Harlan, Iowa.

WYSONG'S BARRED ROCKS are finer than silk, none better. Booking orders for eggs. \$3 per 15; \$5 per 30. Satisfaction guaranteed. O. B. Wyson, Cashier Bank of Fithian, Fithian, Ill.

BARRED ROCKS exclusively, choice stock, farm range. Fifteen eggs, \$1.00; 50, \$2.50; 100, \$4.00. Safe delivery and satisfaction guaranteed. Adam A. Weir, Clay Center, Neb.

KENNEDY'S Barred Rocks. Eggs for hatching, \$1.00 per sitting; \$4.00 per hundred. From extra good layers. No culls shipped. Write J. S. Kennedy, Blackton, Iowa.

BARRED Plymouth Rocks exclusively. Large boned, good layers; 15 eggs, 75c; 30 eggs, \$1.25; 100, \$3.50. Satisfaction guaranteed. Mrs. G. W. Saunders, Marceline, Mo.

FOR SALE—White Holland toms, White Wyandotte cockerels. Orders booked for eggs. W. A. Marsh Jr., Alledo, Ill.

hogs from the heat. These artificial shades should not be located in a hollow, but rather on the hillsides or hill-tops, where the breezes are always stirring. Fresh water must be provided in abundance; and wherever possible, wallows, with gravel in bottoms, should be provided. Hogs relish a bath in hot weather, especially in cool water.

Great care should be taken to make the hogs gentle, and they should be accustomed to driving. Young pigs will take exercise enough, if on pasture, as they should be. Yearling and aged boars and sows are sluggish, and must be given exercise every morning before sunrise, if they are to be kept in good fettle on feet and legs. The champion Poland China boar at the St. Louis Exposition owed not a little to his stylish carriage and vigorous movements, which were due to the fact that he had received half a mile of exercise early every morning for four months prior to the show.

Pasture, careful management, good feed well prepared, abundance of milk, and exercise are the essentials in fitting hogs for show. Disregard of any of these is apt to ruin chances of success.

## Effects of Improper Feeding.

To the Editor of The Homestead:

The following communication from one of your subscribers has been referred to me:

I wish you would tell me through the columns of your paper what is the matter with my chickens. Some act as if they had a cold in their heads. Their heads swell; they sneeze, and there is a running off from the bowels. The droppings seem to be white and green and sometimes very offensive. Then their mouths get sore. One day they will seem all right and the next they will be lame and running off from the bowels. I feed hot mash and potatoes with pepper, onions and garlic, chopped, in the morning; also give warm water with copperas. They also have plenty of corn and bone. I have lost turkeys with the same trouble; also guinea fowls.

The trouble with these fowls is improper feeding. Hot mash and warm water are sure to cause colds, roup, and kindred diseases. Copperas should also be used very sparingly, and where specially indicated for some trouble, as it is an irritant poison. The fact that the disease spread to the turkeys and guinea fowls, shows that the handling of the birds was wrong.

My advice would be to kill the fowls most seriously affected, clean and disinfect the quarters in the most thorough

fashion, having a place where any birds showing signs of sickness could be quarantined. Any good roup cure in the drinking water would help these out, if there was any help for them.

A complete revolutionizing of the methods of care and feeding will be imperatively required, if the flock is to be made healthy and money-producing. In the first place, cut out the hot mash. If mash must be given, let them be only warm in temperature. But why not try dry feeding? It is carried on with great success by thousands of poultry raisers, and it saves half the labor, besides increasing health and egg-fertility. It is a clean way of feeding, and its results have won for it hosts of friends and adherents. It is very hard to feed mash in a sanitary manner, or in such a way that the strongest and greediest fowls will not get the lion's share, the weaker and more timid being left out altogether.

The drinking water should never be much more than lukewarm. In very cold weather, it is necessary to take it from the house somewhat warm, but when it reaches the fowls, it should be at the moderate temperature spoken of above. As a rule, keep drugs out of the drinking vessels. The exception is in the case

of roup, or some acute disease, when the easiest and surest way to administer remedies is through the water, the fowls thus taking their own medicine.

Too many potatoes make bowel trouble. Onions, likewise garlic are good occasionally as appetizers, but should not be given daily. Leave pepper and stimulants out of the food, and get back to nature's methods. By thus changing radically the food and drink, I believe these fowls will soon show a decided improvement. Mrs. S. B. Titterington.

The utility qualities are very much what we make them in all breeds. There are strains in all breeds that are good layers, and there are others that are poor layers. It is just so with individual birds in all flocks. If each year we mate only the cream of our flocks, we annually increase their profitability.

The meanest farmer we know of is one who has his wife interested in the chicken business, makes her take full charge, and then sticks the money in his pocket. Yet we heard that same fellow talking down at the village store of how capital oppressed labor.

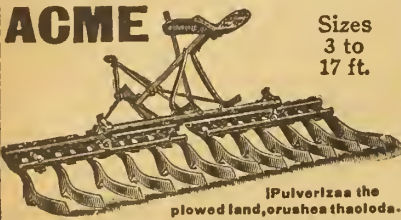

## Try this FREE Harrow

RETURN AT OUR EXPENSE  
IF IT DOESN'T PLEASE YOU.

Here is a harrow that looks very different from the old pike or spring toothed harrow.

It is different. Every point of difference is a point of big improvement. It is as much better than the old fashioned harrow as a modern plow is better than the Indians' crooked stick.

Sizes  
3 to  
17 ft.

Pulverizes the  
plowed land, crushes the clods.

The coulters or teeth of the "Acme" work as a gang plow. They turn over the pulverized ground and give the crop all the soil's benefit. Farmers will tell you that bigger crops grow after an Acme harrowing.

FREE BOOK for your Farm Library.

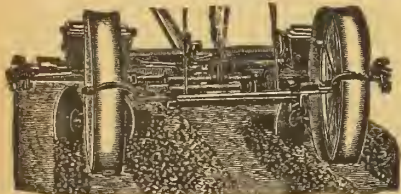

Write us today and we'll send you free, a valuable booklet, "A Perfect Seed Bed." It means money to you.

Ten Days' Free Trial

I Want One Million Farmers To Get My SPECIAL PROPOSITION

When it comes to the machine the Galloway has all the good points you will find in any separator made, and a lot of its own besides. Prove this for yourself. Let me send you my separator on a ten days' trial on my free trial plan. My special proposition and free trial plan make you the most liberal offer possible. I hope you will appreciate this enough to send for my catalog to day. My first letter will explain my whole proposition to you. My catalog will give you my selling plan in full and a complete description of the separator. It will say something besides telling you the Galloway is the closest skimmer and easiest operated machine made. They all claim that. I'll go ahead and prove it and I'll also let you prove this for yourself. Remember that always. You are to be the final judge of the Galloway. It won't cost you a cent, if the machine isn't all I claim for it. It's so simple in construction, so well made and adjustable that you'll think as I do that you ought to have one. Now, of course, when it comes to telling you all about my separator which I am selling direct to you, I must ask you to send for my catalog. It will give you all you want to know. My catalog is my only salesman and one that will save you a lot of money. Send for a postal and say, "Please send me your booklet and your special proposition by return mail."

## OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

### THE RELATION OF AGE TO MILK YIELD.

Sending an aged cow to the shambles when she still has the power to return her owner a fair profit is not displaying good business judgment in view of the fact that her beef value as a rule is less than the annual returns she will bring as a producer of milk and offspring. The aged cow, say from eight to twelve years is a pretty sure proposition. Her ability to make money has been determined and her acquaintance has become established.

She knows your ways and you know hers. If she has produced a good calf right along it is safe to assume, barring accidents to which every cow is subjected, that she will continue to do so for a number of years to come if her health has been preserved. The man who dislikes to break in the heifer should be slow to part with a good cow simply because she is getting along in years. This of course applies to general conditions.

It is generally considered that a cow under normal conditions does her best during the sixth or seventh year. Up to that time both the milk and butter fat content should increase considerably in amount. From this age on to ten years there can be expected a slight increase under favorable conditions, though many a good cow goes backward during this time simply because it is so often thought that she has attained an age where she can shift for herself. Instead of this kind of management, a cow of merit worth keeping should be given good attention for her ability to produce largely and economically is probably as near its prime as at any time before the sixth or seventh year. Many mature cows when on heavy feed are not economical producers though it is a pretty safe rule that where a cow produces abundantly at the pail she is making good use of her ration.

Some authorities state that the increase in the average fat content of the milk which a heifer registers is from one to two-tenths of one per cent each year above the preceding year up to the sixth year. From that point on a little later the decrease begins. High records have been made by cows advanced in years. High feeding to produce early records taxes the strength so severely in many cases that a mature cow fails to do her best had she been developed more slowly. The relation of age to milk yield under average conditions is probably not of very great practical importance to the majority of cow owners.

Selling a Cow on One Test.

To the Editor of The Homestead:

Several inquiries have lately come to the Dairy Department reading about as follows:

I am sending you a sample of milk to have

# 1 1/2 more butter 1 1/2 lbs.

If you can increase your butter production without any increased cost or any more work won't it pay you to do it? And if you can get more butter from your milk with less work, that will be still better, won't it? That's exactly what you can do if you will do as MR. LEITING did—buy a Sharples Tubular Separator. Here's what he says about the Tubular:

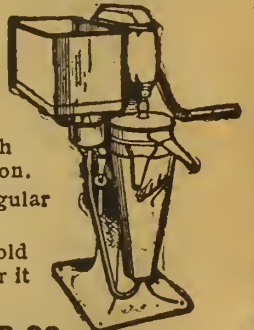

MORE BUTTER  
MORE MONEY

gets all the cream there is in the milk, does it so easy that it's not work to run it at all, and is so simple, with only one little part in the bowl to wash and keep clean that comparison is out of the question.

The extra cream it gets makes the Tubular a regular savings bank for its owner.

All the other good money-making points are told in book F-121, which you ought to read. Write for it today—we'll send it free to you.

## SAVE 20c PER SHEEP ON EVERYONE YOU SHEAR WITH THE

### NEW STEWART SHEARING MACHINE ONLY \$9.75

If you have but five sheep it will pay you to own this wonderful shearing machine. It does not cut or hack sheep like hand shears and gets one pound and over more wool per head. It shears any kind of wool easily and quickly. All gears are cut from solid metal, not cast; all wearing parts are file hard; spindles are ground and polished, and the driving mechanism is enclosed from dust and dirt and runs in oil. 95 per cent of all the shearing machines used in the world are Stewart patents. Send \$2.00 with your order and we will ship C.O.D. for the balance. Our valuable Free Book—"More Profit in Shearing," by the champion shearer of the world, will interest you. Send for free copy and our big new catalogue showing the largest line of shearing machines on earth. It will pay you. Send today. CHICAGO FLEXIBLE SHAFT CO., 234 Ontario Street, CHICAGO.

tested. Please report the test as soon as possible, as I am going to sell my cow on this test.

One test of a cow only shows what she did at one milking which is no indication of the ability or value of a cow.

Different conditions will cause a variation in per cent of fat in cow's milk. In the early part of the lactation period when the cow is giving a large quantity of milk the test is lower than in the latter part of the lactation period. As the milk flow decreases there is as a rule a gradual increase in the per cent of fat in the milk. This may vary from one-half to two per cent, depending upon the breed and individuality of the animal.

The per cent of fat in milk is also influenced by the time between milking. In an experiment where cows were milked at six in the morning and three in the afternoon, the average test in the evening was 4.26 per cent, while in the morning it was 2.3 per cent. Later, when the same cows were milked at 5:30 a. m. and 5 p. m., the fat content of the evening milk was 3.80 per cent and of the morning milk 3.18 per cent.

The first milk drawn from the cow contains less fat than the last milk drawn. In some cases a variation of 10 per cent has been found.

The relation between the nervous system of the cow and her powers of milk secretion is so intimate that any abnormal condition the cow experiences will have a direct influence upon the quantity and the quality of the milk. A cow tested by the writer under normal condition gave milk testing about

## FOR SALE.

One Peerless 16-Horse Engine, one Peerless Separator, Self-feeder and Wind Stacker, also one Joliet No. 2 Cornsheller. This machinery is good as new. Will sell for half its cost when new. Will sell for cash, or write what you have to trade.

W. R. HAINLINE,  
Blandinsville, Illinois

SELL tobacco and cigars locally or traveling. Salary or commission. Full time or side line. Steady work, good pay; promotion. Address, Morotock Tobacco Works, Box 1, 98, Danville, Va.

4 per cent. Once, while in heat, she tested 12 per cent.

Furthermore the value and reliability of a single test is also depending on the honesty and skill of the man who samples the milk. It is very essential to have the milk properly stirred before the sample is taken.

This illustrates how uncertain it is to use the test of one milking as a guide in the buying or in the selling of cows. In order to find the value of a cow it is necessary to weigh and test her milk at

April 11, 1907.]

regular intervals during the lactation period.  
Fred Rasmussen,  
Iowa Experiment Station.

**HANDY MILK CLEANING VESSELS.**

For keeping the family supply of milk and cream from one milking to another there is no vessel quite so convenient and efficient as the ordinary dairyman's pint and quart milk bottles. Too frequently the table supply of milk and cream is curtailed unnecessarily, simply because the morning's allowance for the home is improperly cared for. Even where a refrigerator is not a part of the equipment of the culinary department most housekeepers could insure sweet milk and cream for the last part of the day, where there is difficulty in keeping the supply sweet until supper, if they would use a number of milk bottles to contain what is taken from the morning's supply.

When milk sours sooner than it seems it should it is partly because it has

not been cooled off soon after being drawn, and secondly, because it has not been preserved in clean vessels not easily contaminated from the outside. The milk bottle aids in overcoming both of these conditions. These bottles may be secured from any dairy supply company and at only a few cents apiece when a dozen are bought. A goodly supply of paper or fibre caps should be ordered. Where there is no ice to keep the milk, cool the bottles required for the day's supply by plunging in cold water, strain the milk carefully, allowing most of the animal heat to escape, then bottle. The thick bottles being cool still further reduce the temperature and the caps may be put on and the bottles may be removed to the coolest possible place. Caring for the milk of the day in this manner takes no more time than to place in open jars where there is every chance for the milk to absorb foul odors or vegetable flavors, all of which soon spoil the sweetness. Even where there is an ice chest or refrigerator there is nothing so nice in which to preserve the milk and cream as these bottles. There is no danger of spilling over other food, the milk is rapidly cooled off. When a pint or quart of milk is needed, the whole supply for the day does not need to be disturbed; if a quart of milk is used for each meal each quart has its proportion of cream, and when it comes to cleaning milk vessels a milk bottle is as easily cleaned as any thing. Procure a half dozen of these bottles of the several sizes and enjoy a constant supply of sweet milk the coming summer.

**A Crank on Cleanliness.**

To the Editor of The Homestead:

I have been handling cows for twenty-five years and during that time have made some interesting observations. As a result of my experience, I have come to the conclusion that the making of good dairy products, either butter or cheese, is based very largely on one principle, namely, that of cleanliness.

If dairy cows are healthy and if they are fed good grain and fodder, as they are usually fed on the farms of the central West, the milk from one cow will make practically as good butter as the milk from another. To go further, the milk from one herd may be manufactured into just as high class products as the milk from another. Why then is there so much difference between the produce turned out from the different private dairies and indeed from the different creameries?

Unless one will make up his mind to be clean in every operation involved in dairying, he had better go out of the business because he can never hope to make high-class and therefore high-priced produce.

Not long ago, I was visiting a fellow dairyman and was present at milking time. One of the cows planted her muddy feet squarely in the milk pail, in my presence, and pulled it out again without knocking it over. To my surprise and disgust the milking of that cow was continued in the same pail and the

milk was then added to the general supply.

Now, imagine what kind of a batch of cream one would have after collecting it three or four days where scenes like that are enacted daily. It is absolutely impossible to make good butter when milk is handled by any person or persons who are so coarse in their instincts as to shut their eyes to a filthy act of that kind.

To me, there is no satisfaction in the business of dairying at all unless I know that every one who handles the milk, cream or butter, takes every precaution to keep the product clean. When this is done, you can tell something about what the ultimate product will be. Good milk means good cream and good cream means good butter. The cream will ripen uniformly and butter will come after churning about the same length of time each week.

It is my opinion that the sale of dairy products could be increased at least one-half in our small towns and cities if the public could be educated to think that producers were cleanly in their habits. I find no difficulty in getting a premium of five cents per pound for butter the year around from those who have confidence in my methods.

**A Crank on Cleanliness.****Farm Labor Problem.**

In this day of scarce help and high wages, there is no question in which the farmer is more concerned than in the labor problem. How to get the greatest results at the least cost from hired help is interestingly shown and actually demonstrated in figures, in a forty-eight-page book, published by the American Fork & Hoe Co., 635 American Trust Bldg., Cleveland, Ohio. It will pay our readers to write for this book, which is free to those who mention this paper.

**FREE SAMPLE OF CONGO.**

If you are planning to buy any roofing this spring do not neglect to get a Free Sample of Congo roofing. Congo is sometimes called "the never-leak roof" on account of the way it resists the water, and no one should select their roofing without investigating Congo. Congo is a splendid roofing, and the price is unusually reasonable. (Write for a sample at once, addressing The Buchanan-Foster Company, 538 West End Trust Building, Chestnut street, Philadelphia, or Monadnock Building, San Francisco.

**THERE THEY GO!**

Suppose that every year from five to twenty good pigs should push through a weak place in the fence and say to you a fare-you-well. Would you be satisfied? Or suppose you lost on an average a calf every month through neglect to properly care for them. Would you stand for it? Then look at the procession of little yellow butter-fat globules slipping past you every day in the year—that exceeds in value the pigs or calves from \$50—to \$200—per year according to the size of your dairy. What about it? Isn't that just about your fix?

Rate is \$14 to most North Dakota points. Buy tickets at 512 Walnut St., or Union Station. For further information write W. K. Adams, Dist. Pass. Agent, Des Moines, Iowa.

**Here's Why You Want The Omega Separator**

YOU want the cream separator that will do you the most good—

That's also why you want the Omega—at least we are sure that if you will investigate its good qualities, you will want an Omega.

Because it is different—

A good many persons say we ought to call it the "common sense machine"—And that's what it is—

The separator that embodies common-sense in its construction and operation.

For example.

Instead of leaving the top of the bowl without support—to wobble like a top—we have a bearing at both the top and bottom of bowl.—Isn't that common sense?

Instead of enclosing the bowl in an iron-pot—a filth and germ-breeder—we run the bowl in the open.—Isn't that common-sense?

Instead of forcing the cream through crooked cream tubes at the top of the bowl, we take both cream and skim-milk from the bottom of the bowl.—Isn't that common-sense, too?

Instead of making you wait until the bowl "runs down," we arrange for you to stop it instantly—the minute you have finished separating.—That's more common-sense, isn't it?

Instead of taking 15 to 25 minutes of your time for cleaning, the Omega can be stopped, washed thoroughly, and the bowl and all parts replaced in four minutes!—The most common-sense yet?

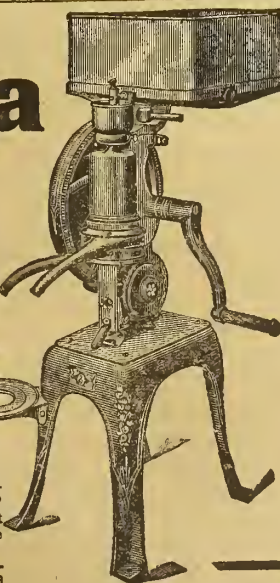

And these are only a few of the many good things about this great machine.

In convenience and reliability, no separator ever made approaches it. In durability it excels. Many users of the Omega have run their separators for 10, 12 and 15 years with practically no expense for repairs. That's a feature worth looking after!

All we ask is the chance to prove these things to you, it's as much to your advantage as to ours.

Send for FREE BOOK on "More Milk Money," also our new catalogue and our "Golden Rule Guaranty." You ought to know more about the Omega.

OMEGA SEPARATOR CO., 35 Concord Street, Lansing, Mich.

## THE PIONEER

Ruberoid is the original smooth surface, elastic, weather-proof and fire-resisting roofing. Many imitations have followed but Ruberoid stands above them all.

Its unusual and unequalled record for durability renders Ruberoid the peerless roofing.

Architects and builders of the highest class recommend it for any style building. Equally serviceable on any kind of a roof.

Used in all parts of the world, in all climates,—on all kinds of buildings.

Contains no tar or paper and will not crack, rot or melt.

Write for samples or prices.

## HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

### DON'T OUT DOWN A FRUIT TREE.

There is a great annual waste throughout the country from the cutting down of fruit trees. Trees that from some cause have convinced their owner that they are useless cumberers of the soil are cut down without hesitation though sometimes with regret for the time and money wasted. It may be that the tree has proved untrue to name and produces worthless or at least inferior fruit. It may be some new kind that was expected to surpass the old kinds and, as often happens, proved inferior to them. It may be that it has stood for a number of years without bearing and its owner believes it barren. It may be that the scale has infested it, that some of its limbs have died and that it is thought to be doomed. No matter which one of these reasons may be influencing you to apply the ax, I ask you to stop and reflect before you make your action irremediable.

Every tree has a value. If the fruit be utterly worthless, the tree nevertheless represents an expenditure of time and money. If it was bought of a nursery, there is the first cost of it; next, there is the labor of setting it; then the cost of cultivating and pruning and caring for it; and lastly there is the use of the ground it has occupied for maybe a dozen years.

All these elements of cost should be considered. They will usually amount to at least ten dollars and often twenty-five. Pause, then, before you destroy your own and nature's work forever and ask yourself if there is not some way to avoid such an extreme measure. There is often a way to redeem such trees and that is by grafting upon them the scions of some other tree. Grafting is not very difficult and even if you have never attempted it, you should not be afraid to try. It is now too late for this operation as the scion should be cut before the buds swell in the spring, but budding in late summer may be substituted. It is truly remarkable how soon a grafted tree will form a new top and bear new fruit. If it has happened that the tree has been condemned for not bearing, it is almost certain that its barrenness has been occasioned by too rapid a growth in too rich a soil. If this appears to be the case, then there is a remedy in girdling the trunk. Along in May when the tree is growing rapidly, tear off strips of bark a foot or so long all around the tree, leaving only about a third of it undisturbed in alternate sections. This will usually check the growth and throw the tree into fruitage the next year. An eastern grower says that in Massachusetts a bearing peach tree is as precious as gold and is never cut down unless afflicted with the incurable yellows. Lastly, if the tree be menaced by the scale, it should be given a severe pruning and then sprayed with the lime sulphur wash. Above all, don't cut it down.

### THE NEW STRAWBERRY BED.

Tens of thousands of persons are now about to plant new berry beds. Success depends upon observing a few fundamental principles. The soil must be well prepared, and the plants well selected and fresh and lively. Then proper culture must be given for the next four months.

A soil that will grow good corn or potatoes is about right for berries. If you select land that has been heavily manured, and then cropped with corn for one year, you will make no mistake. But the soil must be finely pulverized to make the right conditions for the strawberry roots.

Plow eight inches deep and harrow five or six times, thus making the surface very level and very fine.

The majority of planters have a chosen method. A good general rule to be varied according to personal experience, method of culture, and variety, is eighteen inches in the row, and rows four feet apart. The rows in every farm garden should be long enough for convenient horse culture.

Then above all things set only good plants. You may have bought plants at high prices, and have the feeling that you cannot afford to lose them yet if you find them wilted, showing no sign

# Hay Forks That Help

There are Hay Forks that help, and Hay Forks that hinder you in your work. You don't forget the handy fork that helps—you single it out from the others every time you go for a fork.

To be sure of getting a real good Hay Fork, ask for the True Temper kind. They must prove true in quality, construction, "hang," and temper, under severe tests at the factories before they are permitted to receive the True Temper label. And they are manufactured from selected materials, by the oldest and largest manufacturers in the world. Therefore, you are sure to get the best Forks.

**Best Tools You Have Ever Bought** **TRUE TEMPER** **Same Price You Have Always Paid**

Not only Hay Forks, but all kinds of Forks, Hoes, Rakes, Weeders, Beet Tools, Hooks, Potato Fools—every desirable pattern of farm and garden hand-tools. Scientific and intensive methods of land culture are now pursued by intelligent farmers nearly everywhere. This calls for special-purpose tools which will help you to do your work with a saving of time and labor, and produce best results. In the production of crops their use means less expense and more profit for you.

Ask for True Temper when you want such tools. Our FREE BOOK, "Tools and Their Uses," will interest you. It is fully illustrated, and tells HOW to save time and labor, by using special-purpose tools. Write for it today.

Mailing expense 5 cts. which send or not as you please. A postal will bring them. Our Catalogue containing 64 colored plates of our Hardy "Blizzard Belt" Fruits, Evergreens, Ornamentals, etc., with a mine of valuable information for fruit growers, free for the asking. Write to-day.

THE GARDNER NURSERY COMPANY, Box 702, Osage, Iowa.

## We Breed 7 Varieties of SEED CORN

We raise every ear of corn sold by us for seed on our own farms. We cultivate 7 large farms; each of them produces a pure variety of seed corn. Our plan of cultivation insures your getting pure bred corn, the best varieties.

We have increased the yield of certain varieties from 35 to 90 bushels per acre on the same land. That shows what breeding will do. If you want some of that kind of seed corn send your name for catalog. We sell hundreds of bushels of seed corn to our neighbors annually; they tell us it is the best they can find anywhere. That's proof that our seed is what you want.

Box 16

W. W. VAN SANT & SONS

Farragut, Iowa.

## Pure Bred SEED CORN

Our business is growing seed corn. It means more bushels to the acre, when such seed is planted, and better corn; it means a bigger profit on your labor, and a corn that is ears—not nubbins. We grade it all by hand; test it; guarantee germination. We are located in best corn section of the world. Write for Catalog and free samples. Free Garden Seed Offer in Catalog. Photographs of real corn as raised.

Box 12

NISHNA VALLEY SEED CO.

**SEED CORN**

NEW GOLDEN WEST and all the best varieties of choice, selected, thoroughly tested seed corn, which have yielded 75 to 215 bushels per acre. Costs Only 25 cents Per Acre for Seed. Large, descriptive catalog of Seed Corn and all kinds of Farm and Garden Seed mailed free if you mention this paper.

IOWA SEED CO., DES MOINES, IOWA.

of vitality, the only thing is to throw them away.

It only adds to your expense and final disappointment to set out half dead plants. Better face the loss now and set only plants that show life.

Then the culture must be constant. Keep the soil loose and fine as a garden until August.

Let the planter be guided by those principles, and then be prepared to mulch his beds when November comes, and he will be reasonably sure of a crop the second year.

### GARDEN WINDBREAKS.

The garden plat for early vegetables needs a slight southern exposure and protection from north and west winds, a site selected just south of a grove, or buildings.

Where such protection can not be had, the farmer can grow in three years a sufficient willow hedge. In these days of high priced lumber it is perhaps a practical suggestion to say build a high board fence.

The windbreak once its advantages

are noticed, will not be readily abandoned. Its value in securing early maturity is considerable.

### MELONS.

If one has a sandy loam soil, and barnyard manure, and a willingness and ability to give proper care, he can grow melons.

Given an average season the profit will depend upon your market. The best location is within two to four miles of a city, or at least a town of three to five thousand.

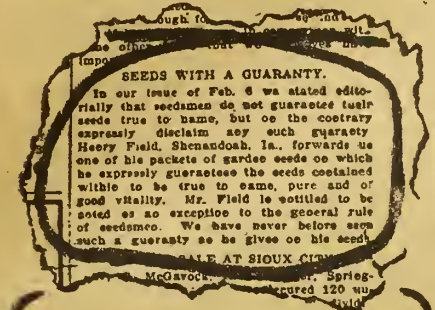

That is as far as you can profitably haul, and it is far enough to secure immunity from hoodlum raids.

It is always a mistake to buy cheap seed. The best is none too good; you must run the gauntlet of insects, diseases, and bad seasons, and it is not best to complicate matters with a cheap start. In melon culture as in every other farm venture whatever is worth doing is worth doing well. The time to plant is when you plant corn. In present day culture the crop is advanced two weeks by start-

# One SEEDSMAN Who GUARANTEES His Seed True to Name

Clipped from Breeders' Gazette Feb. 20th

This clipping in connection with the list of exposures of adulterated seeds, make mighty interesting reading.  
For 12 years I have carried a guaranty of purity, genuineness and germination on the seed I sell, and I propose it shall stand 50 years more. I have faith enough in my seeds that I am willing to back it up.  
This guaranty has helped me in building up the best seed business in the west. I sell all my seeds subject to a guaranty of Government Standard or better. I sell subject to your test and approval. I will ship on approval. I sell all kinds of seeds, seed corn, grass seed, garden seed, small grain, and all on the same terms. Write for catalog and free samples, or send along your order for shipment on approval.

**HENRY FIELD,**  
Seedsman  
Box 25, Shenandoah, Iowa.

## SEED CORN

I have an early yellow "Improved Corn," 10 days earlier than "Reid's" corn. I can give history of this corn for 70 years. I sell seed in the ear only and guarantee satisfaction or your money back.  
The Counties in which my corn was planted last year by the experiment station and the record was:

Improved Prize of the North. Scientifically bred, carefully selected. If corn is not satisfactory, it may be returned and money refunded. Shipped in ear or shelled as desired. **W. G. GRIFFITH, McNabb, Ill.**

## GOLD MEDAL SEED CORN

From stock that won the \$2,000 Burg wagon. 300 bushels Reid's Yellow Dent home grown and kiln dried, \$2.00 per bushel in ear, or \$1.75 shelled. Satisfaction guaranteed. Twenty years' experience. **W. P. COON, AMES, IOWA**

ing the plants in hot beds. Some think this too much work, but is it? Really is not success what you aim at? Getting in the market ten days or two weeks earlier than your competitors often makes the difference between success and failure.  
It must be borne in mind that the melon does not take kindly to transplanting. Some growers use paper berry boxes in which to plant the seeds, others use inverted sods. In this way the new era gardener, meets the problem, and solves it.

### BORDEAUX MIXTURE.

Bordeaux mixture is used more for spraying than any other single preparation. It is the only preparation commonly employed for the uses to which it may be put. Notwithstanding its great importance it can be used only for certain limited number of purposes. It is not a spraying panacea to be used for all manner of evils, but for those which it can remedy it is the best preparation that can be used.

The use of bordeaux is for destroying fungous diseases of plants. Among these may be named apple scab, brown rot, bitter rot, cherry leaf blight, shop hole fungus, plum rot, mildew, potato blight and others. Bordeaux will not destroy insects except, perhaps, some of the tender aphids or plant lice.

The preparation is as follows:  
Copper Sulphate, "Blue Vitriol".....4 lbs.  
Fresh Lime .....4 lbs.  
Water .....to make 50 gallons

Dissolve the copper sulphate in rain water in a wooden or earthen vessel. The best method is to suspend it in a gunny sack near the top of the liquid. As it dissolves the water becomes saturated and heavier, hence settles to the bottom and the unsaturated water rises to the top and dissolves more of the copper sulphate.

Slack the lime in sufficient water to insure against burning. When thoroughly slacked, strain to remove all lumps which might otherwise clog the sprayer. As soon as it is thoroughly cool it is ready for use.

Fill the sprayer about half full of water. Add the copper sulphate solution and stir thoroughly. Next add the lime and at the same time a considerable quantity of water, or better still, stir the lime into twenty gallons of water and then add slowly to the copper sulphate mixture, stirring vigorously the while. This insures a gradual mixing of the ingredients which is necessary for the making of a successful spraying preparation.

It is always best to test the bordeaux mixture in order to be sure that it contains sufficient lime to neutralize the copper sulphate, as a surplus of the latter is liable to burn the leaves. A very satisfactory test may be made as follows: After the lime has been added to the mixture and thoroughly stirred, dip out a small quantity in a saucer and add a few drops of saturated solution of potassium ferro-cyanide. If sufficient lime has been added, no change will be observed, but if there is not enough lime a brown precipitate will be formed. In this case more lime must be added. A solution of potassium ferro-cyanide will be prepared by any druggist. Ten cent's worth will make sufficient for an entire season's spraying.

The bordeaux mixture must be used as prepared, as it loses its value if allowed to stand any considerable length of time before being applied. Where there is a large amount of spraying to be done, stock solutions may be made of the lime and copper sulphate which may be kept for any length of time and used as needed.

We have found the following a very satisfactory method: Slack fifty pounds of lime, put into a barrel and then add sufficient water to make fifty gallons. In another barrel dissolve fifty pounds of copper sulphate in fifty gallons of water. To prepare a barrel of spray simply use four gallons from each barrel after stirring thoroughly.

In very extensive operations we have found it better to make a stock solution of copper sulphate double strength—that is, dissolve 100 pounds of copper sulphate in fifty gallons of water. Two gallons instead of four will then be necessary in preparing a barrel of spray.

The first spraying with bordeaux mixture should be made just before the blossoms come out, the second just after the blossoms have fallen, the third after an interval of ten days or two weeks, and the fourth about two weeks later. Lead arsenate, paris green or other arsenate or poison for the destruction of insects may be used in connection with

## Swift's Arsenate of Lead

This is the most efficient and lasting of all insecticides, and at the same time the safest. Swift's Arsenate of Lead sticks to the foliage after application and stays on, rains will not wash it off. This means a saving of time and solution in respraying, and uninterrupted protection of your plants or trees. There is absolutely no danger of burning or scorching the foliage no matter how strong a solution is used; solution is made with water only, or it may be combined with fungicides. Swift's Arsenate of Lead is the perfect insecticide for the Coddling Moth, Potato Bug Gypsy Moth, Tent Caterpillar and all other leaf-eating insects

Write for booklet and name of nearest dealer  
**MERRIMAC CHEMICAL CO., 41 Broad St., BOSTON, MASS.**

bordeaux mixture. The bordeaux should first be prepared and thoroughly agitated and then just before being used the insecticide may be added. This is the common method, as insecticides and fungicides are generally used together.

### The Clover Leaf Hereford Dispersion Shows Strong Tone to Cattle Market.

The dispersion of the Clover Leaf Herefords, owned by Mr. W. G. Swinney, of Bois D'Arc, Mo., at Kansas City, Mo., on April 5th, drew many representative breeders and the sale may be classed as good. The daughters of Beau Brummel were the best sellers and it was Daisette 15th, a daughter of this bull, that topped the female offering. She sold for \$320 to Mr. T. P. Whittenburg, of Pleasant Hill, Mo. Mr. Whittenburg was a persistent bidder on these better lots and took four head. The yearling bull, Recorder, a son of Dale Jr., topped the bull offering at \$350. He went to Mr. H. C. Schwant, of Wamego, Kan. It is to be regretted that such breeders as Mr. Swinney do not stay on indefinitely in the breeding business, as they are the kind who make the breed and inspire confidence in the business. Colonels Woods, Harriman, Sparks and Zaun were the auctioneers. The average on the entire sale was \$111.58. On cows, \$112.68, and on bulls, \$109.58. Following is a list of all sales of \$75 and over:

COWS.	
Rosetta, W. W. Wheeler, Harlan, Ia.	\$200

**WHY BUY A KNODIG SCALE?**  
Some good reasons for buying a Knodig Scale are the following: A 30-day free test is allowed; the freight is paid by the company; there is no digging to be done, which makes it possible to place the scale anywhere and move it around; there is no pit to dig and keep clean. When you have tried the Knodig for a month and proved to yourself that the above is true you will want to

**Northern Grown Reid's Yellow Dent Seed Corn**  
EVERY ear tested if you want. Your money back if it don't suit you. Carefully selected and crated.  
**A. M. AVERY & SONS, MASON CITY, IA.**  
Phone No. 3, Averydale line No. 2.

**300,000 RED CEDARS.**  
WE MAKE a specialty of growing Red Cedars from seed and we are the largest growers in the United States. Write us for price list.  
**GARLAND & FOWLER, AFTON, IOWA**

**The Jewell Nursery Co.**  
(Box 16,) Lake City, Minnesota  
Capital \$500,000.00. 1200 acres. Largest Nursery in Northwest. Established 1865. Hardy seeds, trees and plants. Agents wanted—Good pay.

**GINSENG** Small stock of plants, 3, 2 and 1 yrs. old. Seeds 18 months old for sale cheap. **L. H. Wright, Le Mars, Ia.**

**STRAWBERRY PLANTS** In best varieties. Special—300 sent for Dunlaps \$1. Fred I. Stum, Dexter, Iowa.

**SEED CORN** Funk Large Yellow Dent and Reid's Yellow Dent seed corn for sale by H. P. Wilkinson, Mitchellville, Iowa.

## FREE TO MEN

Sent Positively Without Cost.  
This is a bona fide offer to any man suffering from any of the diseases peculiar to men and is made by Dr. Rankin to give every man an opportunity to test, without cost, his superior and original methods. **One Week FREE Treatment**  
Dr. Rankin is without question one of the greatest specialists in diseases of men in the United States. His enormous practice, covering 30 years, places him beyond any experimenting. He cures where cures are possible.

If you need medical advice, why not get the best? This one week's treatment, absolutely free, will convince you.  
**Dr. W. D. Rankin,** Dept. 18, 136 W. 34th St., New York.

keep the scale. It is something necessary on every farm where stock is grown and sold. The construction of the Knodig is such that a long life is insured. It is made in different sizes and the price is very reasonable. If you are a thoughtful producer of grain and live stock you should have a Knodig. Write to H. C. Gumbel, Gen'l Mgr., National Pittless Scale Co., 2011 Wyandotte St., Kansas City, Mo.

**BLACKLEG NOT DANGEROUS.**  
Before the great French investigator Pasteur discovered a vaccine which when injected into the blood would make cattle immune from death by the dreaded disease, blackleg, thousands of cattle died annually. As is generally known this disease affects young stock, mostly calves and yearlings. It is almost speculation to grow stock on pastures where blackleg has caused deaths. The infection is by a germ which remains viable for years. Pasteur vaccine is quickly applied at a trifling cost. It may be obtained at any good drug store. If not, write to the Pasteur Vaccine Co., Ltd., 441-5 Wabash Ave., Chicago, and send name and address of local dealer. Mention this paper.

**DON'T BUY LAND.**  
Until you have received copies of the Home-seekers Guide and the Weekly Newspaper published in the interests of land seekers, in one of the very rich agricultural regions of Saskatchewan, Canada. This paper tells all about the properties which can be had by the homeseeker. With the information which these two papers will supply, a buyer of land should be well equipped to make profitable investments in this northern country. For descriptive material address the Nels Mikkelsen Land Company, Estevan, Saskatchewan, Canada. Mention The Homestead.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

BOARD BILL—EXEMPTION.

A Subscriber, Milton, Iowa.—We hoarded two school girls and have received but a small part of the board bill. I am informed that their parents live on a rented farm and are likely not very well off. I know that the law exempts certain property from the payment of debts. Would this provision of the law prevent me from collecting my board bill?

Answer.—The law provides that the head of a family may claim certain property as exempt from execution and attachment. A board bill is like any other ordinary debt. If the parents do not have more than the law allows them as exempt, you cannot collect your board bill by law.

PREPARING FOR LIGHTNING.

Mr. O. Redfearn, Bronson, Kau.—I live at the edge of a town of about 600 inhabitants, all of whom burn natural gas. I bought my property last spring. The big gas regulator stands in my door yard about thirty feet from my house. The main line stopped there then. There are small lines running all over the town. In case lightning should strike the big regulator building, burst the pipe, set my house on fire and burn it down with the contents, could I recover damages from the company if it was furnishing me with free gas at the time?

Answer.—It would all depend whether the damage or destruction of your house could be traced to negligence of the gas company. If that could be proved, you could recover damages, whether you were getting free gas or not.

ALIENIST—SELLING AT RETAIL.

A Subscriber, Panama, Iowa.—(1) What is an alienist? (2) Does a man render himself liable to penalties of a city ordinance by selling things which he manufactures out of material not produced by him, but purchased by him? (3) Suppose an ordinance of a city forbids retailing things without a license, and a broommaker should sell brooms by the dozen, half dozen and quarter dozen, would that be wholesaling or retailing, and would the broommaker be liable to the penalty provided in the ordinance?

Answer.—(1) An alienist is one who is engaged in the scientific study or treatment of mental diseases generally known as an insanity expert. (2) It depends upon the nature of the city ordinance. (3) Selling at wholesale means selling to retailers who sell the articles again to consumers—selling at retail means selling articles directly to the consumer, so there you are.

JURY FEES.

A Subscriber, Holt, Mo.—What is the law in Missouri in reference to the pay of grand and petit jurors? Please give book, volume and page where the law can be found.

Answer.—The law provides that each grand and petit juror on the regular panel shall receive \$2.00 per day, for every day he may actually serve as such, and five cents for every mile he may necessarily travel from his place of resi-

dence to the courthouse and returning to the same, to be paid out of the county treasury. The clerk of the court keeps the accounts of the jurors and issues scrip to them showing the amount each juror is to receive, and the scrip is paid by the county treasurer the same as county warrants. Petit jurors not included in the regular panel receive but \$1.00 per day. See Sections 3778, 3779, 3780, 3782, et. seq. pages 2100, 2101, Vol. 2, Missonri Ann. Statistics, 1906.

OFFICIAL MISCONDUCT.

A Taxpayer, Indianola, Iowa.—(1) Can the supervisors lawfully meet regularly once a month, aside from the regular meetings designated by law? (2) Is it lawful for supervisors and other county officers to attend political conventions, and charge their expenses to the county?

Answer.—(1) The law provides that the board of supervisors may hold special meetings, but a request for same must be made in writing by a majority of the supervisors to the county auditor, who then fixes a day and place for the meeting and notifies each supervisor and also publishes notice in papers. (2) It is not lawful. It is a graft, if not even worse than that. We think it amounts to embezzlement of public funds, and subjects the offender to criminal prosecution.

MORTGAGE—JUDGMENT—TAX SALE.

A Subscriber, Iowa City, Iowa.—(1) A bought a farm from B and gave him a note for part payment, secured by a mortgage on the farm. B transferred the note and mortgage to C. Later, D recovered a judgment against A. C has recently bought the farm at a tax sale. Can D compel C to accept payment for his tax title, and payment of the note and mortgage so that he can make the land liable for his judgment? (2) Can D prevent the court from giving C a title to the land on his tax title?

Answer.—(1) D can have an execution issued upon his judgment and have the same levied upon the land subject to the mortgage and tax sale, and if deed has not been made on the tax sale, the land can be redeemed from it, so that said execution will stand against it subject only to the mortgage and the land may be sold on the execution subject to the mortgage, and applied on the judgment. (2) The land can be redeemed from the tax sale at any time within about three years after such sale.

LAWFUL FENCE—ILLINOIS.

A Subscriber, Shelbina, Ill.—A owns eighty acres of land 160 rods long east and west, and eighty rods wide north and south. B owns the eighty acres joining A's land on the north. A's buildings are located near the center of his west forty. He wants to fence that forty with a woven wire pig tight fence. At present the partition fence between the two eighty acre tracts is divided so that A keeps up the east eighty rods of it, and B the west eighty rods of it. The fence at present will not turn hogs or pigs. How can A secure the building of a woven wire pig tight fence along the north side of his west forty acres between it and B's land without furnishing the material and building it himself?

Answer.—A cannot compel B to contribute to the building of a woven wire pig tight fence, but only to what the law of Illinois declares to be a lawful fence, which is as follows, "Fences four and a half feet high and in good repair, consisting of rails, timber, boards, stone, hedges, barbed wire, or whatever the fence viewers of the town or precinct

The Government Makes Butter

ALBERTA, Canada, is one of the best dairying countries in the world.

The Government has done everything possible to encourage the dairying industry, and the result is that hundreds of dairy farmers are getting rich at the business.

In order to stop abuses and insure a steady market and favorable market conditions for the dairy farmer the Alberta Government has established numerous creameries. These creameries are conducted on the most economical plan, and the cost of producing and marketing butter has been reduced far below the cost to private concerns.

The farmer takes his butter fat to the Government creamery and receives ten cents a pound down upon delivery. As soon as the fat has been turned into butter and sold he receives the balance due, after four cents a pound has been deducted by the Government to pay the cost of producing and marketing the butter.

Of course, if any farmer or any private company desires to make butter there are no restrictions, but the Government can do the work so much better and for so

much less cost that it pays no one to try to compete.

Dairying is only one of the lines that can be made profitable to the farmer.

Alberta is the best live stock country on the American continent. It is also a great cereal country, and all kinds of vegetables can be raised there.

The great irrigation project now under way near Calgary is destined to increase the production of the naturally rich soil many hundred per cent. Land under this great ditch will afford ideal farming conditions. If the farmer wants to raise live stock as well as crops of all kinds, grazing land can be secured in connection with irrigated land, and these combination farms will permit of diversified farming that is very profitable.

The man who is looking for a new location or an investment cannot do better than to visit Sunny Southern Alberta. Full information as to how to make the trip at very small cost, how to secure a good land as lies out of doors very cheap, and on the easiest of terms, will be sent upon application to

Canadian Pacific Irrigation Colonization Company, Limited,  
71 Ninth Avenue, West, CALGARY, ALTA., CANADA.  
Sales Department Canadian Pacific Railway, Irrigated Lands.

where the same shall lie, shall consider equivalent thereto, shall be deemed legal and sufficient fences,—provided that in counties under township organization, the electors at any annual town meeting, may determine what shall constitute a legal fence in the town; and in counties not under township organization, the power to regulate the height of fences shall be vested in the county board." See Section 2, Chapter 54, Rev. Stat. 1905.

HUSBAND AND WIFE—HOMESTEAD.

A Subscriber, West Point, Iowa.—A man died in this state, leaving a wife and children. He had a bond for a deed to forty acres of land on which they all lived. He was badly in debt when he died. Can the widow hold the land as a homestead against creditors, the same as though the husband held a deed for the land?

Answer.—If it was in fact used as their homestead in the lifetime of the husband, the widow can hold the interest the husband had in it, as a homestead exempt from the claims of all creditors, except the one to whom the purchase price of the land is payable.

RIGHT ACQUIRED BY CONDEMNATION.

A Subscriber, Lacona, Iowa.—Our school house being in a very out of the way place, the electors of the district decided to purchase a new site and move the school house to it. The old site was obtained by condemnation proceedings for \$5 and was not needed to the board or the district. The school superintendent says we will have to sell the old site and apply the proceeds on the new one. Can the old site be sold to the highest bidder or does it revert to the owner of the land from which it was taken?

Answer.—We think the right to the old site obtained by condemnation proceedings was simply the right to use the land as a schoolhouse site, and that when the district abandons it for such a purpose, it reverts to the owner of the land from which it was taken.

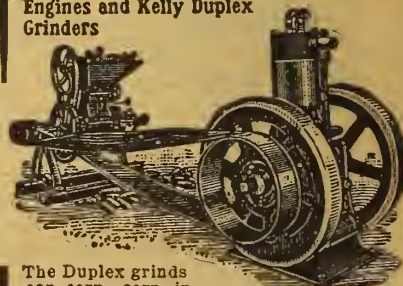

PARTITION OF LAND.

A Subscriber, Adams, N. Dak.—My father died last summer without making a will. He left seven children, two girls and five boys, all of age. I am the youngest, and was appointed administrator of the estate. All the children have agreed that I and one of my sisters shall have a quarter section of the land between us, each of us having one-half of it, and a written contract has been made and signed by all the children to that effect, in which all the other children agree to quit claim all their right, title and interest in said quarter section to me and my said sister, on demand. Is said contract sufficient, or will the county judge have to prepare a separate contract for each heir to sign?

Answer.—The whole matter can be properly done at the winding up of the estate by an order of distribution made by the county judge—or the children all

THE KELLY LINE

The Kelly Simplex Air and Water Cooled Engines and Kelly Duplex Grinders

The Duplex grinds ear corn, corn in the shuck, Kaffr corn and all kinds of small grain. Especially adapted for farmers and stock feeders' use. Write for free descriptive catalog, showing our full line of engines and seven different sizes of mills. The engines are shipped all set up and ready to run.

The O. S. KELLY WESTERN MFG. CO.  
DEPT. B, IOWA CITY, IOWA.

being of age, can execute quit claim deeds of all their interests to you and your sister. The contract you mention, if properly drawn, is sufficient and can be enforced at law. The matter will be actually settled when the quit claim deeds are made and delivered.

HOMES IN THE NORTHWEST.

Why not settle on the government land, or low-price farm lands that are improved, in South Dakota; thus staying near at hand instead of journeying to a distant region where the climatic conditions and social surroundings are widely different? Special low rates are in effect the first and third Tuesdays of each month to all South Dakota stations on the North-Western Line. It will pay you to investigate. New lines are opening up extensive territory to development, creating the chance of a lifetime. Ask your ticket agent to give you full particulars, with maps, pamphlets, and complete information regarding railroads rates and the steps necessary to secure government land free.

SETTLERS' RATES TO MINNESOTA, NORTH AND SOUTH DAKOTA AND CANADA.

On every Tuesday during March and April the Iowa Central will place on sale special second class settlers tickets at extremely low rates for benefit of settlers to the Northwest. Call on agents for rates, or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

My 2-in-1 Harrow Makes a Perfect Seed Bed in HALF THE TIME

BECAUSE It does the work of both a Spring Tooth and a Spike Tooth Harrow at one time and at one operation.

Because, you see, my harrow is BOTH HARROWS IN ONE. If you have to go over your field four times now—you'll only have to go over it twice with my harrow.

If your ground is in such shape that you now go over it twice, then only once over will give you an even better seed bed when you use my harrow, and you can follow right along with a planter.

That means if it rains overnight you haven't got your work to do over again.

On newly broken sod you can work across the furrows (instead of with them) and not pull up a single sod or choke the teeth. You can prepare new ground with my harrow in a THIRD the time you can working the old way—using two harrows separately.

One lover instantly adjusts my harrow so you can use the spring teeth alone—or the spike teeth alone—or both together—or you can throw all the teeth up out of the way so that the frame will slide along the ground like a stone boat.

When a live farmer knows about my harrow he wants it. I can name, off-hand, twenty places near my farm in Cass Co., Mich., where you'll find good spring tooth and spike tooth harrows out in the barnyard with grass growing up around them.

The farmers have thrown them away and are using my harrow alone—and they're MAKING MONEY by doing it.

HOW I CAME TO INVENT THE 2-IN-1 HARROW.

I always had the same trouble you've had in getting my ground ready.

It seemed like there ought to be some way around it. So my brother and I got busy one winter and SOLVED THE PROBLEM.

This is the way we figured:

A spring tooth harrow wants to keep digging in all the time. That keeps the frame pressed hard on the ground and it's a tough pull on the horses.

A spike tooth wants to keep jumping up all the time, you have to put some hoft on the top to keep it down. The horses have to drag the hoft as well as the harrow.

So we made a 2-in-1 harrow—spring and spike teeth together. That season we used it on our farm and it worked just as we figured it would.

The spikes kept the springs from digging in too far, and the dig of the springs kept the spikes down to their work—and once over (except on extra bad ground) left a smooth, even, perfect seed bed.

That's why my 2-in-1 Harrow was easier on the horses than either a spring tooth or spike tooth alone and SAVED OVER HALF OUR TIME getting ready for planting.

The best proof of how really good my harrow is lies in the actual fact that every harrow I have sold has since sold from two to five more.

My Harrow is such a really wonderful thing and such a TIME and MONEY saver for the farmer that I expect each harrow I place will keep on selling others in the neighborhood. So I have decided to make a

SPECIAL CONFIDENTIAL PRICE to the first man in a locality who writes me—the confidential price will be AWAY DOWN, too.

Don't even consider buying a Harrow till you get my confidential Introduction Price.

From Factory to Farm

# HOW TO FERTILIZE

Every farmer knows that plants need Food as much as cattle. He knows, too, that plants cannot get all the Food they need out of the ground alone. He must supply them with certain Food himself, or they will not thrive, and bear their full yield of fruit. Exactly as he supplies hay and oats to his horse so he must supply Nitrogen and phosphate to his plants. He may buy these in the open market exactly as he does his hay or his oats, or he can buy them in combination in the form of a "complete fertilizer." There is no secret value in the complete fertilizer; it is nothing more or less than the ingredients combined and sold at a higher price. Nitrogen is by far the most expensive as well as effective of plant foods, and it will pay the farmer well to stop and think before he buys it in this combination form.

## The Best, Cheapest, and Most Digestible Nitrogenous Food for Plants.

The cheapest and most practical form in which to furnish nitrogen to plants is Nitrate of Soda. In the rainless region of Chili are stored away vast quantities of Nitrogen in what are known as Nitrates—the only form in which Nitrogen can be utilized by a plant. The Nitrogen which exists in organic matter; that is, roots, stems, dead leaves, weeds, leather, dried blood, etc., and also Nitrogen in the form of Ammonia salts, must first be changed to Nitrate before it can be taken up by plants. This change is dependent upon conditions of weather. If season is backward or there be a prolonged drouth this change may be so retarded as to deprive the plant altogether of Nitrate Food at the very time it needs it most; moreover Nitrogen in the form of Ammonia salts leaves an acid residue in the soil. Nitrate of Soda, on the other hand, is entirely independent of weather and leaves alkali behind as a soil sweetener. It is immediately available under any circumstances, for it is readily soluble, and immediately it comes within reach of the roots of plants it begins to be taken up by them. It can, therefore, readily be seen that the practical value of various forms of Nitrogen ranges from nothing at all, where conditions of temperature of soil prevent Nitration, to 100 per cent in Nitrate of Soda where Nitration has already completely taken place. Moreover, the process of transforming the nitrogen of cotton seed meal, dried fish, dried blood, tankage, sulphate of ammonia, and other nitrogenous constituents of "complete fertilizers," into Nitrate is very wasteful, for much valuable Nitrogen is lost in the process, as well as by natural oxidation. Soil experiments have shown that 100 pounds of nitrogen in these forms have only about one-half to three-fourths the manurial value of 100 pounds of nitrogen in its Nitrated form of Nitrate of Soda.

### A Great Saving.

In view of these facts it seems extraordinary that farmers should continue to purchase their Nitrogen in compound form with phosphate, when they can procure it much cheaper, and ready for the plants' immediate use, in the form of Nitrate of Soda.

One ton of Nitrate of Soda has more valuable energizing food for plants than fifteen tons of the average cheap low grade complete fertilizers, on which you are paying freight on inert filler, and it contains more and better food than you will get in ten tons of the average so-called high grade "complete fertilizer." Why not buy the real thing and actually save big money in cost and in freight? One hundred pounds of Nitrate per acre is all you need as a starter. Why not

have the substance instead of the shadow? It costs from twenty-five to thirty cents a pound in so-called "complete fertilizers," and even then is often in a form which is not available as food for the plants, for it must first be converted into Nitrate. The time required to do this varies from a few days to a few years according to the temperature of the soil and the kind and condition of the material used in the "complete fertilizer."

It must be recognized that the farmer should have a chance to derive some profit from the use of a fertilizer, and wise buying is a prerequisite to successful use.

### How it Helps Crops.

If a young pig or a young calf does not have an abundance of the right kind of feed when it is young it becomes stunted in growth, and never recovers from it, no matter how judiciously it is afterwards fed. The intelligent cultivator has learned that this holds good in the feeding of plants. Nitrogen is the

benefited by Nitrate of Soda, which can be furnished all ready for digestion when the plants require it.

The highest agricultural authorities have established by careful experimentation that 100 pounds per acre Nitrate of Soda applied to crops has produced the INCREASED yields tabulated as follows:

Barley .....	400 lbs. of grain.
Oats .....	400 " "
Rye .....	300 " "
Wheat .....	300 " "
Potatoes .....	3,600 " Tubers
Hay, upwards of.....	1,000 " Barn cured
Cotton .....	500 " Seed cotton
Sugar Beets .....	4,000 " Tubers
Beets .....	4,900 " "
Sweet potatoes.....	3,900 " "
Cabbages .....	6,100 Pounds.
Carrots .....	7,800 Pounds.
Onions .....	1,800 Pounds.
Turnips .....	37 per cent.
Strawberries .....	200 quarts.
Asparagus .....	100 bunches.
Tomatoes .....	100 baskets.
Celery .....	30 per cent.
Hops .....	100 pounds.

Nitrate of Soda is a plant tonic, and an energizer; it is NOT a stimulant in any sense of the word.

**OLD-FASHIONED WHEAT CROPS**

Big stalks, well-developed heads and large kernels—the best, whether you sow for hay or wheat—will be assured if you use

## Nitrate of Soda

The two wheat fields illustrated above tell their own story. By tests carried on all over this country, it has been demonstrated that 100 lbs. of Nitrate of Soda to the acre has resulted in an average increase of 300 lbs. of wheat on each acre. It is the standard nitrogenous fertilizer, and the cheapest.

**TEST IT FOR YOURSELF ENTIRELY FREE**

Let us send sufficient Nitrate of Soda for you to try, asking only that you use according to our directions, and let us know the result. To the twenty-five farmers who get the best results, we offer, as a prize, Prof. Voorhees' most valuable book on fertilizers, their composition, and how to use for different crops. Handsomely bound, 327 pages. Apply at once for Nitrate of Soda, as this offer is necessarily limited. Books of useful information will be sent free to farmers, if paper is mentioned in which this advertisement is seen.

Send name and complete address on post card.

**WILLIAM S. MYERS, Director, John Street and 71 Nassau, NEW YORK**

element which enters most largely into the building up of the plant itself—root, stem and leaves. Most plants need to take up most of their Nitrogen during the early stages of their growth, as in oats. It is plain, therefore, that the cultivator cannot afford to overlook Nitrate, and thus endanger the chances of his crops which must have Nitrogen in a form the plants can use. The presence of Nitrate at the outset enables the plant to get its food when it needs it most, and develops a vigorous growth of roots, leaves and stems capable of withstanding the scorching rays of the sun or sudden changes of the temperature, disease or the attacks of parasites.

Nitrate of Soda is of high value for early crops, such as peas, corn, beets, and cabbage, where rapid maturity is desirable. It is a special help to hay, grain, rye, wheat, timothy, orchard or other cereals or grasses, all of which are unable to obtain sufficient Nitrogen from the soil just when they need it. It is a great specific in the production of sugar beets, potatoes, cotton and sugar cane.

Small fruits, such as blackberries, currants, raspberries and gooseberries, which need a steady, even growth are greatly

Nitrate of Soda may be used alone without other fertilizers, as a Top Dressing, at the rate of not more than 100 pounds to the acre.

### How to Learn About It.

The Nitrate mines in Chili are supervised by the government and authentic information is annually circulated about Nitrate of Soda among those who should profit by it. For this purpose the Nitrate of Soda Propaganda is maintained. Advertisements have been placed in the leading agricultural papers and offices established at John Street and 71 Nassau Street, New York, for giving out information in regard to actual tests made with Nitrate of Soda and as to its uses.

### Results on Hay.

For three years samples of Nitrate of Soda have been sent to farmers to experiment on Timothy. In each case two patches were marked out in the hay field, side by side—each about 20 feet square, about 1-100 of an acre. One re-

ceived Nitrate of Soda, equivalent to 100 pounds per acre, the other had none. The following are fair samples of the results reported, giving the weight of cured hay in each case:

HORACE FIELD, MATTAPOISETT, MASS.

Plot without Nitrate, 60 lbs. Plot with Nitrate, 90 lbs.

"Hay was well made. Nitrate plot ready to cut 10 days earlier than plot without Nitrate and the growth now is much heavier on the Nitrate plot."

WM. NORMAN, TOLEDO, O.

Plot without Nitrate, 36 lbs. With Nitrate, 62 lbs. "This is what I call dynamite soda."

E. P. NANCE, OAK LEVEL, KY.

Plot without Nitrate, 70 lbs. Plot with Nitrate, 104 lbs.

OLE O. HATLEDAL, BENSON, MINN.

Plot without Nitrate, 20 lbs. With Nitrate, 52 lbs.

"Plot with Nitrate now thick with grass again and will produce second crop of hay. Plot without Nitrate will not be worth cutting again."

DAVID H. EPPLEY, MUSKINGUM, O.

Plot without Nitrate, 42½ lbs.; with Nitrate, 78 lbs.

"Am much pleased and only wish I had used it on my whole field."

HERBERT J. FRANCE, BLAIRSVILLE, PENNA.

Plot without Nitrate, 63 lbs.; with Nitrate, 118 lbs.

"Hay was thoroughly cured when weighed. Plot with Nitrate kept six or eight inches ahead all summer."

H. E. HAPPEL, COCOLAMUS, PENNA.

Plot without Nitrate, 28 lbs.; with Nitrate, 53 lbs. "Am well pleased with the results."

ALONZO J. BRYAN, HUNTERDON, N. J.

Plot without Nitrate, 31 lbs.; with Nitrate, 63½ lbs. "The Nitrate made wonderful results."

CHAS. J. GROTH, SPRINGVILLE, N. Y.

Plot without Nitrate, 78 lbs.; with Nitrate, 147 lbs. "Cut Nitrate plot twice."

E. B. STRONG, CAUMING, NOVA SCOTIA.

Plot without Nitrate, 68 lbs.; plot with Nitrate, 91 lbs. "Much pleased with results."

LEONARD D. SPICKNALL, LA BELLE, MO.

Plot without Nitrate, 44 lbs.; with Nitrate, 69 lbs. "I consider Nitrate of Soda a most valuable producer, as hay seems softer and brighter from Nitrate plot than from the other."

WM. HENDERSON, ATHENS, PENNA.

Plot without Nitrate, 34 lbs.; with Nitrate, 60 lbs. "It was a fine test."

The average of these tests show an increase of 2,775 pounds of field cured hay per acre with the use of 100 pounds Nitrate of Soda. Bearing in mind the cost of Nitrate of Soda per 100 pounds, it is very evident that it pays to use it.

### The Purpose of the Nitrate Propaganda.

Free books, bulletins and all desired information are promptly forwarded to farmers interested. Thousands of farmers of the United States have seen Nitrate of Soda advertisements and thousands have written in answer to them for free books.

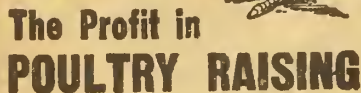

No nitrate is sold by the Nitrate Propaganda; it is maintained simply to put the facts clearly and accurately before the cultivators throughout the country and rapidly they are finding out that Nitrate of Soda is the cheapest and by far the most practical form of supplying their crops with Nitrogen. It is the only existing instantly available Nitrogenous Food for Plants.

### Free Information.

To a limited number of farmers who want to know, the Propaganda, in addition to bulletins from agricultural experiment stations, giving results of actual trials with Nitrate of Soda, is sending handsomely illustrated books, which any farmer may understand, and which should be in the library of every farm in the United States.

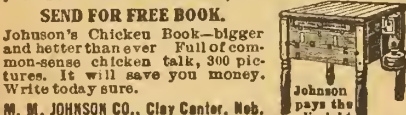

Farmers who may not care to make any of the experiments, who would like to know the results that others have obtained or who desire any information whatever concerning Nitrate of Soda, should write to William S. Myers, Director, John Street and 71 Nassau Street, New York.

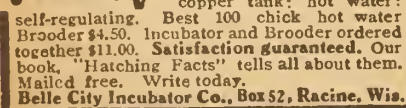

**DR. HESS**  
**Poultry PAN-A-GE-A**

**DR. HESS & CLARK**  
Ashland, Ohio  
**Instant Louse Killer Kills Lice**

Incubator and Poultry Catalog **FREE**. Booklet, "Proper Care and Feeding Small Chicks," 10c. 50c poultry paper one year, 10c.

water. Temperature always uniform. Warm water tank above chicks with loose flannel cover spring under flannel chicks borer. Warmth equally spread and chicks do not crowd. No under-heat to burn their feet. No steps or bridge to climb. No lamp fumes or burnt air to breathe. Should lamp go out the warm water would be all right. Lamp above chicks, has safety burner so chicks grow. Write for Catalog 106.

Next in importance is freedom from lice. Dust the poult and mother thoroughly with lice powders. If a turkey droops look for lice. Keep the lice off and you are sure of success. Until the poult is thoroughly feathered dampness should be avoided. If a sudden shower comes up get them into the barn. If you have one of the domestic breeds of turkeys it will not take long to find them and gather them in. Avoid letting the little fellows out in heavy dews in the morning. They will do better

stay in until the grass is pretty well dried out. Last of all keep the poults and coops thoroughly clean. Filth is another deadly enemy. Keep clean dishes, coops and everything surrounding the quarters in fresh condition. The turkey is a lover of cleanliness. Careful and painstaking attention to these four points, namely, food, lice, dampness and cleanliness, will give one the victory. After all, in turkey raising, like all other industries, the secret of success is in taking pains. P. M. Moore.

Commercial Poultry advises poultry raisers to arrange to grow a small garden for the fowls next summer. Plant a small plot in cabbages, beets, carrots and squashes for green stuff, and a larger one with sunflowers for the seeds and the shade they will make during the summer. To this advice should be added the advisability of raising Swiss Chard for the fowls. There is nothing grown that they like so well for greens. It is a foliage beet without the tuberous root, and is of the easiest culture. It is also fine for table "greens," much better than beet tops.

There is nothing in the old-time theory that allowing eggs to accumulate in the nest, or placing nest eggs in the nests, influences increased egg production. One writer puts it, "the hen seeing eggs in the nest is encouraged to increase the number." The bare fact remains that all records of phenomenal laying, and all of the established laying strains, have been made so through the means of a trap nest. As eggs are gathered from these nests as fast as laid, and the nest always empty, it is proof that the theory is not founded on fact.

Our American breeds combine hardiness and utility. This much cannot be said of many of the breeds sent us from other countries. Fanciers who have the ultimate good of poultry at heart, should use every effort to increase and maintain hardiness and utility qualities in all breeds in their care.

In order to build up a good trade for strictly fresh eggs, they should be not over three days old. One bad egg condemns the lot. It is claimed that more money is spent in this country for eggs than for flour.

#### POINTERS.

—Mr. M. F. Anderson, of Jewell, Iowa, is quoting prices on large Imperial Pekin duck

# Are You Feeding Lice

Don't try keeping hens and lice at the same time. If you do, the lice will have the benefit, the hens the annoyance, you the experience. Get rid of lice before experience costs too much. Dust hens, nests, platforms, every nook and cranny with

# Instant Louse Killer

One or two applications will rid the house and hens of every mite and body louse. Instant Louse Killer kills lice on poultry, horses, cattle, sheep ticks, bugs on cucumbers, squash and melon vines, cabbage worms, slugs on rose bushes, etc. It is also a perfect disinfectant and deodorizer. Sold on a written guarantee. Comes in shaker-top can for convenient use winter or summer. See that the word "instant" is on the can, as there are many imitators.

1 lb. 25 cents } Except in Canada and extreme West and South.

eggs in his advertisement that appears on this page.

—Rose Comb Brown Leghorn eggs are offered for sale by Smith Brown, Waterloo, Neb.

—Prompt attention will be given all orders for Black Langshan and S. L. Wyandotte eggs advertised by Mrs. Wm. Barr, Kirkman, Iowa. Prices on this page. Mention The Homestead.

—Anyone looking for big value in B. P. Rock eggs for hatching should write to Mr. C. G. Good, Ogden, Iowa. For prices see this page. Mention The Homestead.

—"They are pleasing everyone," writes Mrs. Frank Hart. See this page for her advertisement of Light Brahma and R. C. B. Leghorns. Kindly mention The Homestead.

—Eggs from two choice pens of Buff Wyandottes of the Brey and Beath strain are offered for sale by Mr. Clarence McClellan, Lowden, Iowa. Quotations are made on this page. Mention The Homestead in your inquiry.

—Eggs by the dozen or hundred are priced on Light Brahmans, Partridges or Silver Wyandottes. Also on Pekin ducks, Bronze turkeys and Toulouse geese by Mrs. O. B. McKeag, Montezuma, Iowa. See this page. Mention The Homestead.

—Mr. W. E. Shutt, St. Charles, Iowa, is quoting very attractive prices on eggs from his B. P. Rocks. His flock is in the pink of condition and he can supply eggs in any quantity. See this page for prices. Kindly mention The Homestead.

—After fifteen years of experience in raising Light Brahmans, Mrs. A. H. Klepper, Muscatine, Iowa, is fully prepared to supply our readers with choice eggs in any quantities. Her birds are large, fine type and heavy layers. See this page. Mention The Homestead.

—For eggs from well mated Barred Plymouth Rocks and Mammoth Bronze turkeys write Mr. W. F. Wheaton, Dresden, Missouri. Both flocks contain high-scoring birds and are in condition to do their best. Orders will be filled promptly. See this page for prices. Mention The Homestead when you order.

—One of the greatest if not the greatest problems in poultry raising is to meet with, is to keep rid of lice, mites and other vermin. Hens cannot lay and thrive nor can little chicks do well if infested with mites and lice. Cleanliness is a great help, but even with all care vermin will exist and multiply. The problem is easily solved by using Hawkeye lice killer. This preparation comes only in liquid form and is one of the most effective louse exterminators known. The claim is made that it is a powerful deodorizer and disinfectant. It is applied with a sprayer or a brush and once there, no louse or mite can exist or breed. One application will last for

asked of you is to send for a sample glass panel. The preparation is put up in one, two, three and five gallon cans, full instructions with each can. Write for circular giving full particulars. Remember the name and address,

The Hawkeye Chemical Co., Drawer H, Knoxville, Iowa. Mention this paper when you write and see page 14.

White Wyandotte eggs exclusively is what A. J. Podendorf, Logan, Iowa, is advertising in this week's issue.

Barred Plymouth Rock eggs of the Bradley and Noxall strains are offered for sale by the Messrs. Aye Bros., Blair, Neb., at \$1.00 per fifteen.

Mrs. H. C. Lambert, Anthon, Iowa, is offering exceptionally low prices for eggs from S. C. B. Leghorns on page 15. Write her and kindly mention The Homestead.

Some fine Black Langshan cockerels and eggs and B. P. Rock eggs are being offered for sale by Mrs. J. H. Parks, Agency City, Iowa, on page 15. Mention The Homestead.

Eggs from carefully selected and mated S. C. Buff Orpingtons are being offered by Mr. D. J. Hurley, Mt. Carroll, Ill. For prices see page 15 and mention The Homestead.

The advertisement of Mr. H. F. Allen, of Blairburg, Iowa, offering eggs from pure bred White Wyandotte and White Plymouth Rock chickens will be found on page 15 of The Homestead.

Mr. C. O. Garrett, of Adelphi, Iowa, is offering choice Buff Plymouth Rock cockerels for sale in his advertisement on page 15. Mr. Garrett breeds these fowls exclusively; he also has eggs for sale from his general flock.

Mrs. J. H. Norton, of Melrose, Iowa, announces in her advertisement which appears on page 15, that she is able to supply Homestead readers with choice Mammoth Bronze turkeys and Barred Plymouth Rock eggs at reasonable prices.

Very attractive prices for eggs from Rose Comb White Leghorns and Black Langshans are quoted on page 15. These eggs are very choice stock with which Mr. Joseph Cappel, Ashton, Ia., has had twelve years of experi-

ence. Write him if you need any eggs of this breed.

Barred Plymouth Rock eggs from prize-winning pens are offered for sale by Mrs. L. C. Reece, Prescott, Iowa.

The Dean Swift Poultry Co., of Des Moines, Iowa, are in the market to buy Mammoth Bronze and White Holland turkey eggs in large quantities. They wish readers of this paper having same for sale would write them stating how many they have and lowest prices. See advertisement on page 15.

Geo. Houge, Slater, Iowa, quotes prices on eggs of White Wyandottes of the Noxall strain. These birds are of the correct type, pure white and of great laying strains. For quality and utility Mr. Houge thinks they are hard to excel. See his advertisement and when you write for prices mention this paper.

We want all of our readers to send to the H. M. Jones Co., Graceland Farm, Berwick, Iowa, for their illustrated circular of Barred Plymouth Rocks. They are reliable breeders and guarantee satisfaction to every customer. Their prices are very reasonable and their stock the best. Write them today before you forget and receive their fine circular free. See advertisement on page 15.

Mrs. Mary D. Talbot, Mediapolis, Iowa, writes that she has on hand some very choice settings of Barred Plymouth Rock eggs from high scoring stock. Prices will be quoted on the hundred eggs if desired. The cockerels at the head of her flock were purchased direct from E. B. Thompson. Readers placing their orders here are guaranteed absolute satisfaction. See page 15 and mention The Homestead when you write.

Mr. Fred Williams, Barnes City, Iowa, wishes to advise our readers that he is selling eggs from the Single Comb Black Orpingtons at \$3.00 per sitting. From his choice flock of Single Comb Rhode Island Reds he is prepared to send out some first-class eggs. His flock of Bronze turkeys is doing well. Eggs from these can be secured

also. See advertisement on page 15, and mention this paper when you write.

Mr. D. W. Nickerson, of Marble Rock, Iowa, can furnish Homestead readers with Rose Comb Brown Leghorn eggs. His advertisement appears on page 15.

Insending in copy for new advertisement for Pheasant, Wild Duck, Geese, Brant, White and Barred Plymouth Rock hen eggs, the Deer Lake Park, Severy, Kan. state they are well prepared to fill orders in this line and guarantee satisfaction. If you are looking for eggs of wild game especially, you should by all means get in communication with these people. See their advertisement on page 15, and mention the Homestead when you write.

Mr. W. W. Forbes, Box 710, Jefferson, Ia., writes us that he has taken special care in selecting and mating his Rose Comb Rhode Island Reds and expects something choice as a result. He is offering eggs at special prices to our readers. His birds are of the correct type and color and an order from this poultry breeder should result in very favorable returns when hatching time comes. See page 15 for the advertisement and mention The Homestead when you write.

Mr. S. R. Young, of Spencer, Iowa, is offering Silver Laced Wyandotte eggs for sale in his advertisement on page 15. Mr. Young writes that at the Northern Poultry Show in 1906 he took first on hen, second on hen and second on pullet, third on cockerel, and in 1907 he took first, second and third on pullet and second on cockerel, and only had four birds on exhibition. He advises us that he finds The Homestead the best advertising medium he ever used.

C. W. Phillips, New Sharon, Iowa, sends us a circular and price list of eggs and breeding stock of Black Langshan poultry. He is now offering high grade eggs from matings which he considers unexcelled. These eggs are from birds which scored from 94 to 96½ and are brought up under very natural conditions. If you are interested in this breed,

you should by all means have this circular. Prices for eggs are quoted on page 15. Kindly mention The Homestead when you write.

Mrs. R. Van Der Wert, of Lacey, Iowa, announces in her advertisement that appears on this page of "The Homestead" that she has a few more fine, unscored Barred Plymouth Rock cockerels for sale. She also has Barred Plymouth Rock eggs for sale.

Mr. J. S. K. Campbell, of Morning Sun, Ia., a poultry breeder of sixteen years experience, writes us that of all the breeds which he has worked with, he thinks the White Plymouth Rocks are the most satisfactory for all round purposes. His present flock of this breed he thinks is just about right in regard to size, early maturity and laying qualities. His hens score from 91 to 95 and the cockerels 92½ to 94. The fowls in the flock are pure white with full breast and very fine yellow skin. Eggs are now being offered at reasonable prices and are guaranteed to be satisfactory. We would advise any of our readers who are looking for good eggs of this breed to write. Liberal treatment is assured as indicated by the advertisement on page 15. Kindly mention the Homestead when you write.

LIKE A MOTHER HEN.

On another page, under the above title, "Like a Mother Hen," will be found a poultry brooder. At present there are thousands of these in use, and their simplicity commends them to the use of those who need a sure brooder. This brooder is heated by warm water, which insures an even temperature at all times and in all parts of the brooder. This prevents the chicks from crowding. The water is heated by a lamp in a position where it is impossible for the kerosene fumes or burnt air to contaminate the place in which the chicks are kept. An added advantage is that the heat may be regulated and adjusted to the demands for warmth. Write for catalog 106, which explains all about this automatic brooder. Address Automatic Hatching Company, Detroit, Mich.

## POULTRY.

# BUY DOUBLE EAGLE NOW

## Just Think Of It ! ! ! !

15 CENTS Per Share

## IMPORTANT !

Do not invest with a Mining Company That Cannot Show Smelter Returns.

### Smelter Returns on Double Eagle Ore Show \$70 Per Ton

### Our Guarantee This is Important.

This Company will re-purchase from any stockholder any stock purchased by him (from the Fiscal Agent of this company) in the Double Eagle Gold Mining Co. after one year from date of purchase of said stock, and will pay said purchaser 10 per cent over and above the price paid by said purchaser for said stock.

This protects your investment. This guarantee is backed by over \$200,000 assets.

## Write for High Art Prospectus Today

Smelter returns are the only absolutely reliable and unquestionable proof of a mine's productiveness, reliability and stability. A mining company that cannot show smelter returns is still a prospect. You can purchase stock in a fully developed and equipped mining property at the low rate of 15c per share. Assays from \$44.20 to \$8,261 per ton and over \$5,000,000 worth of ore blocked out and lying on the ore dumps. The Famous Camp Bird, Liberty Bell, Tom Boy and Smuggler Union Mines are in the same district as The Double Eagle Mines. All have paid millions of dollars per year to their stockholders and none have stock for sale. The Double Eagle is as good, if not better, than any of the aforementioned properties.

San Miguel County, in which The Double Eagle is situated, produced over \$4,000,000 in precious metals in 1906.

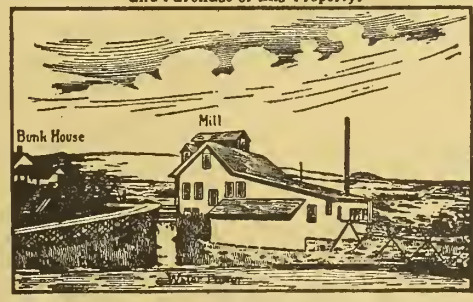

# GOLD! - SILVER! - IN GREAT ABUNDANCE

## The Famous Double Eagle Gold Mining Co.

THERE ARE A FEW GOOD MINING ENTERPRISES This is one. We invite your investigation.

Read this advertisement very carefully. IT MAY MEAN FORTUNE TO YOU.

Over \$200,000 Already Expended in Equipment, Development and Purchase of this Property.

This Company owns its property outright. Not a prospect, but a thoroughly developed and equipped mine.

This developed mining property is located in the heart of Colorado's richest district.

### ANNOUNCEMENT EXTRAORDINARY.

The Double Eagle Gold Mining Company, incorporated under the laws of Colorado for \$3,000,000 divided into 3,000,000 absolutely non-assessable shares.

### PROPERTY.

The property of the Company is located in Bridal Veil Basin, near the city of Telluride, and right in the very heart of the rich gold and silver bearing district of San Miguel County, Colorado.

It consists of twelve very rich claims and three mill-sites, and comprises about 130 acres. The Company owns this property in fee simple, and there is no incumbrance or indebtedness on same.

Immediately surrounding this company's property are the famous Smuggler Union, Liberty Bell, Tomboy, Nellie and Camp Bird mines.

These companies earned upwards of \$4,500,000 last year. The Double Eagle property is more advantageously situated, and its ore assays far greater values than any of the foregoing companies.

### PRESENT EQUIPMENT.

The company has erected on its property one fully equipped mill with a capacity of ten tons daily, a blacksmith shop, a machine shop, power house and dynamo room, a bunk house, assay office and laboratory and other minor buildings, all fully equipped. The machinery and buildings are all in splendid condition, and as good as when installed.

### WATER POWER.

Within 150 feet of the mill runs Bridal Veil Creek, and this stream has been utilized by this Company to provide about 80 horse power. A turbine has been installed which gives us sufficient power for all present needs. One hundred horse power more can be generated on our water rights. We have no expensive fuel costs.

### DEVELOPMENT.

The various claims of the Double Eagle Group have been opened up in eight different locations, and to date work has been done, as a result of which there is now upward of 3,000 feet of tunneling, drifts, cross-cuts, winzes and upraises. These cuttings, cross-cuts and drift upon eight true fissure veins from four and a half to twelve feet wide.

### VALUE OF ORE DEPOSITS.

Assays and smelter tests show that the average value of the Double Eagle ores are upwards of \$60.00 per ton. Assays show from \$44.00 to \$8,261.00 gold and silver values per ton. The Company has now over 150,000 tons of this high-grade ore blocked out, and also about 140,000 tons of low-grade ore, averaging about \$10.00 per ton, lying on the dumps, only waiting increased facilities to be turned into cash.

### THE COMPANY'S OFFER.

This Company now offers to the public its treasury stock at fifteen cents (15) per share. This is an unparalleled offer. Seldom, if ever, is the opportunity presented of purchasing stocks in a property of this character at this low price. The price of this stock will advance to twenty-five cents in a very short time.

### THE COMPANY'S PURPOSE

Is to increase the mill capacity to 200 tons a day; to install a 200-ton cyanide plant, to install aerial tramways; to equip the shafts with electric hoists; to increase the water power; to continue underground development, and to purchase other very rich claims on which the company now has option. It is to accomplish the foregoing that the Company is placing on the market 1,000,000 shares of its treasury stock.

### ESTIMATED EARNINGS.

This company confidently expects to pay dividends of at least 30 per cent annually. This means that at fifteen cents per share your investment will earn you 200 per cent, and each share you now pay fifteen cents for will then be worth \$2.00, i. e., \$37.50 will buy 250 shares. Thirty per cent dividends on 250 shares will net you \$75.00 per year; in addition to your stock will probably be worth \$500 on the market. Just think what \$1,000 will do, if invested in this stock.

### THE COMPANY'S OFFICERS:

Pres., J. H. HARRINGTON, of the Harrington-McCormick Commission Co., Kansas City, Mo.  
Vice-Pres., WM. PEET, President of Peet Bros. Soap Co., Kansas City, Mo.  
Sec'y. and Treas., C. C. COURTNEY, State Agent of the Mutual Benefit Life Insurance Co., Kansas City, Mo.

### DIRECTORS.

HARRY HALDEMAN, of the Sonora Chief Mining Company, Kansas City, Mo.  
J. T. GOODELL, Cudahy Packing Company, Kansas City, Mo.  
E. E. TOMLINSON, Traffic Manager, Swift & Co., Chicago, Ill.  
Z. F. CRIDER, Crider Bros. Com. Co., Kansas City, Mo.  
J. H. KETNER, Prop. Hotel Washington, Kansas City, Mo.  
J. LINDERMAN, Farmer and Real Estate, Kansas City, Mo.

### REFERENCES.

The foregoing gentlemen earnestly urge you to inquire of ANY BANK IN KANSAS CITY, MO., or any MERCANTILE AGENCY, as to their character and high standing. They are men of the very highest integrity and are trusted and respected business men of Kansas City.

F. C. VINCENT, Fiscal Agt., Suite 400-441 Gibraltar Bld., KANSAS CITY, MO

## THIS STOCK WILL ADVANCE TO 25 CENTS PER SHARE SHORTLY.

The Double Eagle Co. has already spent over \$200,000 in Development and Equipment of its 12 rich Claims.

If you PURCHASE DOUBLE EAGLE NOW you permanently increase your income. Bear in mind that this is a developed industry and not in any respect a prospect. It costs you nothing to inquire. Cut out the coupon, mail today.

## WITH THE EDITOR.

Easter is now a thing, rather a time, of the past, but it is only after Easter that certain remarks have timeliness.

More and more it would seem as if Easter were a double festival, or, to put it another way, a festival with a double significance.

To members of the Protestant Episcopal, the Roman Catholic and a few other churches Easter is the great religious festival of the year. The forty days of Lent, observed with more or less strictness, culminate in the services of Passion Week with its Easter climax greeted with the triumphant song, "Christ is risen—Alleluia!"

There is a mass of Christians to whom Easter Sunday is a time when in a church beautifully decked with palms and lilies they listen to a short sermon on the resurrection sandwiched in between anthems and solos specially prepared for the occasion. There is something a little peculiar in the attitude of some of these towards Easter. In a certain church a farcical little play, "The Union Depot," was given on Good Friday evening by the same persons who devoutly took part in the service at a sunrise prayer meeting on Easter morning. I confess to some curiosity regarding the mental processes of those who hilariously ignore the day which commemorates the crucifixion of Jesus and then devoutly celebrate that which commemorates his resurrection on the third day.

The church which, objecting to the observance of times and seasons, declines to observe Easter is at least logical, but what of those who make of Easter a great festival, but ignore Good Friday entirely? If Easter has any special significance to the Christian surely that special significance arises from the events of Good Friday.

The words "to the Christian" were used with deliberate intent. Many people who observe Easter do so without the least thought of its religious significance. To these, they are a vast multitude, it is a time for new clothes. This class is composed mostly of women; men do not indulge in Easter finery to any great extent, but for weeks before the festival women "shop" for gloves and laces and gowns and hats.

This custom of dressing for the Easter parade has become so general that the season has acquired commercial importance; merchants make the choicest offerings of the year for the Easter trade. This year the display of pretty things was so extraordinarily fine it filled the hearts of dress-loving women with delight or despair, according to the state of their pocketbooks.

Newspapers refer to the fact that high-priced goods were in great demand this Easter. They argue from this that the country is in a highly prosperous condition. It surely must be that some people have plenty of money when hats which sold best ranged in price from \$15 to \$85, when the demand for long silk gloves at from \$1.50 to \$2.50 was greater

than the supply, and when where merchants once sold an occasional suit at \$50, they sold dozens ranging from \$40 to \$150.

A few months ago Secretary Shaw, speaking in connection with the increased volume of trade in automobiles, alluded to the peril of America's rapidly increasing prosperity. A certain percentage of Americans, possibly an increasing percentage, purchase automobiles and costly clothing, but it is very doubtful if the mass of the people is in any danger of suffering from over prosperity.

## HOME AND HOMEMAKING.

## LITTLE HELPS BY THE WAY.

For this is my kingdom: My peace with my neighbor.

The clasp of a hand or the warmth of a smile,  
The sweetness of toil as the fruit of my labor—

The glad joy of living and working the while;

The birds and the flowers and the blue skies above me,

The green of the meadows, the gold of the grain;

A song in the evening, a dear heart to love me—

And just enough pleasure to balance the pain.

Tomorrow you have no business with. You steal if you touch tomorrow. It is God's. Every day has in it enough to keep any man occupied without concerning himself with the things beyond.—Henry Ward Beecher.

Today is ours; what do we fear?  
Today is ours; we have it here:  
Let's treat it kindly, that it may  
Wish, at least, with us to stay;  
Let's banish business, banish sorrow;  
To the gods belong tomorrow.  
—Abraham Cowley.

## THOUGHTS FOR PARENTS.

On the whole, in the ideal home children will be taught that they are partners in the firm; to be happy themselves and make things easy for the older ones. Parents will study the natural inclinations of the young folks, and pave the way to the consummation of their ambitions; they will blockade the way to wrong doing, and by precept and example open wide the gate to right living, so that while "the corn and oil" increases, the more enduring qualities of the home also will be preserved.

One of the greatest needs of the young people in the country is diversion; and because they do not get it is the real reason why many a young man and woman leaves the farm for the town.

## SMILES.

"Doctor, I want to thank you for your valuable medicine."

"It helped you, did it?" asked the doctor, very much pleased.

"It helped me wonderfully."

"How many bottles did you find it necessary to take?"

"Oh, I didn't take any of it. My uncle took one bottle, and I am his sole heir."

When Mrs. Lynch, the mother of an incorrigible pupil, called at a Long Island city school the other day, she apologized to the teacher for a pair of black eyes that her husband had given her. The teacher sought words to comfort the poor woman.

"It's too bad you have so many troubles," she said. "But it could be much worse."

"True for you, ma'am," said Mrs. Lynch. "It could be very much worse. Shure I might be after havin' no husband at all, like yourself, ma'am."

## HOW TO BREATHE PROPERLY.

The exercises available to produce better respiration are very numerous and varied, but the underlying principle is simply to bring into more vigorous play the muscles which expand the chest and at the same time excite deep and full breathing, to bring the vital force of the lung to its maximum. The commencement of such exercises is sometimes annoying to those of sensitive lungs, and in such cases they should be commenced with moderation, and increased gradually each time in number of inspirations. Several times a day the inflation of the chest by a series of gentle, deep, prolonged inspirations and forced expirations, when the practice does not provoke coughing, is very important. Whether walking on a level or climbing, the patient should breathe deeply and slowly. In ordinary breathing, the chief movement should be at the waist. The chest should expand at the belt and sides. The expansion of the upper part of the chest is necessary only in very full breathing.

To take a deep, full breath, expand first the chest, breathing in until the entire waist swells out, the sides expand, and the anterior wall expands; then breathe in a little more until the whole abdomen expands; now try to inhale still a little more by lifting up the chest and drawing in slightly the lower part of the abdominal wall. This gives a full and complete respiration. Paroxysms of coughing produced by full breathing and by distention of unused lung-tissue should not be regarded as a contra-indication.

Deep, full breathing exercises the muscles around the waist, strengthens them and gives one an added power of endurance. Breathing is really a kind of internal gymnastic exercise for the vital organs. The contents of the abdomen are moved and their energy increased; therefore, if one breathes only clavicularly, or upper-chest breathing, he does not exercise what is below the lungs, and it is now universally conceded that to enjoy perfect health the breathing must expand the entire trunk.

end and peel upward and the onion will scarcely affect the eyes at all.

Kerosene is splendid in cleaning silver. Dampen a cloth in the oil, dip in whiting and polish. The silver must then be thoroughly washed in soapsuds and polished with a flannel cloth.

Reduce the temperature of the oven when the cake begins rising in a heap in the middle. The oven is too hot, and the cake will be coarse grained if allowed to bake in this manner.

Save the strings which come around packages and keep them where they can easily be found when wanted.

In ironing handkerchiefs it is useful to remember that the middle should be ironed first; to iron the edge first causes the middle to swell out like a balloon, and makes it difficult to iron satisfactorily. Test the iron carefully before using it; a piece of rag should be at hand for this purpose.

Salmon Loaf—Take a can of salmon, drain off the juice and break fine with a fork, rejecting the skin and bones. Add the yolks of two or more eggs, beaten light, a cupful of fine bread crumbs, three tablespoonfuls of melted butter and a little finely-chopped parsley; lastly, add the whites of the eggs, beaten stiff. Put in a buttered pan and bake half an hour, basting occasionally with half a cupful of hot water, to which has been added a spoonful of butter, a little salt and pepper, and a few drops of lemon juice. Remove to a hot platter, garnish with parsley, and pour over it the following sauce: One cupful of rich milk added to the juice of the salmon, one tablespoonful each of butter and flour; cook until thickened. Fresh fish may be used instead of salmon, if preferred, and minced onion will please some palates better than parsley for flavoring.

Broiled Calves' Liver With Bacon—Have the liver sliced at the market, wash it well in salt water, then drain it dry. Brush it over on each side with melted butter. Lay it on the broiler and broil till done, first on one side, then on the other. Place on a hot platter and season with salt and pepper and butter. Broil the bacon one minute and place it around the liver; this is far better than frying.

## AMONG OURSELVES.

Just now every one—every housewife I mean—is either housecleaning, preparing to houseclean, or resting after housecleaning, but after a little all the houses will be spick and span and then the housewives will have a little leisure. No, I am not forgetting that after a little there will be garden and chickens, but I am remembering that under normal conditions the housemother owes it to herself, as well as her family, to so order things as that she can command a little time for rest and recreation. For this reason I ask an attentive hearing for "An Iowa Sister" who comes to talk about the club to which she belongs:

Four years ago we organized a ladies' club to be composed of twenty-five members, some of which reside in town and some in the country. Nearly all are married ladies, busy wives and mothers. The object of the club was the mutual improvement of its members. We have regular officers, an executive committee which prepares a year book containing a program for the year's work, time and place of meeting and names of all the members. One year we studied art and architecture of the different countries. Two years American history and literature, and some time was given to music and spelling. This year our study is a year of travel through seven countries of Europe. A novel feature of our club is the response to roll call. It is so varied, giving us a range of

subjects from topics of the times, current events, new inventions, select quotations, stories, favorite recipes, toasts and original poems, etc. A fine is required of members failing to respond according to program. Our guests' nights are hailed with delight by our husbands and other friends whom we may invite. They often occur at some special time, as our last on Valentine's evening. They are held at the home of one of our members. The decorating committee had made the parlors gay with bright draperies made of red and white paper hearts hung in the doorways and windows, pretty white paper doves swung in the midst and an occasional heart pierced by Cupid's arrow. A tray of paper hearts tied with white and yellow baby ribbon was passed, the gentlemen taking the yellow and the ladies the white. Small tables were placed and lively games of dominoes were played until the serving ladies, looking quite attractive in their white and red heart-shaped aprons, came with dainty drawn-linen covers for the tables. Again hearts cut asunder were passed, and partners for refreshments were found by securing the half heart which completed the verse each had. Everyone enjoyed the ice cream, angel food cake and coffee. The climax of the fun was not reached until the men were all in one parlor and bidden write a description of their wife's wedding dress, containing at least twenty words, and draw a picture of her as she appeared in it on their wedding day, those who were not married to write about the way they wished their future bride to look. Papers were collected, read, duly examined and everybody laughed. Then the ladies voted by ballot and two unmarried men won the prize—a pair of white socks. Then followed more laughing. Thus the hours were pleasantly passed and we bade good night to our host and hostess, the guests voicing the sentiment, long live the Ladies' Club.

There should be some such club in every rural neighborhood, and it is "up to" the enterprising women of the district to see that there is. By the way, the federation of the women's clubs of Kansas is to meet in Kansas City this year, the first week in May. I want to meet every woman Among Ourselves who comes to the convention. That I may not be disappointed will those who intend coming please be so good as to write me? We might perhaps have a little convention of our own in my den over the tea cups some afternoon. I should like it much. As an inducement I promise to have the Only Man on hand. Since I have had requests that the department be favored with the Only Man's photograph I expect the many who enjoyed "With the Editor" on the beauty of the heavens at night, a few weeks ago, will be interested in knowing that my other half wrote it—to help me out when I was behind with my work.

Olive comes to speak on the subject introduced by Mrs. Custer County:

I appeared in the Home Department eight years ago and received such a hearty welcome that I thought I would come often, but alas! However, I have scarcely missed reading a single number and have been much interested in the discussions and much helped by the timely suggestions, for which please accept my sincere thanks. What spurs me to the point of activity now is Mrs. Custer County's request for advice. But I must begin by telling her just what she says not to. Take your family to church and Sunday school. Don't try to send them, for it won't work. I believe if she manages things right she can go to church with them. She says

## Going to School or Learn a Trade?

If so, write for our fine new catalogue giving complete information about the special opportunities offered for obtaining an education in almost any subject and learning some of the best trades. Address: O. H. LONGWELL, Pres. Highland Park College, Des Moines, Ia.

she can't go herself, after doing all the work for a big family with lots of comers and goers. It doesn't seem to me that it is necessary for her to do all the work. What are children for, but to help? Don't neglect your children's training for "comers and goers." Devote yourself to the children while they are with you. It won't be long and when they are gone you will have time to entertain the comers and goers. I don't believe anyone has the right to work himself so hard that he is unable to go to the house of God once a week, anyway. I am speaking from experience, for we have four children, all boys, whose ages range from six to fifteen years. It would be an impossibility for me to do all the work alone, for I am not strong. The older boys turn the washtub machine and wringer and churn for me. The eleven-year-old washes dishes, cleans lamps, dusts, etc. Even the little one saves me many steps. In return I help them with their school work evenings. Thus we get on and no one is hurt and we all attend church and Sunday school and I find time and strength to do considerable church work.

Olive would like us to discuss the matter of Sunday entertaining for Christian people. This is a question on which considerable might be said on both sides. If the circle takes it up heartily we should hear some good things. I trust we may.

The thing I hoped for is coming to pass. Friends Among Ourselves are being impelled to write frankly, but kindly about certain duties and problems of parents. We shall hear Sister Eva Lehman, who is the eldest in a family of seven children and has brought up six:

As I sat down tonight after a day of strenuous work in the snow and storm, I

Most makers of lamp-chimneys don't mark their wares—possibly they are ashamed to.

If I didn't make as good chimneys as I do, I wouldn't mark mine either.

I mark mine "MACBETH"—my own name—because I am proud to be known by them.

My Index—it's free—tells other reasons why my lamp-chimneys are marked and why I am proud to put my name on them. May I send it to you?

Address, MACBETH, Pittsburgh.

turned to the Home Department and one of the first things that caught my eye was "What do daughters owe their mothers?" While once in a while in the past I have ventured into your columns the work of making a living for others has kept hand and heart busy and we often neglect to do what we need to think. But as I have read the daily papers the last few weeks my heart has cried out in horror for the terrible carelessness of mothers who will bring into this world lovely boys and girls and let them have their own way until they are past doing anything with, and then cry out in their great grief and sorrow. "What shall I do for my girls?" As the twig is bent the tree is inclined. Every mother should know where her girl is, what she is doing, what her company is and what places she is in the habit of going to, until she is old enough to know right from wrong. No young man will try more than once to hug a girl who has been taught to stand upon her dignity where young men are inclined to do things that they know are not what they would want their sisters to do. When I was a girl nothing made me so disgusted as to see the boys hugging the girls or kissing them good night, as a sleigh load would stop to leave some girl at her home. I had a cousin and a young uncle about my own age. One was a handsome fellow. The other was not so handsome, but both were very popular with the girls; so one day after a little more of the disgusting habit than usual I said, "Boys, what makes all of you boys so foolish? If I was one of those girls I would slap (that was the way I put it) boys that did such things, so they would never want to get anywhere near me again." This is the reply that I received, "What makes the girls let us?" I could not help saying then, what does make the girls lower their womanhood and let those who are not fathers and brothers make fun of them for it? A few weeks ago I was where I had to stay in a boarding house in a strange place. As I came into the hall I did not know which way to go and a gentleman pointing to my right, said, "There is the parlor and I think you will find the lady of the house in there." I stepped to the door to ask, but instead of the mistress of the house there sat a girl not over fifteen or sixteen years of age. A young man some older was stretched out upon a window seat with his head in her lap; she was playing with his hair. Another young man sat with his face where his back was supposed to be on a chair, getting as close as he could, as there was evidently not room on her lap for both heads. My first thought was, "My dear child, where is your mother?" Oh, mothers, we are not careful enough of our girls! Don't scold your girls, but go with them; know what they are doing. A few nights ago there was an entertainment in a little town. A load of young people from a neighboring town, every one of them minors, went over. They were about evenly divided boys and girls, and a driver. The driver persuaded a saloon keeper to mix the drinks for the boys. As a result driver and boys were all drunk. The team ran away and the wagon broke. Two of the girls had a brother living in the town, so went back there to stay all night. The rest of them had to walk home with some of the half-drunken fellows, some five miles. Some of the young men got lost and wandered around until daylight and found themselves miles from home. Does the fun one gets out of such a thing pay? These are but a sample of the things that mothers will let innocent young girls do, and then wonder why they must reap such terrible results. Let us as mothers teach our daughters to respect themselves; let us give them their good times at home where we can know what they are doing. It is natural for both to like the company of each other, and it should be so, but let it be in a jolly school fashion, not as beaux or lovers until they are old enough to know what that means. When mothers have done all that they can for either boys or girls and they have reached manhood and womanhood well trained, the love should be so great that the every thought of hurting that mother should be a restraint upon their actions and a guide to their actions.

It is our loss that circumstances have prevented our hearing from this friend oftener. Let us hope she may be able to come to us more frequently in the future than in the past.

The propriety of dancing has not appealed to the circle as was expected. I wonder if we are becoming less strict in regard to amusements—what do you think? From the few who wish to express themselves I have chosen Dakota Bachelor as spokesman this week:

I have been thinking perhaps a South Dakota bachelor's sentiments on dancing might be of interest. I presume some of the "sisters" will condemn dancing to their fullest capacity, but I hope someone will agree with me on the subject. Way down in Nebraska where I was raised, dancing was almost a thing of the past. There was a Dutch settlement several miles distant where they held a dance every once in a while sometimes twice. I remember slipping away from home on two different occasions and attending the Dutch dances. I had, what I thought, the biggest time of my life. I worked around by the month for a number of years, the last place I held down for four years. The folks I worked for, as well as the neighbors, did not believe in dancing, but the women organized a club and would assemble every two weeks to gossip and plan some big pow-wow. Last spring I wandered off up here to South Dakota and cabbaged onto a portion of mother earth. Up here there is lots of amusement in the line of dancing and kissing-bees. As I never was very forward and do not know anything about osculation, I have never attempted any of the latter. As a matter of fact, I do not believe in them. I have attended several dances, but did not try to shake the fundamental principles. I am afraid I would be worse than Abe Lincoln, who was a great, long, awkward fellow like myself. He attended a country dance where he met his future wife, whose name was Mary. After being at the dance a short time Honest Abe

**THE LAWS AND NATURE OF LIGHTNING**  
And How to Control It  
**DODD & STRUTHERS SAY THERE FIRST**

## Prof. West Dodd

HAS WRITTEN A BOOK

### ON THE ORIGIN OF LIGHTNING

This booklet will tell you why lightning damages a building and how it may be prevented.

It will tell you why stock is killed near wire fences that are not properly grounded, and how they may be grounded by anyone at a trifling cost.

If you will write to us, mentioning this paper, we will send this booklet FREE.

**DODD & STRUTHERS,**  
Des Moines, Iowa

### INVESTIGATE ADVANCE FENCE

It's different from all others—in construction. We don't cut the wires into short pieces in order to enable us to make fences a little faster. We have stuck to the good old way in which we made fence seventeen years ago and while it's not the fastest way it's absolutely the best way. Our stay wire is continuous—not cut at the top or bottom or anywhere else. That makes our fence twice as strong as cut stay fences.

Sold on approval. We offer to ship you all the fence etc. you need on approval. After examining it carefully and comparing it with others, if you don't want it return it at our expense and get your money back. Isn't that a fair offer? We prepay freight and guarantee safe delivery. Get our Fence Book and prices.

**ADVANCE FENCE CO., 34 OLD ST., PEORIA, ILL.**

spied Mary, and mustering up some of his reserve courage he approached her, saying he was pleased with her and would like to dance with her the very worst way. She consented, and they danced. When she returned to her companions one of them asked, "Did you, Mary?" "Yes," she replied, "we certainly danced the very worst way." As I am one of those fellows who mixes his own hash I can look back and see all of my mistakes. Had I been raised where dancing was fashionable and attended a dance occasionally, I perhaps would not be eating out of dishes that have not seen a dishpan for ages, nor wearing socks strong enough to stand alone.

A Dakota Bachelor is inclined to lay his wifeless condition to the fact that he cannot dance, but from his language, might one not infer that there are other reasons?

Next week we will have a reply to the question, "Should a girl give her mother her confidence with regard to her correspondents and her men friends?"

#### Dressmaking and Millinery, No. 564.

Sylvia Silverthorne, Muscatine, Iowa.  
[All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor to the editor of the Home Department.] The costume shown in the accompanying design is made up of two numbers, as you

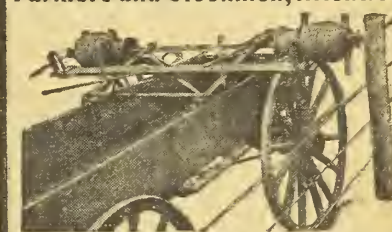

[5631 Pony Jacket. 5611 Seven Gored Pleated Skirt.]

will notice, and each of these numbers is a separate pattern. Do not order them without understanding this.

The pony jacket as a costume garment,

### Farmers and Stockmen, Attention!

No danger hauling barb wire if you use the Stark Combined Wire Reel and Stretcher (patented). It is just the thing for building new barb wire fences and for rolling up barb wire if you wish to remove any old fences. This machine is placed on a wagon box and fastened thereto with clamps by two bolts, without any injury to the box, and one man in the seat driving the team can roll up more barb wire without scratching his hands or tearing his clothes than twenty men could do by hand, and it is rolled up on spools in just as good shape as new wire coming from the factory, and can be used again for building new fences. For building new fences two spools can be placed on the machine and be unrolled at the same time as fast as the team can walk, and the wire is stretched by the same machine. For further information write to C. W. STARK, - MOUNTAIN LAKE, MINN.

### The Iowa gate - FOR THE FARM -

A small child can open or close it

BEING so simple they are very light and can easily be swung either way.  
The ROLLED STEEL TUBING FRAME makes them strong; not gas pipe or common steel.  
The IOWA gate is made to last—no castings to break—no wearing parts—even the wires have galvanized stretchers to tighten them.  
CHEAPER THAN WOOD. So write today for our low prices.  
**IOWA GATE CO., 9TH ST., CEDAR FALLS, IOWA**

as well as a separate one to be worn with a suit entirely different, is in exceedingly high favor and there are more of these seen than were a season ago when they came in as a novelty. The one illustrated in No. 5631 has many of the features of the Eton, being only slightly longer. Some minor points aid one in the choice of the special form of jacket. One of these is in the matter of becomingness to the individual who wishes to use the model. Another that must frequently influence the decision is as to its newness to the intending wearer. Those who have on hand or have recently had an Eton will choose the pony coat as a matter of variation. Or for similar reason the choice may be for the Eton. The lines of No. 5631 are especially becoming in the way of giving a slender effect, the seams extending from the

shoulder seams to the bottom at both back and front. The jacket consists of fronts and side-fronts, back and side-backs. There is also a vest effect in velvet overlaid with

[5613 Blouse or Shirt Waist, 32 to 44 bust.]

fancy applique. Wide braid and soutache that is in a fauzy pattern, bought ready to apply, is the trimming. This trimming is arranged over the seams and at the front edges, as well as on collar and cuffs. The

sleeves are in elbow length, this mode prevailing almost exclusively in the short models of whatever design. Pattern No. 5631 is cut in sizes for a 32, 34, 36, 38, 40 and 42 inch bust measure. Give bust measure when ordering pattern.

No. 5611 shows a seven-gored pleated skirt that is simple and very stylish, having the pleats so arranged that they give the panel effect. This feature is of especial advantage when a trimmed skirt is desired. The application of the braid in the manner illustrated affords one suggestion, and may be carried out in braid, ribbon, velvet or in bias hands, or a design in applique may be used, or a braided design may extend from the bottom of the skirt to any desired height. Pattern No. 5611 is cut in sizes for a 22, 24, 26, 28, 30 and 32 inch waist measure. In ordering the pattern say which of these sizes is wanted.

Shirt waist No. 5613 is made on very simple lines and is a very popular model, and a study of it will help you to note its opportunity for various developments. I have mentioned the great favor of the use of frills on pleats, cuffs and collars. These may be applied on the edges of the front pleat only, or turning outward on the edges of all the pleats the entire length of the waist. Embroidered edging may be used instead of the frills and in the same manner, but the frills are newer. Another fancy for such waists is to have the collar and cuffs of white and the other portions in a color, or in striped or plaid material. Linen in self color will have collar and cuffs in white. You will note that the waist may be finished with high neck to be worn with separate collar, shallow turnover collar or the flat turnover as in the large design. Hand embroidery done on such collars and cuffs is a very stylish finish. Pattern No. 5613 is cut in sizes for a 32, 34, 36, 38, 40, 42 and 44 inch bust measure. Give size when ordering pattern.

Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

Second Quarter. Lesson II. Genesis XXXII, 9-12, 22-30 April 14, 1907.

#### God Gives Jacob a New Name.

There was a clash of feeling in the heart of Jacob as he approached Canaan after his exile in Padan-aram. There was joy! Before him lay the land "promised" to him—a land flowing with milk and honey. And he was making his entrance in good form. He returned not as he went out, with merely a staff in his hand. He came as a mighty sheik, who could look complacently at his vast flocks and herds, and the caravan of his followers, with all the impedimenta of a great camp. Nor were his thoughts wholly upon temporalities. He had learned many religious lessons in his banishment. He came with the intention of discharging well the priestly function inhering in his headship of the nation. He had some conception, however incomplete, of One who was to be born of his line, a Prince and a Saviour. He had the Messianic hope. . . . But all the brightness of Jacob's joy was darkened by one cloud of angry portent. He must needs meet the consequences of the sins of forty years ago—his unbrotherly action; his ambition, greed, and fraud; his overhaste and use of foul means to accomplish what he had reason to believe was the Lord's will—all these assumed a spectral form to haunt him. His wronged brother was approaching in hostile mien and force. Esau was accustomed to nothing else but striking the blow of death. . . . To Jacob it seemed as if all was lost. What did it amount to—the sight of the Promised Land—if he must needs stain its border with his life's blood? And all the Messianic hopes and promises would perish in him. There is a touch of the domestic and affectionate spirit in the patriarch in his prayer. He fairly screens his eyes from sight of the impending slaughter of the innocents. He can not brook the thought of another

tragedy of a Niobe and her children.

In the extremity of his peril, the ruling passion, the strategic spirit of Jacob asserted itself. But the advance in character is manifest in that it took no ignoble form. There was nothing unworthy in the division of the caravan into two bands. The advantage of it was, that if one was taken, the other might be left. And the presents sent in a series would be cumulative in their effect to soften the anger of his injured brother. . . . Having done all that human tact could suggest, Jacob had recourse to prayer. Some one once asked a minister whether he believed in healing by faith or medicine. His very apt reply was: "I believe in healing by faith and medicine." Jacob used all the expedients he could think of to placate his brother and save himself and his family, just as if everything depended upon himself. Then he went to prayer, just as if everything depended upon God. . . . The prayer of Jacob is the first recorded prayer, as it is one of the noblest of all the Bible. "O God of my Father Abraham, and God of my father Isaac!" Here is an appeal to the God of the covenant. The entrance of a pathetic claim to the mercies of the covenant. "Which saidst unto me, Return." The present extreme peril is not incurred by any presumption or rashness on Jacob's part; but by his very obedience to the explicit command of God. "I am not worthy." This is deprecation. "Deliver me." This is supplication. "And thou saidst, I will surely do thee good." This is an appeal to, and a pressing of the promises of God. . . . Nature seems at that particular spot to be in strange harmony with the scene that transpired there. The brook Jabbok—the very name signifying "wrestler"—there hurls itself against the flinty barriers in its path, and forces a passage to the quiet pool beyond. So

# CONGO ROOFING

FREE SAMPLE  
WRITE TODAY

Settle that leaky roof once and for all! Cover the old shingles or the pin-holed tin with Congo and end the trouble!

It won't take as long or be as hard work as to patch the old roof.

You can lay Congo yourself. Unroll it on the roof and nail it down! Then forget you have a roof. There will be no more leaks to remind you of it.

We call Congo the "Never-leak Roof." We mean it.

Send for free sample and you will understand why we are so confident.

## BUCHANAN-FOSTER CO.

538 West End Trust Bldg., Philadelphia. - - Chicago and San Francisco.

the indomitable spirit of the patriarch there stormed the kingdom of heaven, and took it by force. Jacob was in an agony. Death was impending, his hopes ruined, his fortune scattered, his family slaughtered; he was in extremity. God's eye must pity, God's arm must bring deliverance. . . . There is nothing inexplicable in the wrestling scene, commonly thought to be so mysterious. It was a merciful concession when the Lord took upon Himself a human form, and allowed Jacob to vent his excessive grief and anxiety in the way of physical exertion. The corporeal struggle was an accompaniment to prayer. The prophet Hosea says Jacob wept and made supplication to the angel. Back of the wrestling, and in and through it, there was an intelligent mind, a fervent heart, and importunate spirit. Many persons of ardent temperament, or placed in desperate situations, will accompany their prayers with bodily exertion, in violent gesture, or loud tone of voice, or grip upon chair or bench or other article of furniture. . . . Yet Jacob was to be taught that the Lord's strength was made perfect in weakness—that it is not by (human) might nor power, but by God's Spirit; so the very seat and citadel of the physical might, his thigh, was miraculously "touched," and he bent like a broken straw. But even then he threw his arms about the angel's neck and hung upon him. . . . The angel might as well have asked Jacob what his former character had been as to ask his name; for name and character were synonymous. He was Jacob the supplanter, the trickster, the heel-holder, and tripper, gaining his ends by foul means if fair would not answer. The angel in that very question held up the mirror before Jacob, so that he saw plainly the ugly traits of his character. He despised himself. He was sorry for, and wanted to be rid of, his old self. He was ready to cry, who shall deliver me from the body of this death? He got a new name and nature simultaneously. . . . The angel's answer to Jacob's demand was equivalent to saying, "You know my name already; why do you ask for it?" Jacob showed that he knew the name when he called the place Peniel, "Face of God."

#### Analysis and Key.

1. Jacob's mixed feelings on return to Canaan. Contrasts of exit and entrance. Joy and fear.
2. The gains of the exile indicated in Jacob's conduct.
3. Facing the consequences of conduct. Approach of Esau, the avenger. Jacob's stratagem not ignoble as before.
4. Recourse to prayer. First recorded prayer of the Bible. One of the noblest—analysis of it.

#### The Teacher's Lantern.

The lesson of this thrilling scene is the same that Jesus sought to impress by the parables of the "Widow and the Unjust Judge," and the "Borrowing Neighbor." As the widow kept urging her suit, and the neighbor kept knocking, so Jacob kept crying: "I will not let Thee go except Thou bless me." There must be a moral earnestness, which discovers itself to itself and others, before God will bless. As one has said, the arrow which is to pierce the sky must part from the bent bow and strained arm.

Grace is gradual. The full stature is attained by daily accretions of faith, prayer, and service. But there are also

periods in which, by an uncommon concentration of thought and effort, phenomenal progress may be made. That is the meaning of Jacob's experience on the bank of the foaming Jabbok. Jacob had grown much in grace since he saw the ladder of Bethel forty years before. But in that one night of importunate prayer he made a surprising advance. He was knighted, lifted to the only true and imperishable royalty. He became a prince.

A candidate was created a knight by the king, who struck the person kneeling with the flat of a sword upon his back, exclaiming, "Rise, Sir —!" The blow which Jacob received was no light accolade. It crippled him. But as he passed over Peniel, halting on his thigh, the sun shone on a prince, an Israelite indeed, out of whom the guile had been taken.

Orthodox Jews to this day religiously abstain from eating the nerve that fastens the thigh-bone in its socket. That particular muscle is carefully extracted at the Hebrew abattoir. This is a traditional usage, serving to remind the eater of Jacob's wrestling-match. There is no law for it. It sprang from awe of the member in which the patriarch was wounded, and is a collateral evidence of the reality of the circumstance.

He prevailed not against him. The Almighty often fails yet in His wrestling with the stubborn wills of men. There is an ultimate element of self-hood in man that can and does successfully assert itself against God. There is a central citadel of our being which Omnipotence never storms, and, as we are constituted, can not successfully assault. The terms of Jesus' message are yet, "If any man will [is willing, consents, agrees to it] be My disciple, let him deny himself, and take up his cross and follow Me."

#### A PRACTICAL HARROW INVENTOR

is Mr. J. R. Naylor, living near Chicago. He has invented and spent a great deal of time in perfecting a new harrow which promises to become a great tool in the hands of the farmer who needs a good stirring harrow. The advantage which is claimed for this harrow is that it does the work of two implements. It can be used as a spring-tooth or as a spike-tooth harrow. The effect of both these tools may be secured at one operation. Mr. Naylor thinks that he can do as much work with this harrow in half the time that he can with an ordinary implement. In other words, instead of going over the ground four times, it will be necessary to cover it only twice. All parts of this harrow are made to wear and last well. It is easily adjusted to suit the needs of the surface of the soil. To introduce these harrows, a special price will be quoted to the first man in a locality. You should by all means investigate this offer. Write to the J. R. Naylor Manufacturing Company, 14 Spring Ave., La Grange, Ill. See page 12 for what he says about it.

#### BARGAINS IN FARM LANDS.

If you want to learn about exceptionally rare bargains in South Dakota farm lands or unusual business opportunities in the new towns in the magnificent new country being opened up by the Minneapolis & St. Louis R. R. extension write for beautifully illustrated descriptive pamphlet on the "New Empire," the farmer's and stockman's paradise. This pamphlet will be mailed free. A postal card will do it. Write at once before edition is exhausted, to A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

## VETERINARY MATTERS

**PROFESSIONAL** veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

## SYMPTOMS AND TREATMENT.

## INDIGESTION.

I have a colt coming three years old that does not thrive very well. It eats pretty good, but it does not seem to do it any good. It does not seem to have much life. I think it is indigestion. What would you do for it?

Feed black strap molasses as advised in another answer and in feed twice daily mix a tablespoonful of a mixture of equal parts finely granulated hypsulphite of soda, powdered wood charcoal, hydrastis canadensis and ground ginger root. Allow plenty of outdoor exercise daily.

## INDIGESTION.

I have a gray horse, eight years old, that is in poor condition. He has a poor appetite, especially when working. Gets tired and lays down quite often when in the barn. When out he will stand and eat dirt. I have given him no treatment as yet. What shall I do for him? (2) What is the best treatment for worms in young horses?

(1) Have the horse's teeth attended to by a veterinary dentist and if the coat is long and rough have him clipped at once. Provided the stable is kept clean and perfectly ventilated this may be all the treatment necessary, but if trouble continues after two weeks, commence mixing in feed twice daily a tablespoonful of a mixture of equal parts powdered wood charcoal, finely powdered hypsulphite of soda, ground gentian and hydrastis canadensis. (2) After

starving horse for eighteen hours, give one to two ounces of turpentine in half to one pint of raw linseed oil according to age and size; then mix in feed night and morning a teaspoonful of dried sulphate of iron and two each of common salt and ground gentian root. Lessen dose of iron and gentian for colts, and continue for all horses one week; then skip ten days and repeat.

## COUGH.

Kindly publish in your paper a remedy for cough among cattle. I have a cow that has a hacking cough for at least five weeks. I am at a loss to know what to do for her. She eats well, but acts doxy.

Have the cow tested with tuberculin, as it is to be feared that she has tuberculosis affecting the lungs and until this has been done you should not use her milk. Otherwise glyco-heroin in half to one ounce dose two or three times daily will usually cure the cough provided food is free from dust and stable kept clean and well ventilated.

## TUMOR.

I have a three-year-old cow which has a lump as large as my fist on the right side of her throat. It is growing fast and is coming up toward her head. She eats well and is in good flesh. Tell me through your columns what to do for it.

Remove hair and rub tumor every other day with iodine ointment. If it softens, open it freely for evacuation of pus; then inject tincture of iodine daily until healed. If this treatment does no good it will be well to have the tumor dissected out by a qualified veterinarian after cow calves. It is most probably due to actinomycosis (lump jaw).

## SICK EWES.

Will you kindly tell me what is the matter with my ewes. They are due to lamb the last of February and March. They seem to be paralyzed in their legs, get down and lay helpless from one to two days after the attack comes on and refuse to eat or drink, and soon death puts them out of their intense misery. Their grain rations have been oats and corn. For roughness they have access to stock field, oat straw stack, and blue grass pasture with running water, and they get salt regularly. I lost several three years ago with the same trouble.

This trouble is very common and fatal where pregnant ewes are fed corn stalks, straw and withered grass in field. Sheep should have mixed clover and timothy hay or alfalfa hay and, if possible, some succulent food, such as roots or well-made silage free from mold or too much acid. Sheep cannot be saved when down paralyzed. It is a trouble to be prevented by plenty of outdoor exercise and attention to the bowels.

## WORMS.

What is the matter with my hogs. I lost nine last fall and killed five more that were sick, then I turned the herd into a twenty-acre corn field with some calves and have not lost any since, until about two weeks ago, and I lost four more the same way. There are some more sick. They cough a good deal, and after they get so they want to eat, they look like they had the thumps. I opened one and examined him and I found some little worms about the size of a pin and two inches long on the lungs. The lungs were black. Is thumps catching? I have fed corn this winter, and last summer I fed oil meal and shorts, corn and soaked barley. I also examined some last fall and found some large white worms in them.

The disease is not thumps, but verminous bronchitis and pneumonia caused by presence of the thread-like worms (strongylus paradoxus) you found in the lungs, and where worms, also, are present in intestinal tract the effects will be doubly injurious. Give the turpentine treatment so often prescribed here and repeat once a week as long as pigs cough. It also will be necessary to clean up, disinfect and white-wash all houses used by hogs and to make sure that drinking water is pure. Commercial worm powders also are good for worms in hogs.

## WEAK STIFLE.

Please tell me what to do for my sorrel horse. He is five years old and is in good flesh. At times his right hind leg gets stiff. When made to back up in the stall right quick, he seems to be locked or stiff in the hock joint. He is not lame. When his leg gets limber can hear it pop. Have him in barn on dirt floor most of time. I have been treating his hock joint with a liniment. Don't seem to do any good. Have only had the horse six weeks. Any information will be gladly received.

You have been treating the wrong joint, as the trouble is located in the stifle joint at flank. The patella (kneecap) slips out of place and you hear it snap back now and then. When cap is off the hock is set as described. Blister the stifle joint with cerate of cantharides and repeat in three or four weeks. Keep horse tied up for a month or more.

## DAY BY DAY

Agricola

Contrary to the common belief, adulterated sugar is not, at the present time, an article of commerce. This is the verdict of the Connecticut experiment station.

But in regard to maple sugar and sirup, the reverse is generally true. And the queer thing is that pure cane sugar is now the chief adulteration.

Formerly glucose sirup or brown sugar sirup was flavored with oil of hickory bark or corn cob extract and sold for maple sirup. Now the manufacturers mix cane sugar with maple and sell the whole for maple. As refined maple and refined cane sugar are the same the direct detection of added cane sugar sirup is impossible.

But much can be done indirectly which is impossible directly. Maple sugar contains a nearly constant percentage of ash and malic acid, and cane sugar but a trace of either. The absence of these betrays the lack of maple. Adding basic lead acetate forms a copious precipitate with true maple sirup, but none with refined sugar sirup.

Of thirty-nine samples examined by the Connecticut chemists only three were pure maple sirups. The swindle is in asking an exorbitant price for cane sugar sirup flavored to imitate maple, none of the samples containing over fifty per cent maple, and some of them scarcely an appreciable amount. When Agricola wandered through the sugar camps as a boy there was no adulteration whatever, and the farmers sold their maple sugar and bought cane sugar for family use. Maple was on the table during the spring season. After that none was seen.

Agricola can remember when Chicago had nothing but water communication with the rest of the world. Now, notwithstanding her net work of railroads, she wants water connection with St. Louis. That there is determined opposition to this, claiming that it would lower the lake level, should not stand in the way.

We remember when farmers with loads of wheat would get mired down in Haymarket street in Chicago, and that it was as muddy and disagreeable a place in the rainy season as can be imagined. The first time Agricola was there pavements and sidewalks were unknown, and he rode from the boat landing to the hotel on the back of an Indian pony. The rest of the family were tall enough to wade through the mud.

Land adjoining the town—now a part of the city, was held at \$10 per acre, and that was more than it was worth for farming purposes, as it was too swampy for anything but a duck pond. The streets have since been raised eight

feet and sewers carry off surface water. There is plenty of flat, wet land near by yet. The reclaiming of the wonderful country west of the Mississippi river has all been accomplished since that time, and that has kept us pretty busy.

But a truce to looking backward. The latest news from across the big pond is that the original inventors of the milk separator have just sprung upon the dairy world a separator with a self-balancing bowl. This is a triumph in mechanics. It will right itself while running at 6,000 revolutions a minute, and if a piece of lead be dropped inside it will adjust itself so as to balance and run without a tremor the same as if there were no added weight on one side. This means a great deal for a trembling separator bowl is wasteful of butter fat, and unsafe to run.

Now who will contrive a self-balancing head for statesmen? When our statesmen get to wobbling it is a sight to shock the guardian angels of our country. And it is barely possible that a self-balancing head piece for some of our agricultural writers would be helpful. Few are level headed at all times, not even preachers and weather prophets.

Spring is coming; the weather is getting warmer by fits. Happy are we if we can keep our mental temperature normal during chilly rain storms.

Good friends are the sweetest and grandest blessings vouchsafed to mortal man, but most of us are so constituted that we need a few watchful enemies to keep us from becoming egotistic.

Gravel on muck roads and muck on sandy roads is a golden rule in country road making. The theory is good, and the roads constructed on this theory are fine.

Inventors of milking machines are continually arising to herald to the world that they have successful machines. It is rather a fallacy than a falsehood. Agricola speaks partly from personal experience.

Years ago the philosopher Steele said, that a healthy old fellow that is not a fool, is the happiest creature living. It is at that time of life only that men enjoy their faculties with pleasure and satisfaction. It evidently pays to grow wise with the added years.

One of the meanest swindles perpetrated upon Agricola was when the lumber dealer sold him a lot of so-called cedar fence posts. They were nothing but tamarack, and proved not much more lasting than willow.

## Supplementary Pasture for Steers.

To the Editor of The Homestead:

The following communication has been submitted by one of your subscribers, Mr. E. M. Gibson:

I am feeding two loads of yearling steers and expect to grass feed them, but do not have pasture enough. I thought of sowing

## NO MORE SORE NECKS OR SHOULDERS

By using the "WHIPPLE HUMANE HORSE COLLAR" your horses will pull the largest loads in absolute comfort.

The "WHIPPLE" HUMANE HORSE COLLAR is the breast collar principle applied to the shoulder—it is adjustable, one collar fits any ordinary horse.

This collar is different from any other collar ever made—it brings the strain on that portion of the horse's shoulders best fitted to stand it, and affords comfort and ease for the animal under every condition.

We have testimonials from dozens of farmers showing that they are discarding nearly new old-style collars to replace them with the "WHIPPLE" HUMANE COLLAR.

It can be attached to any ordinary harness.

It is cooler for the horse.

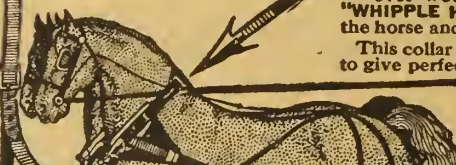

It saves money and trouble for it displaces the old-style collar, hame, short tug, sweat pad and saves veterinary and medicine bills.

Read what Mr. Davis says:—"Tekamah, Neb., July 4, 1906. I own a horse afflicted with a lump on shoulder which became sore whenever worked in a Hame Collar. I purchased a "WHIPPLE HUMANE COLLAR" in which I worked the horse and shoulder healed entirely. S. M. Davis."

This collar can be bought subject to trial, guaranteed to give perfect satisfaction.

Write at once for information.

HUMANE HORSE COLLAR CO.,  
1929 South 13th Street,  
OMAHA, NEB.

## LANDS AND HOMES FOR SALE.

## TAKE A TRIP TO SHREVEPORT

## HAD TERRIBLE ECZEMA

Caused Intense Suffering---Grew Worse Under Best Medical Treatment---Skin Now Smooth as Ever.

## USED CUTICURA REMEDIES

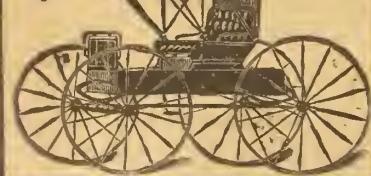

"Some time ago I suffered terribly with eczema, and I had the best medical attendance, but the more medicine I took the worse it seemed to get. I kept on with medicine for about five weeks until I saw the Cuticura Remedies advertised, and I at once purchased the Cuticura Soap, Cuticura Ointment, and Cuticura Resolvent, but had not the slightest hope of them curing me. After I had used the first set of the Cuticura Remedies I saw the improvement, and in just six weeks my skin was as smooth as ever. I advise any one suffering from this terrible disease to use the Cuticura Remedies. Henry J. Stelljes, 132 Spring St., Charleston, S. C., June 12, 1906."

The Hereford sale of Geo. J. Anstey, Masena, Iowa, was held at South Omaha, on April 4th, and everything was sold at a trifle less than one hundred dollars. The most of Mr. Anstey's cattle were young, and were good bargains to those who bought them. The females were all young heifers, otherwise would have sold much higher. He had a good bunch of strong lusty bulls, and that end of the sale was quite strong. These averaged \$102.10. The highest being Duke of Fairview, a yearling bull which went to M. J. Fitzgibbons, of Missouri Valley, Iowa, at \$235. Cols. Edmonson and Geo. P. Bellows cried the sale. Below is a list of those selling at \$100 and above:

Sankey 1st, one year, Berger and Duker, Calloway, Neb. ....	\$ 100
Virene, one year, W. J. Drennen, Mt. Ettna, Ia. ....	112.50
Willy 261438, one year, F. O. ....

# LANDS AND HOMES FOR SALE

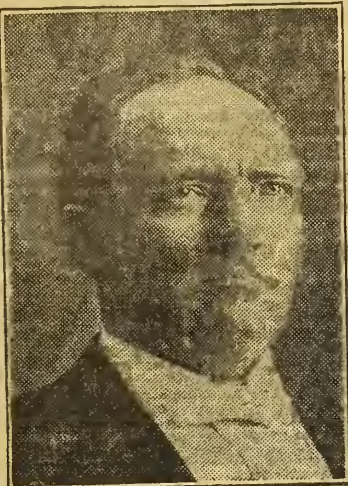

## Canadian Government FREE FARMS

OVER 200,000 American farmers who have settled in Canada during the past few years, testify to the fact that Canada is beyond question the greatest farming land in the world.

### Over Ninety Million Bushels of Wheat

from the harvest of 1906 means good money to the farmers of Western Canada, when the world has to be fed. Cattle Raising, Dairying and Mixed Farming are also profitable callings. Coal, wood and water in abundance; churches and schools convenient; markets easy of access; taxes low. For literature and information address the Superintendent of Immigration, Ottawa, Canada, or the authorized Canadian Government Agent, W. Y. Bennett, 901 N. Y. Life Bldg., Omaha, Neb. E. T. Holmes, 315 Jackson St., St. Paul, Minn.

Your sincerely  
G. R. Spielhagen

newspaper, machine shops, mills and cotton gin, ice factory, waterworks, local and long distance telephones, and an up-to-date 80-acre Demonstration Farm under the management of agricultural experts, where farmers can get free instruction and advice about the best and most profitable products raised in our country. We allow no one to fail in our country, as their success will be our success, as they are prosperous, we will prosper, as their land advances our holdings will advance, and we strive to the end that every newcomer becomes our friend and helps us to develop our country. We have never failed to impress the prospective purchaser when he came and saw our modern progressive towns and spoke to our satisfied farmers. We have churches of various denominations, the best schools, and a happy, prosperous and enterprising community. Land sold at Falfurrias not more than a year ago has doubled and trebled in value in the hands of the early purchaser, and while other companies operating in the Gulf Coast country of Texas have made \$25 per acre their minimum price we are still giving the opportunity to homeseekers of selecting their future homes out of a 70,000 acre tract of the most fertile open prairie land at \$15 per acre. Those not able to pay cash will be given reasonable terms. We will continue to promote railroads and build new towns, as the land sells to give the farmers proper shipping and market facilities, and have them enjoy the advantages of modern conveniences. Now, Mr. Farmer, stop and ponder—think the matter over—compare what you have learned in our previous advertisements with what you are now doing for yourself and loved ones—and if you come to the conclusion that you can better your condition by coming to this incomparable land, then take the first step that every cautious head of a family will take—come here and investigate for yourself, speak to our people that have come here before you and let them tell you their actual experience and judge for yourself whether in justice to yourself and family you can afford to remain where you are. Write me for our latest booklet, "Facts From Falfurrias Fertile Fields," and state your case to me and I will advise you in an honest way as to the road for your better welfare. We only want good people to become purchasers of Falfurrias lands—as we have to live with them. Poverty is no disgrace, but we'll take no excuse for rascality. Write today. It may lead to the bettering of your and your children's condition. Yours in sincerity, G. R. Spielhagen, Vice President and Manager, Falfurrias Immigration Co., 3 West 10th Street, Kansas City, Mo.

## Canada Wheat Land

is the best investment on the Continent to-day, and not liable to the manipulation of the stock markets. Buy of the company that builds and develops—judge us by what we have done.

## Last Mountain Valley Lands SASKATCHEWAN

Reports to the Government of the wheat crop for this district for 1906 show an average of 28½ bushels per acre. The wonderful development of the section has brought forth the competition of three railway systems. Furthermore, these are not the only points of excellence of this fertile land. After the day's work is done you may take advantage of a boat ride on the "shimmering waters of Last Mountain Lake."

Send 15c for Photographic Souvenir and 20th Century Atlas of Canada. Maps, descriptive matter, on request.

## Wm. Pearson Co. Ltd.

307 Northern Bank Building  
Winnipeg, Canada.

## LET ME SELL

### YOUR FARM, HOME OR BUSINESS.

No matter what it is worth or where located, if you want your property sold quickly send description and price. If you want to buy a property of any kind, tell us your requirements. We can save you money.

### GLENN REALTY CO.

18 Gumbel Building, KANSAS CITY, MO., or 911 Sykes Block, Minneapolis, Minn.

## LAND AND A HOME THAT PAYS FOR ITSELF!

AND a weekly newspaper published at Estevan, Sask., will be sent for a time (free of charge) for the asking. Each would bring to you much information of our locality. The Land of Estevan, the Land of Opportunity, the Land of Prosperity. Address,

THE NELS MIKKELSON LAND CO., Estevan, Sask., Canada. Mention the Homestead.

MINNESOTA LANDS ARE THE BEST We own the lands we offer, have always believed that MINNESOTA is the best State in the Union for the farmer and are now selling lands to those who went to Western Canada and the dry belt in the past four years. Our lands are in Central Eastern Minnesota, between the four great markets, St. Paul, Minneapolis and Duluth and Superior. DON'T be misled by cheap rates and boom literature but settle where you can be sure of making a success. SEND FOR MAP AND BOOK. Farmers Land & Cattle Co., Globe Building, St. Paul, Minnesota.

## THE BEST DEAL YET

offered the actual HOMESEAKER is that of The Duluth & Iron Range R. R. Co., in its Meadowslands district of St. Louis County, Minn. Good land at reasonable prices and on 15 years' time. Write for full information to Land Commissioner D. & I. R. R., 625 Wolcott Bldg., Duluth, Minn.

FOR SALE OR EXCHANGE: 300 acres Mer county Missouri, improved, good land. 248 acres Henry county, Missouri, good new improvements, productive soil. Write for description and price. Box 152 Independence, Iowa.

## ADVERTISING NOTES.

Ginseng plants are offered for sale by L. H. Wright, Le Mars, Iowa.

Strawberry plants are offered for sale by Fred I. Slocum, Dexter, Iowa.

Three hundred thousand Red Cedars are advertised for sale by Garland & Fowler, Afton, Iowa. They are the largest growers of Red Cedars in the world and can fill any kind of an order.

Northern grown seed corn is advertised for sale by the Gateway Nursery Co., Le Mars, Ia. They also sell all kinds of nursery stock, such as fruit and ornamental trees, shrubs and flowers of all kinds.

G. Gregory, Ralston, Iowa, is advertising an early "Improved Corn" which he claims is ten days earlier than Reid's. He sells it in the ear only. Write him at once, if you want it and mention Iowa Homestead when doing so.

Record number 114008: Fistula of three years' standing; bone badly diseased; surgical treatment failed and killing the horse was recommended. Owner cured the case completely by using one bottle of Fleming's Fistula and Poll Evil Cure. Fleming's Vest-Pocket Veterinary Adviser free by writing to Fleming Bros., 210 Union Stock Yards, Chicago, Ill. See advertisement on page 21.

The greatest bargain ever offered in Wyoming land is made by the O'Keefe Real Estate Co., Omaha, Neb. They have several thousand acres lying along the main line of the U. P. R. R. which they are selling at \$5.00 per acre. Land around them is being settled up by a German colony, and this is one of the best investments we know of. Write the above firm for further particulars at once and please mention Iowa Homestead.

Names of wool producers are wanted by Herman Reel, 125 West Water St., Milwaukee, Wisconsin. This firm buy wool and are prepared to quote sellers top prices on the market. Mr. Reel wishes to put in the hands of every flock owner, information regarding the manner in which the price of wool is controlled. He will be glad to hear from you if you have wool to sell whether it be in small amount or large. Write to the above address or see page 25. Kindly mention this paper.

Shearing sheep by machine is the modern way of removing the wool. Owners who continue with the hand shear are losing some good wool that might just as well be turned to profit. The machines get a pound or more wool per sheep over and above the hand shear. Stewart Shearing machines have a reputation for excellence and the one at \$9.75 advertised in this issue by the Chicago Flexible Shaft Co., 234 Ontario St., Chicago could profitably find a place on every farm where there are sheep.

The attention of bee keepers is called to the advertisement on page 4 of this issue of the Leahy Mfg. Co., who carry a full line of apiary supplies such as are necessary and practical to successful management of bees. This company has won an enviable reputation for the quality of goods manufactured, promptness in shipment, and number of satisfied customers. We suggest that our readers write to the Leahy Mfg. Co., 1738 South Thirteenth St., Omaha, Neb., for their new catalog and information of value.

Forty rods in one pull is a pretty good test for a wire stretcher. This is the record of the Automatic Steel Lever Wire Stretcher made by Otto C. A. Schwen, Davenport, Iowa. This stretcher is very simple in its construction which makes it a tool that will last a lifetime. Its lever arrangement makes it possible to always draw the wire past the center of the last post when it can be easily stapled. This is not possible with all stretchers. A nice little circular describes this speedy and powerful stretcher. It is a daisy splicer as well. Write the above address for further particulars and kindly mention The Homestead.

Did you ever hunt bugs with a Hurst potato sprayer? Compared to going after them with a pail and paddle it is rare sport. With this sprayer the work can be done often and rapidly. It takes four rows at a time or twenty acres a day. Not only potatoes, but truck and small fruit can be treated. The extra yield it can safely be said caused by the destruction of insects and bugs which injure farm and garden produce will increase the yield a good many per cent. Enough to pay for a sprayer over and over. A boy can operate the Hurst Sprayer, so if you have one set him to work. If you have to do the work yourself you can depend on it that it will be but a light task. Write to H. L. Hurst Mfg. Co., 86 North St., Canton, Ohio, for their free trial offer. Mention this paper. See page 11.

## A VALUABLE REMINDER.

Eastview, Mo., Sept. 2, 1904.  
The Lawrence-Williams Co., Cleveland, O.:

Today I happened to find some circulars in my office from you, and they called to my mind the use of one bottle of Gombault's Caustic Balsam on a horse that had ringbone. It was a bad case, but that one bottle cured him. I would like to get the agency for it. M. E. Bird. See advertisement on page 25.

## OBJECTIONS TO HOG WATERERS.

are usually because many of them have leaky valves, which cause no end of trouble in the yards. Those who have need of waterers will be glad to know that the Hawkeye Automatic Waterer has a valve which has proven by actual use on thousands of corn-belt farms to be well nigh perfect. The base of the valve is made of rubber and the ball which fits the mouth of this valve is made of metal that will not rust. Metal will not stick to rubber. That is the secret of

the success of the Hawkeye Automatic. The tank holds five gallons and may be set any distance from the supply tank. Two lots of hogs may thus drink from one waterer. The construction is durable and made to last. Send for booklet; it tells all. Mention The Homestead when you write. Address Parsons Hawkeye Mfg. Co., Newton, Iowa.

## STOCKMEN AS MINERS.

Drovers' Telegram, March 11, 1907.—A company of Kansas City live stock and business men have become interested in a valuable mining property in Bridal Veil basin near the city of Telluride and right in the heart of the rich gold and silver mining district of San Miguel county, Colorado. It consists of twelve claims and three mill sites. It is composed of 130 acres. The company already owns the property in fee simple with no incumbrance or indebtedness of any kind. Immediate surrounding are the famous Smuggler Union, Liberty Bell, Tomboy, Nellie and Camp Bird mines. These mines earned upward of \$4,500,000 last year. Mr. F. C. Vincent, the fiscal agent of the company, which is called the Double Eagle Gold Mining Co., says that property is more advantageously situated than the other companies and its ores assay far greater values than any of them. The property is already developed to handle ten tons of ore daily, but it is desired to increase the milling capacity to 200 tons per day. To do this a stock company has been organized and a million shares of its treasury stock is placed on the market. Also the Double Eagle Company have options on adjacent claims which are known to be very rich, which they wish to take up and consolidate with their company. For that reason they have decided to sell a small part of their stock. The com-

MAJOR F. C. VINCENT,  
Fiscal Agent of the Double Eagle Company  
and Successful Financier of Many Large  
Enterprises.

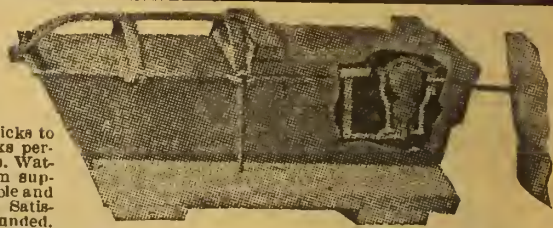

pany is owned by Kansas City men who are well known and who are at the heads of large establishments in this city. J. H. Harrington, of the Harrington-McCormick Commission Company, is president, and Mr. William Peet, president of the big Peet Brothers Soap Company of this city, is vice president. It is very seldom that a company has at its head such well known men as has the Double Eagle Gold Mining Company. Any

one wishing to know about the company is requested to write any bank in Kansas City, or the First National Bank of Telluride, Col. The company guarantees that any person purchasing treasury stock in the Double Eagle Mining Company from the fiscal agent, and who desire to sell the same at any time after one year from date of purchase of stock that the Double Eagle Mining Company will repurchase same from the purchaser and pay the purchaser ten per cent over and above the price paid by the purchaser of the stock. This guarantee is something unusual; all the men connected with the company are wealthy, there is no doubt but what the guarantee will be carried out to the letter. It is the policy of this paper not to accept advertising that is not of thoroughly reliable character. All objectionable advertisements are refused. Before accepting the advertisement of this company, which appears on page 17, the statements and claims were investigated and found correct in every particular. Therefore this paper is willing to give it's indorsement to the Double Eagle Mining Company's proposition and recommend it as a particularly worthy mining investment.

## NITRATE DEPOSITS.

There is a generally prevalent idea that it is an admitted fact that the Chilian Nitrate deposits will, at the present rate of working, be exhausted in the near future, probably within about twenty years. This estimate is based upon surveys and calculations made some ten or fifteen years ago, before a complete examination of the pampas outside the province of Tarapaca had been undertaken. In recent years vast deposits

have been discovered and surveyed in the districts of Antofagasta, Taltal and Tocopilla, and according to the latest official estimates the store of "caliche" now known to exist and to be workable will suffice to meet all requirements of consumption during the present century.—British Agricultural Press.

## EXTRA WOOL COUNTS.

The extra wool that is saved by a good shearer is the most valuable part of the fleece. It comes from next the skin and brings up the grade of the whole fleece. A shearer saves the sheep, as well as time. No cutting or hacking of the skin is possible. No scars result which make an uneven start for the next season's growth—a feature worth thought. It is generally considered that a sheared fleece will weigh from one-half to two pounds more per fleece than one sheared with shears. This means enough more wool from a sheep to pay for a machine in a short time. One of the great inventions of the past few years is the Stewart machine for shearing sheep. At every show or fair of national fame this machine has won first prize. At the St. Louis Exposition the writer saw one of these machines in the hands of an expert, shear three sheep in six minutes and forty seconds—a truly wonderful feat. Even in the hands of an amateur great results can be obtained. The saving of labor and fleece are each well worth thinking about. In some neat booklets the sheep shearing machine and the horse clipper are fully illustrated and described. Write for this information to the Chicago Flexible Shaft Company, Chicago, Ill. Mention The Homestead, and see page 8.

The above is a good likeness of Iams' Prusant de Lûroux (29344), a black Belgian, four years old, weight 2,310 pound's. This horse is a sweepstakes winner, one of the good stallions owned by Frank Iams, of St. Paul, Neb. [See page 27.]

A MACHINE FOR COTTON GROWERS

According to a despatch from Washington, an important problem has been solved by the department of agriculture for cotton growers. It is a machine for the removal of fuzz on cotton seed and for the separation of light from heavy seed. The process has been in course of development for about two years, and it is the opinion of cotton experts of the department that its universal use would effect a saving of about 10 per cent of the entire cotton crop. As the crop of America amounts to about \$750,000,000 a year, it can easily be realized that such a saving would be of vast importance. By the removal of the fuzz from the cotton seed the seed may be planted with an ordinary gravity drill. Owing to the ease with which the smooth seed can be manipulated they can be planted in hills, without unnecessary waste, and the plants so located can be tilled in two directions. The machine, it is stated, can be made at very small expense, and, as the invention is in the hands of the Government, cotton planters who use it will have to pay no royalty for it.

HAY MARKET.

Freeman Bros. & Co., send out the following, dated April 3, 1907:

Timothy.—Market steady and active for all good grades under moderate receipts and offerings. We would caution shippers not to press or load any hay which is wet or damp as it will surely spoil, for already considerable hot hay is now on the market and which has but little value.

Present good prices for hay are not due to lack of hay at interior points but the difficulties in getting transportation to market. The "car situation" is much relieved to what it has been and should further relief develop and cars get plentiful hay values would quickly lower.

Prairie.—Market dull and heavy owing to a but limited demand for wild hay of all kinds and grades. New receipts not large, but quite an accumulation of wild hay exists as it comes forward faster than buyers can be found to take it even at concessions of price. Much of the wild hay from the Northwest is out of condition owing to its either being exposed to rain or snow or pressed while damp or wet. The future market for wild hay is not good as our judgment confirmed by the action of market the past months indicates. There is a larger surplus yet to be marketed than is generally anticipated and values in consequence have been working lower.

Straw.—Good, sound, bright straw of good length in fair demand. Light receipts and offerings prevail.

located near good markets with good transportation facilities the Big Sioux Valley Land Company, Ltd., Ramsey Building, Sioux Falls, S. D., have some attractive farm land. Write them today for descriptive matter.

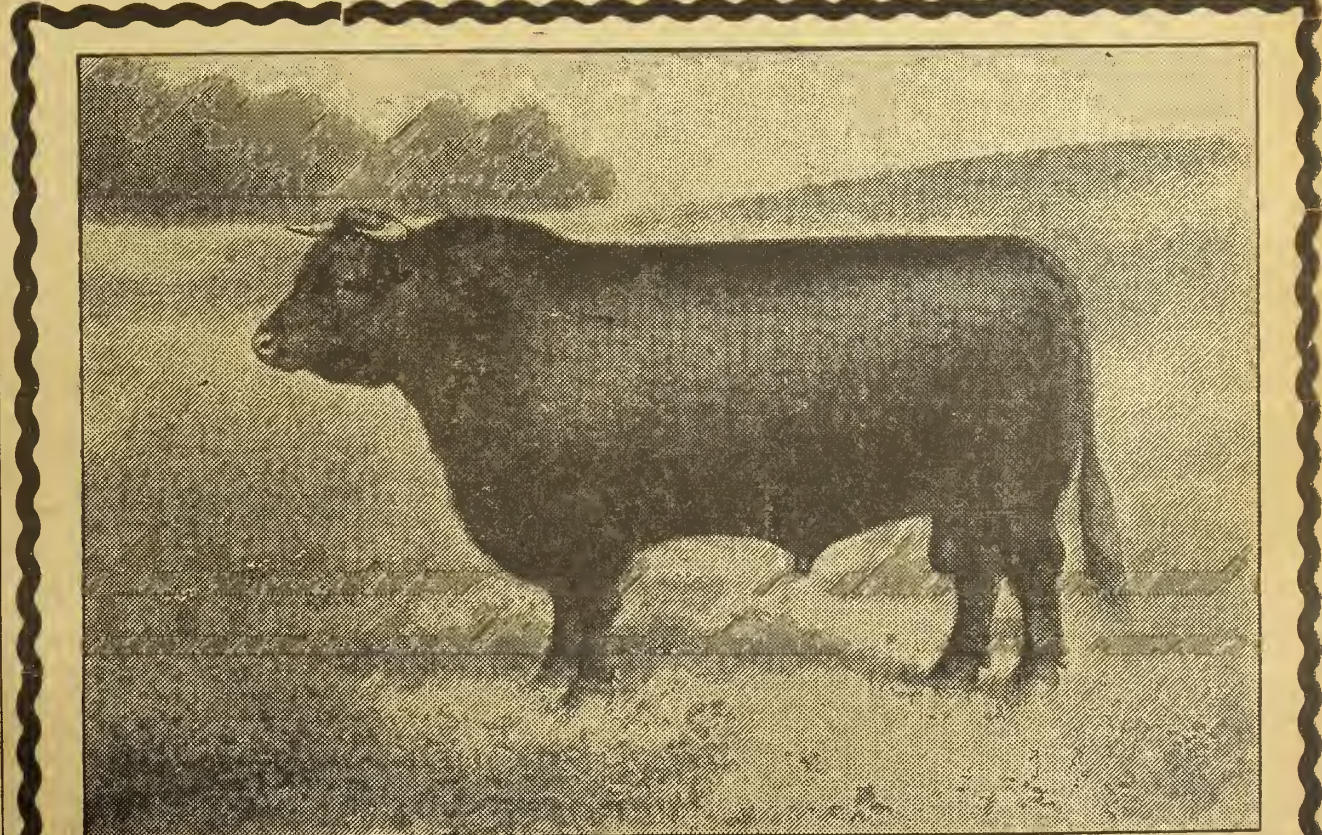

AGENTS WANTED—FARM VEHICLES TO SELL.

Those who are not actively engaged in business may find a good chance to employ their time as agents for the Century Mfg. Co., Dept. 750, East St. Louis, Illinois. This firm states that they desire representatives and will pay liberal commissions. They carry a full line of farm vehicles, including buggies, surreys and wagons, etc. By reference to their advertisement on page 22 you will see that they quote exceptionally low prices. Write for their free catalog addressing them in full.

THE MAN WHO GETS THERE.

Everybody knows Jones of Binghamton, "the man who pays the freight." Everybody knows he makes scales, good scales, for all sorts of uses and at prices as low as the quality of material and workmanship warrant but all who know Jones of Binghamton, perhaps do not know that he was "General Jones" before he was a scale manufacturer. Nearly fifty years ago he was a colonel of a

Massachusetts militia regiment. There were a good many militia regiments in the North, but Jones, not then of Binghamton, was the first to have his regiment in marching order, and he started with it to the capital. The only fact of interest was that after considerable opposition "he got there." He had, it seems, formed a habit, or acquired an aptitude, for getting there. He has never lost it. Somewhere it was once stated, on what seemed good authority, that the reason he became a scale manufacturer was that he saw the need of scales on every farm to save the farmer from loss by incorrect weight or erroneous guesswork; but scales were too high priced. The farmer thought he could better afford continuous small losses than pay the price of farm scales. That, General Jones said, could be remedied by making at a lower price, scales as good as the expensive ones in the market. That's why he went into the manufacturing business. He knew he could do it; he learned how to do it, and he got there, just as surely as he got to Washington. This is what he says to every purchaser of a scale from his factory: "This scale is personally guaranteed by me; here's my hand on it." Any Homestead reader wanting to know more about this low-priced high-grade scales should write to Jones of Binghamton, Box 418, Binghamton, New York for illustrated catalog.

The subject of the above illustration, Golden Lavender 222970, is as pure a Lavender bull as is found anywhere. We request those of our readers who are interested in Short-horns to study his pedigree which appears on page 28, in the advertisement of Geo. Bothwell's dispersion sale. Note the combination of blood lines that have been blended; the five top sires having been as great bulls as the breed has known. Golden Lavender will be found all that his breeding would indicate and his ability to transmit the good qualities he inherits is proven by his get that go in Mr. Bothwell's sale on April 22d. Golden Lavender sells, and should go to head some high-class herd.

## FIELD NOTES.

N. A. Lind, Rolfe, Iowa, has a few right good young Scotch bulls for sale.  
Some good young Scotch bulls are being offered for sale by Ernest Funke, Greenfield, Iowa.

A few Short-horn bulls and some good Duroc-Jersey sows are offered for sale by Jas. Dolison, Sac City, Iowa.

The large improved Yorkshire sows can be purchased of F. Rabeller, Leigh, Neb. He has a lot of choice young sows for sale at very reasonable prices.

About twenty-five good yearling and two-year-old bulls are offered for sale by A. Spooner, Mondamin, Iowa. These are sired by Beau Donald 12th, one of the greatest sons of old Beau Donald.

Select western Iowa and South Dakota farm may be purchased direct from owners by the plan advertised by Mr. S. R. Lucas, Anthon, Iowa. See page 23. Write him for his list of such farms. Mention this paper.

Ten carloads of dehorned steers ready for the feed lot or summer grazing are for sale by Mr. H. I. Ball, Fairfield, Iowa. They are a fine type of feeder and of different weights. Write for further particulars. Mention The Homestead and see page 27.

Ohio Belle, the \$2,000 Duroc-Jersey sow recently farrowed and now has ten fine pigs, half males, to the service of the sweepstakes boar Crimson Wonder Again. This is unusual good fortune of which Messrs. Poush, Strong and Secksmith have license to be proud.

Home-bred registered Percheron and Shire stallions at prices lower than the lowest are advertised by Messrs. W. H. Schnelle & Sons, of Lemonville, Mo., on page 27. With twenty-seven years of experience this firm should be able to satisfy buyers. Mention this paper when you write.

The time to book orders is at hand, and Mr. E. L. Nagle & Son, Chester White breeders at Deep River, Iowa, were never better prepared to assure their customers choice selections. They have five fall yearling boars which they offer at a bargain. The spring pig-crop has passed the hundred mark. All sired by the best of boars. See page 27, and mention The Homestead when writing.

Henry Brothers, Le Mars, Iowa, well-known Poland China breeders have fifty March pigs already and about 100 fall pigs. These are sired by the great boar Meddler 2d, Matchless Chief Jr., their sweepstakes boar and Matchless Chief. They also have a litter by Separator, the boar that stood 2d to Meddler 2d at the Illinois state fair, and a few litters by On Parade, a son of On and On. They

## DON'T BUY GASOLINE ENGINES

alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs less to buy—less to run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mrs. Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-THIRD YEAR.

have about ten sows to farrow yet. The boys went out this season and bought some of the very best sows, topping several of the best sales. These sows were bred to noted boars and they are preparing for the best offering that has ever been raised on their farm. We will tell our readers more about their herd later in the season.

Looking for Duroc-Jersey boars or sows? If so, write to Mr. C. M. Dewey, Shannon City, Iowa. He can supply you with some good summer farrowed boars of excellent breeding, including some fall boars by Proud Advance and Teddy R. A few sows well bred and to farrow summer and early fall litters. Write at once for prices or visit. See page 27. Mention this paper when you write.

Five extra good young Galloway bulls are for sale by Mr. W. W. Scholes, Ouawa, Iowa. Anyone looking for bulls of this breed should lose no time in seeing this breeder as males of this kind at the prices offered should be turned over quick. Some very choice eggs from B. Rocks are being offered by the Mr. Scholes at moderate prices. Write at once for further particulars regarding this offering. Mention The Homestead. See page 27.

W. J. Prather, Russell, Iowa, in sending in copy for the yearling Duroc Jersey boars, which he is offering, writes that they are first class specimens and not of the left-over kind. He had intended to keep them for his own use, but a sow, which he purchased in Kentucky and which farrowed very early has four splendid young fellows and this has changed his plans. The boars which he is offering are by Tom Davis, first at Nebraska fair, last fall, also two yearlings, one by Proud Advance and one by Top Notcher Again. Prices reasonable. Mention The Homestead when you write. See page 27.

Sol Frank, of Sioux City, Iowa, one of the best known Duroc-Jersey breeders in northwest Iowa, is doing fine so far this season, and has seventy-five March pigs on the place. Marie Antoinette, his first-prize sow at Sioux City last fall, and one of the greatest sows that was shown last season, has ten nice pigs by King Solomon, the boar uow at the head of his herd. Breeders who are going to want herd headers later on should secure an option from Mr. Frank on these pigs pretty soon, as they are going to be in demand. The most of his pigs are sired by King Solomon, but he also has a litter by Crimson Wonder Jr., a brother to old Crimson Wonder, Ohio Chief Again, a son of the famous old boar, Ohio Chief, and Spotless Top Notcher, a son of Lottie's Top Notcher. He has some good fall pigs, and he also has a couple of sows to farrow yet. Sol will be in good shape to supply his trade this fall and he will have the stock to do it with. Breeders won't make a mistake to speak for a pig at an early date, especially those out of Marie Antoinette.

Arch Brown & Sons, Waterloo, Nebraska, have about 100 pigs on hand, fifty of which are spring farrow. These are sired by old Kan't Be Beat, the \$6,050 boar. Echo King, Sure Winner, Red Knight and Onward Duroc, and he has a few sows to come in yet. They have some good looking pigs already and there should be a good outcome in many of these. This farm made an average of \$73 on their last brood sow sale and put up one of the best offerings of the year. Messrs. Brown have a good pig in Onward Duroc, a son of Morrison's Belle Top by Red Chief 1 Am. His dam is Emoua Lou by the noted boar Cole's Duroc. This pig has been coming well in their hands and if nothing goes wrong will have him out at the fair this fall. This firm have made rapid strides in the Duroc Jersey business of late years and have sent out some good stuff. They are good feeders and care takers, and when fall time comes around they always have some good pigs to show the boys. They expect to be at the Nebraska state fair and may possibly go over to Iowa to mingle with the boys and show them what Nebraska can do.

Taylor and Jones, Williamsville, Illinois, write regarding their recent stallion sales as follows: "Our sales keep up remarkably well and we are glad to report the following ones during the past week: Messrs. J. A. and F. Hoblit, Atlanta, Ill., bought one of our newly imported Shire stallions and G. F. Howard, New Providence, Iowa, came and selected an American bred two-year-old Percheron. F. M. Minshall, Viroqua, Wis., who came and bought a Percheron of us some time ago, returned and purchased one of our newly imported Shire stallions. This makes three stallions we have sold to Mr. Minshall within less than one year. L. F. Lomke, Bloomington, Ill., came and selected one of our best two-year-old American bred Percherons and A. L. Richards, Caro, Mich., gets a fine imported Shire. Albert Mills, Taylorville, Ill., to whom we have sold several stallions, came and bought a trotting-bred stallion and an imported Shire. Mr. Mills is in the business to stay and he surely has the goods to please his people. T. M. Davin, Tower Hill, Ill., to whom we sold two stallions last fall, now comes back and buys two Percherons, an imported and an American bred horse. We are proud of the fact that

ALASKA—YUKON—PACIFIC EXPOSITION, SEATTLE, JUNE—OCTOBER, 1909.

our former customers always come back when in need of a horse. This is not a bad recommendation to say the least." See page 32.

Smith Brown, Waterloo, Neb., the well-known breeder who was the first who had the temerity to pay \$510 for a Duroc-Jersey sow, and who came into considerable prominence as the first owner of the great Nebraska Belle is again giving his undivided attention to the hog business. For the past year or more he has been deputy sheriff of Douglas county, but has resigned that position in order to care for his own business, and henceforth he will be found shipping pigs and growing some good hogs. He went out this winter and topped many of the best sales, and he bought some good sows. He has seventy-five spring and about thirty-five fall pigs. These are sired by the sweepstakes bear Red Knight, Echo King, Belle's Model, Crimson Critic, Sure Winner and Duroc Onward, Fancy Maid. The sow that he paid \$815 for at the E. J. Brown sale, and one of the greatest sows that Gilbert Van Patton ever bred, has a litter of eight pigs by Red Knight. His Duroc Challenger sow will have pigs by Crimson Critic and his Junior Jim sow has a litter by Sure Winner. He has an Improver II sow that has a litter by Red Reuben, a son of old Gold Dust Jim, and he has a Kan't Be Beat sow that will have a litter by a son of Belle's Chief. He also has a Proud Advance sow with a litter of Crimson Critic pigs and a Crimson Wonder sow with a litter by Brown's Chief, a son of Belle's Chief. Mr. Brown has a splendid lot of brood sows for this year, and he has the best lot of pigs that has ever been on his place at this season of the year. He will be out this fall and will have a few good things to show the boys.

## JACK OR STALLION—SALE OR TRADE.

Mr. Bert Fry, Plainfield, Iowa, has a good young black jack, coming three, and a big home-bred stallion, 1,800 pounds, and a good worker which he is offering for sale or trade. Mr. Fry is a breeder and always has something choice on hand in the way of horses or Poland China swine. Write him at once for prices or state what you have to

trade. See page 27 and mention The Homestead when you write.

## FOR SALE.

Two Percheron stallions, coming four years old, recorded, will weigh between 1,700 and 1,800 pounds. Must sell at once.

Stanbra & Brown, Humboldt, Iowa.

## SPECIAL PRICES ON STALLIONS.

For the next thirty days Peter Hopley & Son, will make special prices on Percheron, Belgian and German Coach stallions. They will sell all they have now on hand before they sail for Europe for another lot. If our readers want stallions, it will pay them to go and see the above firm.

## P. S. &amp; S. BARR FINE STOCK.

The firm of P. S. & S. Barr, of Davenport, Iowa, have long been established in the business of breeding Poland China hogs, Short-horn cattle and Double Standard Polled Durhams. At the present writing they have two good Polled Durham and two good Short-horn bulls ready for service, and younger ones coming on. Their herd numbers some fifty head. That superb Polled Durham bull Buttonwood Marshall 17th, 5012 X P. D. and 259321 S. H., heads the herd. He is an Orange Blossom Scotch bull, sired by Field Marshal, a grandson of the World's champion cow Mary Abbotsburn 7th. The Short-horn bull is headed by the most excellently bred bull Scottish Prince 2d 185627, he by Baron Goldust 127367. He is a Scotch Dorothy, she by Field Marshal, Amos Cruickshank's phenomenal herd bull. The Barr Brothers will be pleased at any time to show stock to Homestead readers.

## PERCHERON STALLIONS.

Anyone wanting a Percheron stallion should lose no time in going and seeing what the Messrs. Rhea Bros. have in their barns at Arlington, Neb. They have one of the best bunches of yearling two and three-year-old stallions that we know of in the West and they are selling them at live-and-let-live prices. Rhea Brothers were at the Nebraska and Sioux City fairs this year and at the Nebraska fair won nine prizes on the eleven stallions which were exhibited. On their three-year-old stallion at the Nebraska fair they won first. At the Interstate out of seven horses entered they won five places, winning first and third on their three-year-olds, second on four-year-olds, second on two-year-olds and first on yearling. Rhea Brothers have been in the business for a number of years and have each year increased their business until now they are one of the largest firms in the west. In going through their fine hunch of stallions we find that they have paid special attention to the bone. It is hard to find what you would term a light boned stallion in the entire lot. They have also paid a great deal of attention to the selecting of horses with good feet and all their horses possess plenty of quality and style. Their three-year-old home bred horse Carlo, which won first at Lincoln and Sioux City will easily weigh a ton. He is a horse with plenty of quality and action. He is smooth and clean-boned and is strong all over. Anyone in need of a high-class stallion should visit this great horse farm. They have im-

## BROUGHT INQUIRIES FROM EIGHT STATES.

GOOD DEMAND AND PLENTY OF SALES RESULT FROM USING SPACE IN THE HOMESTEAD.

Mr. George W. Schwab, of Clay Center, Neb., one of the proprietors of the Pleasant View Stock Farm at Clay Center, Neb., writes as follows:

"My advertisement for Brome grass seed placed in The Iowa Homestead brought inquiries from eight different states and produced an excellent demand, all directly traceable to your columns."

## STEEL WHEELS

with wide tires double the usefulness of the farm wagon. We furnish them any size to fit any axle. Cheaper than repairing old wheels. Catalogue free.

EMPIRE MFG. CO., Box 103A Quincy, Ill.

ported horses for sale for those who prefer them to the home bred horse. Notice their announcement elsewhere in this issue.

GOOD SCOTCH SHORT-HORNS.

The old established firm of I. Barr & Son, of Davenport, Iowa, have long been patrons of The Homestead. For about a quarter of a century I. Barr & Son have had an announcement in these columns and have started many Homestead readers in the Short-horn business. They were pioneers in taking hold of the Cruickshank cattle, and proved the intrinsic worth of the thick fleshed, bardy north country cattle. A number of the best breeding bulls in this country were bred by this firm. They have made a specialty of furnishing choice groups of females as the foundation for new herds. At this date they have just sold forty bulls to go to Montana, but they have a few strictly choice straight Scotch bulls, one of which is about two years old, a Mysle. We noted another extra good yearling Mysle bull and a Duchess of Gloster also, all herd headers. The above bulls are all solid reds. Their announcement can be found in The Homestead on page 30.

GUDGELL & SIMPSON WILL SELL HEREFORDS IN KANSAS CITY IN MAY.

Gudgell & Simpson, of Independence, Mo., have selected Thursday, May 2d, for a sale of Hereford cattle, the sale to be held in the fine stock pavilion at Kansas City, Mo. For this sale they some time ago selected twenty yearling bulls and thirty two-year-old heifers that are well along in calf. Breeders who have used Gudgell & Simpson stock as a foundation, find that it breeds on and proves more satisfactory as time goes on. That this is so is on account of the impressive sires that have been in service in the Gudgell & Simpson herd. The blood of Anxiety 4th, Don Carlos, North Pole and Beau Brummel has been so mingled as to produce stock that breeds on, no matter in whose hands they go and has caused the most progressive breeders to patronize the herd for herd headers and females both for show and breeding purposes. The handling of these Herefords has had much to do with the success of their usefulness after they have left Gudgell & Simpson's pastures. It is not their custom to indulge in any amount of high fitting and it is scarcely necessary more than to halter break, as the Gudgell & Simpson Herefords are noted for their easy keeping and thick fleshing qualities. The man who has yet to buy a herd bull should not overlook the present offering and those who are in need of some high-class females should buy now. The man who contemplates buying a foundation herd should not delay as every month he puts off buying the higher is he going to be forced to pay, as the pure-bred cattle business is on the upward grade. Now is the time to make a start and the investment of a few hundred dollars in good cattle will yield larger returns than in any business venture of like nature. The twenty bulls that sell in this sale are by sons and grandsons of Beau Brummel and Paladin, a son of Lamplighter. The dams are Anxiety bred cows, some being cows that have been consistent winners at leading shows, also producers of stock that has won and sold at good round figures. These bulls are all yearlings of serviceable and just coming of serviceable ages. The heifers are two-year-olds and all are bred. The larger part of these are by sons of Beau Brummel that are in service in the Gudgell & Simpson herd. Several are bred by Paladin, a son of Lamplighter that has proven a great heifer breeder. They are bred to such bulls as Bright Donald, second prize aged bull at the St. Louis world's fair, Beau President, Beau Donald 3d and other

of Gudgell & Simpson's herd bulls. The Gudgell & Simpson herd was founded in 1876, has been prominently before the people since and has been doubly conspicuous on account of the high class character of the stock produced. The success of this great breeding establishment is largely due to their business methods, their desire to see every animal that leaves the herd do the purchaser good and the carefulness with which all matings have been made since the establishment of the herd. A better place to buy or a better time cannot be found as pastures are ready to turn on and the cattle can be carried over the next six to nine months at a very moderate cost. In future issues more will be said of the offering and in the meantime we want every reader interested in good Herefords to write Gudgell & Simpson for a catalog. See this page for the advertisement of the sale and kindly mention this paper when writing them.

FIRE CANNOT STOP THEM.

Dodd & Struthers, the well known manufacturers and wholesale dealers in copper cable lightning apparatus of Des Moines, Iowa, have given the business world a new basis for estimating the strength of their concern in a financial way. Six weeks ago their splendid factory building, five stories high and over a hundred feet long was gutted by fire. With remarkable enterprise and stamina the repair was begun at once and now the factory is turning out goods as usual. This is a great achievement indeed, and was only possible on account of the energetic policy of the management. Their advertisement appears on page 19 and we would advise our readers that their wants will receive as careful attention as ever by this firm. In writing for their booklets kindly mention The Homestead.

IAMS' STALLIONS.

Frank Iams writes: "Mine son, Ike—Get into the band wagon, all railroads lead to St. Paul, Neb., (at two cents a mile). The home of the largest individual owner and importer of Percheron, Belgian and coach stallions in the United States, Frank Iams of 'Peaches and Cream' stallion fame, has opened up a new barn of sixty stallions (not seen by the public before). They are his famous prize winners at the Illinois, Iowa and Nebraska State Fairs, and the '1907 show horses' selected in Europe for the big state fairs of 1907. At the Illinois State Fair he won second prize on four-year-old Percheron and it took a \$10,000 stallion to put him second. Iams' three-year-old Percheron won two prizes out of the four there (not horses shown). At the Iowa State Fair Iams' Trallala defeated the champion Percheron stallion of France. At Nebraska State Fair Iams' Percheron and Belgians won every first prize (bar one) and both sweepstakes prizes, and grand sweepstakes prize over all breeds, in two, three and four-year-old classes. His 1907 show horses are the 'best ever.' These horses and more are all in his barns and must be sold to make room for his '200 head' importation. Ike! 'It's a cinch' that Iams is saving thousands of dollars to stallion buyers. He sells winners and sons of winners at \$1,000 and \$1,500 (few higher), guaranteed better than any \$3,000 to \$5,000 company stallion sold by 'gold brick' stallion salesmen. If you don't find this true, and every statement in catalog, you get the \$500 hung up. Iams' twenty-five years of successful business, and his 'square dealing,' keen judgment, his characteristic advertising, his independent stand against the giant stallion trust, having the lig ton 'black boys,' your kind that sell themselves, and no questions asked. It's 16 to 1 that Iams talks less and sells ten times as many stallions as any man in the United States. He is an easy salesman, and people know that they get a square deal with Iams. His stallions are so good that they do not need a 'gold brick' salesman or auction block to sell them. They sell themselves, they are the salesmen. Iams has 'lifted the lid' again and is knocking 'high prices' on stallions off the 'Xmas tree. It is 'bargain day' at Iams' stallion barns. All your folks will take off their hats and say, 'Iams has the goods' as advertised. Iams wants your business. That's why he advertises. 'He will put your hair in a curl' with swell ton stallions and save you \$1,000 or \$1,500 and a better stallion. Then you can wear diamonds, not the peddler or auction block man. You say, 'Why can Iams sell better stallions at half the price of others?' Iams buys and sells every stallion himself at his home barns. He buys stallions by 'special train load,' eighty to 150 at a time. He speaks the languages, saving you 20 per cent. He is not in the stallion trust, saving you \$300. He pays no slick salesman \$1,000 to sell you a fourth-rate stallion. He has no two to ten men as partners to share profits. He pays spot cash for his stallions, owns his farms, houses, barns, stocks and stallions. He sells stallions by 'hot advertising.' One thousand dollars to \$1,500 insurance placed by Iams on stallions. Our illustration is Iams' Prusant-de-Luroux (293344), black Belgian, four years old, weight 2,310, a sweepstakes winner, 'a peach,' at \$1,500. He is a smooth-finished drafter of big size, big, clean bone. A sensational 'Peaches and Cream' stallion that don't need any booster or hammer thrower to sell him. You will keep 'a-shovin' and a-pushin' until you own him when you see him at Iams'. Iams has on his selling clothes; they fit all buyers. No man who will talk business and will pay cash or give bankable note gets away from Iams. Write for Iams' 1907 horse catalog with 100 illustrations, an eye opener that will save you thousands of dollars."

A LITTLE TALK ABOUT FALFURRIAS.

A representative of this paper, Mr. L. L. Byram, recently called on Mr. G. R. Speilhagen, vice-president and manager of the Falfurrias Immigration Co. Mr. Speilhagen returned to Kansas City, where he is making headquarters, a few days ago. In talking of the wonderful Gulf Coast country he said: "I cannot understand why a farmer will stay in the North and farm \$100 land where his crops do not pay over \$15 an acre at most when he could go to the Falfurrias country and buy land—fine, open prairie—at \$15 per acre now, that will produce crops that pay from \$50 to \$300 per acre per year. I cannot see why a man with a family growing up around him should not have the interests of his boys and girls at heart enough to go to a country where they would not have to work sixteen hours a day, six months in the year in order to keep alive the other six.

FAGAN, BROWNING & McCABE.

HERSMAN, ILL.

I cannot see why any farmer wants his boys to buy high-priced land and go 'head over heels' in debt, and slave all the days of their life to pay for forty or eighty acres. I want to ask the farmer who lives on high priced land 'how did your father and grandfather get their start? You know they got it by coming to the country when it was new—when land was cheap. Even you may have a good farm—but what about the young people? Furthermore, if you own 160 acres in this country you could buy five times that in the Falfurrias district, and you could take it easy the rest of your days—where now you have to work like a slave and your wife has to do the same to keep up the farm. The increase in value in land at Falfurrias would be more each year than the profits on the crops where you now live—and the crops at Falfurrias pay from five to twenty times as much as yours. Don't you think you owe it to yourself and family to at least investigate the wonderful Gulf Coast country at Falfurrias which you have heard so much about. All the other land companies in the Gulf Coast country are asking \$25 an acre for land. We offer you as good or better land now at \$15 per acre, and we have a tract of 70,000 acres to select from. One reason we sell cheap is that we own the land we offer, and another reason is we have to live among the people we sell to and we want them to prosper and are giving them every opportunity we can. We want good people to settle in our country and we're getting them. Every man who comes to Falfurrias does well. We help them and see that they do well, because if their land increases in value ours becomes more valuable and eventually it pays big, in dollars and cents, to say nothing of the good we may do. I want every reader of this paper to send for our book, Facts From Falfurrias Fertile Fields. It is free, and is chock full of interesting reading about this wonderful new country where thousands of farmers who formerly lived in the north, are now living and making a splendid home for their families. The publishers of this paper request every one of its readers to send to G. R. Speilhagen, Vice-Pres. and Manager, Falfurrias Immigration Co., 3 West Tenth St., Kansas City, Mo., for the above mentioned book. The Falfurrias Company is made up of men who are trying to develop their country and are all gentlemen of excellent standing, fully able and willing to carry out their promises. Read the advertisement which Mr. Speilhagen has in this issue and write him at once.

100 CHESTER WHITE  
March Pigs and More Coming

Sired by such noted boars as Pioneer, Neponset Henry, Top Notcher, Perfection Model, I Will Win and others. Now is the time to book orders. Fine selections assured. Also five September yearling boars in good condition. Write or call.

10 Points to Consider When You Buy A Buggy.

Buy direct from the factory. My \$45 Knox Special Top Buggy is sold that way. No dealer's profit for you to pay. No salesmen or jobbers for me to pay to sell my buggies. I sell direct to you. Get my Knox Buggy on 30 days' trial. Use it a month, test it in every possible way, and send it back if not satisfied. And I will pay the freight both ways.

Be sure your buggy is guaranteed by a reliable maker. I guarantee the Knox for two years. That is another advantage of dealing directly with me.

My \$45 Knox Top Buggy is a comfortable rider. It has a wide, roomy seat. That very same buggy at your

local store sells from \$75 to \$90. So you easily save \$30 in jobber's and dealer's profit.

The body is 24 inches by 54 inches. The gear is oil tempered. Long distance, full clipped axles. Easy riding spring. Full plated reaches.

The shafts and wheels are guaranteed to be split hickory. Oval edge tires.

My Knox buggy is handsomely painted and tastily upholstered.

It has a four bow leather top. In short, it's the leader of my big line of buggies, carriages and vehicles of all kinds. Remember, I sell them all straight from shop to buyer, guaranteed, and a big saving to you.

Send for my big buggy book. It's free. Tells more about my line. But order my \$45 Knox Buggy now, right from this advertisement. You are safe. Address

R. M. Knox, President,  
Western Harness & Supply Co.,  
613 Commercial St., Waterloo, Iowa.

P. S. Have been advertising in The Iowa Homestead for six years.

**A Large Shipment to the United States.**

In the course of their frequent shipments to the United States Messrs. Truman give ample evidence that they mean to keep up to the high standard that they have already set. Recently a costly shipment has again been made to the Pioneer Stud Farm, Bushnell, Ill. Among the stallions is a massive two-year-old, Bulwick Lion Heart, from Messrs. Forshaw & Sons' stud. His sire, Leeds Lion (by Nailstone Coeur de Lion) was a horse of some 2,250 pounds weight. His dam, Knighton Flash Girl, also belonged to Messrs. Forshaw, and was a frequent prize winner. Thorney Teamster II., a very good six-year-old stallion, goes from the stables of Mr. Joseph Topham, Thorney, his sire being Thorney Topsman, and his dam Thorney Spot. A beautiful six-year-old, came from Mr. M. Pate, of Ely, Girton Senator, his sire being Markeaton Royal Harold and his dam Scroptou Princess. Another Shire stallion was bought from Mr. W. E. Vawser, March, Marden Lad, a four-year-old by Hertfordshire Lad. He secured a second at the Royal, and numerous firsts at other shows. Mr. J. Wilson, Murrow, contributes a massive four-year-old stallion, Gedney Premier, by Moulton What's Wanted, from Star by Extraordinary. The Hackney stallions number two. One comes from Sir Walter Gilbey, viz., the three-year-old Bouncing Connaught. He is an exceptional goer, and has taken several prizes. The other is a 16h. in. bay, Bally Breeze, bred by the Right Hon. F. Wrench, and he is a splendid walker, with the necessary action. The Shire fillies were an excellent lot. No fewer than five two-year-olds go from the 'Boro' Pen stud of Mr. F. W. Griffin, and Boro' British Queen and Boro' Empress Queen are sisters by the famous Blythwood Conqueror, and are out of the noted prize mare Rokeby Hypatia. Another is Easter Eve, bred by the Hon. Louis Greville, a bay also by Blythwood Conqueror and out of Easter Gift. Boro' Wallflower has also a remarkable strain of blood running through her, for she has as her sire the celebrated horse Hendre Conqueror, by Prince Harold. The last of the five is Orange Blossom, by Boro' Menestrel, sired by the famous Menestrel. Mr. Thomas Gee, Thorney, sends a couple of grand two-year-old fillies, viz., Wrydeland's Queen, sired by Holker Whip and out of Gothic Pansy; and Wrydeland's Gem by Blythwood Hero, out of Wrydeland's Valentine. Mr. Ernest Gee, Thorney, contributes five of excellent character. The three-year-old filly, Elder Bells, is by Buscott Harold, and she has for dam Elder Queen. The others are Elder Buttercup by Knebworth Conqueror, out of Elder Pride; Elder Black Bess by the same sire, out of Tolworth Regina; Elder Bessie by the same sire out of Elder Gift; and Beachendon Caronia by Thrupp Rival, out of Beachendon Diamond. Mr. C. Morbey has parted with the following: Two-year-old fillies: Beechurst Primrose by Moulton Ringleader, out of Sheldford Sash; and Beechurst Beauty by Locomotion, dam Tintbury Bounce; four-year-old mares, Barrow Gem, sire Condon Harold; and Dogsdjke Duchess, sire Moorland Paxton. There are a trio from the Bury stud of Mr. John Bothwell, all fillies, viz., Bury Breeze, a

two-year-old, sired by Tom VII; Bury Bangle, a three-year-old by New King; and Bury Dolly, sired by New King. Mr. H. H. Truman, of March, also despatches the following: Mare, March Flower, sire St. Albans, which was purchased by Mr. W. Bellamy, of Wimpington, for 400 pounds, and her dam is by Helmdon Emperor, who was bought some years ago by Mr. J. H. Truman from the late Queen; two-year-old fillies, March Rose, sire Normoor Statesman, dam Bury Rose; March Blackbird and March Ladybird, both sired by Mr. Truman's old horse Ben

Bolt. The following quartet have been obtained from Mr. W. E. Vawser, March: fillies, March Whitefoot, sire West Fen Harold, dam West Fen Beauty; March Diamond, sire Clumber Fashion, dam West Fen Diamond. Altogether about forty were shipped. (From the London (England) Live Stock Journal. March 22, 1907.)

Gulford, Missouri is coming right to the front in its live stock interests. One of the breeders of Poland Chinas, who will be heard from in the near future is Mr. B. O. Hunt, of

Ravenwood. He has gotten together a nice bunch and will undoubtedly make the business profitable for himself as well as those who secure any of the results of his breeding. Mr. J. D. Gates, a neighbor, is also well known in that community as a breeder of Poland Chinas. He is fitting some hogs for fall fairs now and his past experience as an exhibitor warrants the statement that he will have some good stuff in the pens at show time. Sometime in the fall he is expecting to have a sale and it will undoubtedly contain some very attractive numbers.

GERMAN COACH STALLION OZON 3311

A 2 year-old, coming three, German Coach stallion, owned and for sale by Peter Hopley & Son, Lewis, Ia. He is a good mover and will weigh 1,500 pounds. He is only one of the many now quartered in the Hopley stables. He is a top notcher and will be priced right.

**Around Sheridan, Missouri.**

Recently a representative of this paper called on Mr. D. R. Richabaugh, of Sheridan, Missouri. He found the herd of Short-horn cattle, headed by Acorn Prince, a pure Scotch bull of great quality and conformation and held in high estimation as a breeder. The cows are all Scotch topped and a nice, smooth bunch. A few young bulls are for sale. Another good herd of Short-horns in this vicinity is that of Mr. Edward Gates. His favorite breed of hogs is Poland China and contains some choice stock. A sow shown from this herd last fall won second at the Iowa State Fair and at the St. Joseph Interstate Fair. The cattle are doing well and the herd is headed by a good Scotch bull. One of the prosperous Hereford breeders of north-west Missouri is Mr. Jesse Engle, of Sheridan. His herd of sixty head makes a fine collection to pick from. At the head is one of the best bulls in that territory and some of his get will be for sale in the near future. For the man looking for good stock Sheridan is a good place at which to drop off.

**More of the Dispersion of Bothwell's Clover Blossom Short-horns.**

We again wish to call the attention of our readers to the dispersion sale of the Clover Blossom herd of Short-horns, owned by Mr. Geo. Bothwell, of Nettleton, Mo., which will be held at Hamilton, Mo., on Monday, April 22d. In all, sixty lots are cataloged and that it is a breeders' sale and a sale of breeding cattle is seen by the fact that over fifty of the entire offering are cattle that have been bred by Mr. Bothwell, and that thirty-seven sell with calves at foot or are soon due to calve—thirteen are yearling heifers and ten are bulls. To the prospective buyer this should mean much, as it will be remembered that when on the fair circuits of 1900 and 1901 Mr. Bothwell was showing cattle of his own breeding. Last week we made mention of the bull end of the offering which is headed by Golden Lavender, one of the greatest bulls to go through a sale ring this year. This week we shall deal with the female section of the offering, and in so doing are reminded of the sensational heifers, Queen of Beauty, Breeder's Dream, Wilhelmina and others (that with the junior champion bull, Nonpareil of Clover Blossom, and Nonpareil Hero, the first-prize winner at all the leading shows) were the get of either Grand Victor or Imp. Nonpareil Victor, the two herd bulls to which the Clover Blossom herd is indebted for so much of its popularity and the many good things that are found there. Over one-half the cattle in the sale are the get of these bulls and breeders will find much to select from. Mr. Bothwell in the latter part of the 90's made an importation and some of those imported cows have been important factors in building the herd, but not so much so as Imp. Nonpareil Victor that was selected personally by Mr. Bothwell from Mr. Duthie's herd, where he had done some service. Mr. Duthie later offered Mr. Bothwell good advance, as the calves got by Nonpareil Victor were of great promise. Of the imported cows that sell, the one that should please the most exacting is Imported Ethel, that was bred by Mr. Geo. Donaldson, of Netherdale, Scotland. She is a six-year-old cow and was got by a son of Imp. Nonpareil Victor that was out of a granddaughter of the great Star of Morning. Imp. Ethel's dam, Lily of Netherdale, traces close to such sires as Elocutionist, Gravesend and Heir Apparent. Imp. Ethel will be found an ideal Short-horn cow, carrying beef from the hoofs up and swinging an udder that would delight the strongest advocate of the heavy-milking sorts. She sells with heifer calf at foot that was got by Golden Lavender. The lucky purchaser of this pair will find he has in them the kind so much sought after and so seldom found. Both are good roans. Imp. Winifred 4th and her six-months-old heifer calf by Golden Lavender will be found a profitable pair to buy, as this has been one of Mr. Bothwell's best producing cows. She is a full sister to Watchword, winner of first prize both as a yearling and two-year-old at the Highland Society shows, and was also the dam of Collynie Wimple, Queen of Honor and Wilhelmina, all prize-winning heifers. Imp. Winifred 4th was got by Scottish Archer, he by Cumberland by Pride of the Isles. Scottish Archer's dam was also by Pride of the Isles and out of a daughter of Champion of England. Imp. Winifred 4th's dam, Winifred 2d, was got by Gravesend, a grandson of Pride of the Isles, and her dam, Winifred, is a granddaughter of Lord of the Isles. Two of her daughters, Maid of Honor and Clover Blossom Wimple, will also be found desirable. Both were got by the great Imp. Nonpareil Victor and are five and four years of age. Maid of Honor is due to calve by sale day to the service of Golden Lavender. She has a yearling bull (Lavender's Favorite) in the sale. She is one of the good kind and a producer. Clover Blossom Wimple is the four-year-old and possibly as great a producing cow as is owned at Clover Blossom Farm. Her yearling son, Lavender's Best, and the five-months-old bull by Golden Lavender that sells with her, will prove the assertion. The man who buys the pair will get a show bull and a future herd bull. A fine Lavender cow is Keep Safe, a four-year-old daughter of Grand Victor and Imp. Sittytton Lavender 5th that was got by the great Pride of Morning and out of Lavender 46th, a granddaughter of Roan Gauntlet and Pride of the Isles. She sells with heifer calf at foot by Nonpareil Conqueror. This pair will show for themselves on sale day. Nonpareil Queen, a full sister in blood to the champion, Nonpareil Hero, being by Imp. Nonpareil Victor and out of Grand Nerissa 4th by Grand Victor, is another desirable one. She is heavy in calf to Nonpareil Conqueror. A number of females by Imp. Wanderer's Last are also good things to buy. Imp. Wanderer's Last was bred by Mr. W. S. Marr and is of his famous Missie tribe. A few by other sires are also

**MAPLE LAWN HEREFORDS**

FOR sale, (Imp.) Isam 145738, and also choice young bulls, ranging from 11 to 24 months old, well bred, and good individuals.

**A. F. HAGER,** AVOCA, IOWA.

listed. The American-bred sorts are fully the equal of the Scotch sorts and from two to five Scotch crosses will be found in each pedigree. It was the cross of Grand Victor and Imp. Nonpareil Victor on the Rose of Sharon, Princess Goodness and White Rose tribes that produced so much good show stuff for Mr. Bothwell. For the past two years Mr. Bothwell has been operating a profitable dairy business, milking these Short-horn cows and demonstrating that it pays to look to the milking end of the cow. This is greatly in the buyer's favor and should also prove attractive to the man hunting the so-called dual-purpose sort, as Mr. Bothwell can show some extraordinary milk cows among these high-class Short-horns. The man who wants a bull from a heavy-milking dam will find him here. See page 28 for Mr. Bothwell's advertisement and if you have not already received a catalog write for one, study the breeding and if in the market for some good Short-horns arrange to be with him sale day. Kindly mention this paper when writing.

# Trumans' Champion Stud

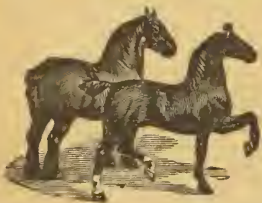

We have the choicest lot of

## IMPORTED SHIRE and HACKNEY STALLIONS

now in our stables we ever owned. EVERY ONE FOR SALE and good enough for any SHOW RING. Thirty-six SHIRES crossed the ocean, arriving at Bushnell April 1. Every one is the "TRUMAN KIND;" you know what that means—matured STALLIONS, weighing 2,300 POUNDS. Don't buy stallions that have been CULLED OVER all fall and winter, but COME TO BUSHNELL and see FIRST-CLASS, SOUND STALLIONS imported this winter and spring.

30 SHIRE MARES FOR SALE. A few PERCHERON and BELGIAN STALLIONS cheap, to close them out. Write for particulars and catalog.

**Trumans' Pioneer Stud Farm,**  
Box 918, - - - Bushnell, Ill.

## TAYLOR & JONES'

New Importation

ARRIVED MARCH 9TH.

Our barns are now filled with imported and home-bred PERCHERON, SHIRE and BELGIAN STALLIONS. Don't you know that PUBLIC SALES of stallions only indicate a cheap lot of trash, or that the sellers are men who CAN'T DO A BARN BUSINESS? Did you ever know a merchant to sell groceries at auction? Would you buy a gold watch at auction? We use no slick salesmen to sell our horses. They are good enough and our reputation so clean that we are selling more horses than ever before, which proves our prices are the lowest, our horses the best and our manner of doing business is satisfactory to our patrons. For catalog address,

PUBLIC SALE OF SHORT-HORNS, JUNE 4, 1907.

## Rhea Bros., Arlington, Neb.

Breeders of Percheron Stallions. We exhibited 11 stallions at late Nebraska State Fair and won 9 prizes as follows: 2d and 4th on four year-olds, 1st on three year-olds, 2d, 3d and 4th on 2 year-olds and 1st, 2d and 3d on yearlings. At Interstate Fair at Sioux City, Ia., we had 7 entries and got 5 places, 2d on 4 year-olds, 1st and 3d on 3 year-olds, 2d on 2 year-olds, 1st on yearlings. Our horses are home-bred and acclimated, have size, bone, quality, are ruled in pastures, not pumped with grain and drugs, thus insuring good service from the start. Every stallion sold under a positive breeding guarantee. Arlington is on main line N. W. Ry., 25 miles northwest of Omaha, eight miles east of Fremont.

## M. L. AYERS - SHENANDOAH, IOWA.

Importer and Breeder of

## HORSES.

# FRANKIAMS'

"TOP NOTCHERS," largest pair of four-year-old Percheron and Belgian stallions in the United States; weight, 5,080 pounds; winners of first prizes and SWEEPSTAKES prizes (over all) at Nebraska State Fair, 1906. A pair of "NUT CRACKERS"—"IAMS' KIND." Iams' "HORSE SHOW" at Nebraska, Iowa and Illinois State Fairs WAS the "TALK" of the "PEOPLE AND PRESS." His 2,500-pound Percheron, "TRALLALA," defeated the "CHAMPION WINNER," "BIBI," of France at Iowa State Fair. Iams stirred up "THE ANIMALS HERE;" "THEY SAT UP AND TOOK NOTICE" of his WINNERS and SONS OF WINNERS. He HYPNOTIZES buyers with "TOP NOTCHERS" at "LET-LIVE PRICES." "Whoa! SHY ANN." Buy a stallion today, save \$300, and get choice of IAMS' BARN, filled to the roof with

## 75 Percherons, Belgians and Coachers 75

2 to 6 years old; weight, 1,700 to 2,560 pounds; 90 per cent "BLACK BOYS," 50 per cent "TON STALLIONS." All REGISTERED and APPROVED. Mamma, Iams is a HOT ADVERTISER, but he has "THE GOODS." He sells "TOPPERS" at \$1,000 and \$1,500 so good that they need NOT be "PEDDLED" or put on "AUCTION BLOCK" to be sold. He has on his "SELLING CLOTHES;" they fit all buyers. No man with MONEY or BANKABLE NOTES gets away from Iams. He buys, owns and sells more stallions than any man in United States; saves THOUSANDS of DOLLARS to STALLION BUYERS. He is not in the stallion trust. Iams places \$1,000 or \$1,500 insurance.

## \$1,000 SAVED AT IAMS \$1,000

KEY! What a rich graft these "SLICK STALLION SALESMEN" are working on the honest farmer, selling fourth-rate stallions at \$2,000 and \$5,000. Iams sells "TOP NOTCHERS" so good, big and cheap THAT THEY DO NOT NEED TO BE PEDDLED TO BE SOLD. Mr. Buyer, see Iams' stallions yourself. Take no "GOLD BRICK STALLION SALESMAN'S WORD." Iams has "THE GOODS" you read about. His establishment is worth going 2,000 miles to see. Iams makes competitors "holer." He is knocking "high prices" out of the Christmas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. George, dear! Buy a stallion of Iams. His \$1,200 stallions are MUCH BETTER than our neighbors paid those Ohio men \$4,000 for. Then I can wear diamonds. Iams speaks the languages, buys direct from BREEDERS, pays no BUYERS, SALESMEN or interpreters, has no two to ten men as partners to divide profits with. Iams guarantees to sell a BETTER stallion at \$1,000 to \$1,500 than are sold to stock companies for \$2,500 to \$5,000 by SLICK SALESMEN, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalog on earth. REFERENCES: St. Paul State Bank and Citizen's National Bank.

## ST. PAUL, - NEBRASKA

### OUT OF THE RING BUT STILL IN THE LEAD

We have been ruled out of the International Fat Stock Show ring in Chicago, and disbarred from the association privileges for one year.

BECAUSE we refused to submit to the decision of one judge, knowing that he, however honest and capable he might be, was selected solely by our only would-be competitor, we being refused another judge to act with this one, drastic action was taken by the superintendent of the horse department, barring us from showing, not only in the German Coach classes, but also in the Belgian and Percheron classes, in which we had several entries, and well prepared for the battle. It is currently reported among horsemen who are on the "inside," that the measures adopted to deprive us of a fair showing grew out of plans laid by an envious breeder. However true this may be, we have reasons to suspect that the generally recognized merits of the Oltmanns breedings and importations have created an uneasiness in certain quarters. In fact, we know of more than one preconcerted effort to gain from us by unfair means, that which cannot be fairly gained. In the show world we stand without fear of successful competition.

The individually given each one of our animals places them in a class by themselves. In our breeding stables, both in Germany and America, every effort is made and with unvarying success too, to bring out most prominently those qualities of equine flesh that have given fame to the German Coach Horse and won for them a high place. On two continents the name we carry stands for excellence. In horse flesh. We are proud of our record as breeders and importers of German Coach as well as Percheron and Belgian breeds. Our buying facilities are unsurpassed. The senior member of our firm, Landshaftsrat O. V. Oltmanns, resides in the German Coach Horse district, and within four hours ride of the Percheron and Belgian Horse district of France and Belgium, and is ever on the lookout for the finest and best of the country produces. We buy better horses at less expense than any other importer can possibly do, and for that reason can give you a better horse for less money than you can buy elsewhere. Write us for full particulars or call at our barns at Watseka, Ill., or Ft. Worth, Tex. Though ruled out of the ring we are still in the lead.

OLTMANN'S BROS., Leer, Germany, Ft. Worth, Texas, Watseka, Illinois.

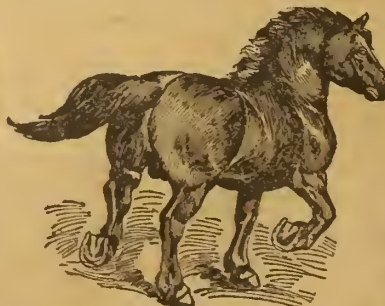

## PINE RIDGE STOCK FARM

Has the highest and best barn in the United States and it contains the BIGGEST and BEST lot of Percheron and French Draft Horses.

The last chance to obtain a colt by SAMSON 2738, as his last colts are now yearlings. Over 150 head of horses showing more bone, size and quality than any similar number in America. TAYLORBILT P. 35719 and F. D. 12610 now at head of the stud. Prices below competition.

Born at Moose Jaw, Sask., Can., in charge of E. E. Muxey.

When writing please mention this paper.

VOL. LII. NO. 16.

DES MOINES, IOWA, APRIL 18, 1907.

WHOLE NO. 2596

## AMERICAN MEATS ADMITTED INTO GERMANY.

Nothing can be more important to the economic interests of the western farmer than a steady, reliable market for meats at remunerative prices. Every element in such a market is indispensable. The price must be sufficiently high to compensate the producer for all the labor and capital he puts into the finished animal, directly or indirectly. It must cover the cost of transportation and the losses by disease, accident and unfavorable seasons. It must include a reasonable profit. The market must be even, steady and reliable, or the uncertainty resulting from the opposite condition of things will be harassing if not unbearable. There will be ups and downs in any free and unrestrained market, but the fluctuations should be within moderate limits.

Such a market must of necessity be broad-based, covering a large consuming population, so that unfavorable local conditions in one direction may be counterbalanced by favorable markets elsewhere. For this reason, every foreign market added to our great home

market tends to bring about the steadiness and reliability of demand so desirable from the farmers' point of view. Even if the foreign market is not extensive, if it enables us to dispose of a surplus that is clogging and depressing the domestic traffic in meat, it is a boon to the producer.

One of the greatest obstacles the American meat producer has had to contend with for seven years past has been the disposition of the German government to impose harsh and unreasonable restrictions upon the importation of American meats into that country. These restrictions have been established on the ground that dressed meats from the United States were not adequately inspected and were therefore a menace to the health of the German people. Exaggerated statements regarding the prevalence of trichinosis, Texas fever and other disease have been proclaimed in the German reichstag and published in the German press. The government of the United States has dealt vigorously with the question, providing for closer inspection and meeting all the objections of German editors and politicians; but until recently agrarian influences have

prevented the German government from receding from its position.

At last, however, the scarcity of meats in Germany, resulting in prices so high as to cause widespread dissatisfaction and unrest in the cities, has forced the imperial authorities to take a more liberal view of the question. It is now announced at Washington that, as a result of negotiations conducted by our Secretary Root and Baron Speck von Sternburg, German ambassador to this country, Germany has consented to give American products the benefit of the minimum tariff law of the empire and to authorize the admission, upon payment of the usual duties, of American bacon and dressed meat. In return for this concession, Secretary Root has agreed to add sparkling wines to the list of articles named in section 3 of the Dingley tariff act, lower duties on which have been enjoyed under previous reciprocity agreements. The list includes argols, crude tartar, crude wine lees, brandies and other manufactured or distilled spirits, still wines, vermouth, paintings, pastels, drawings and statuary.

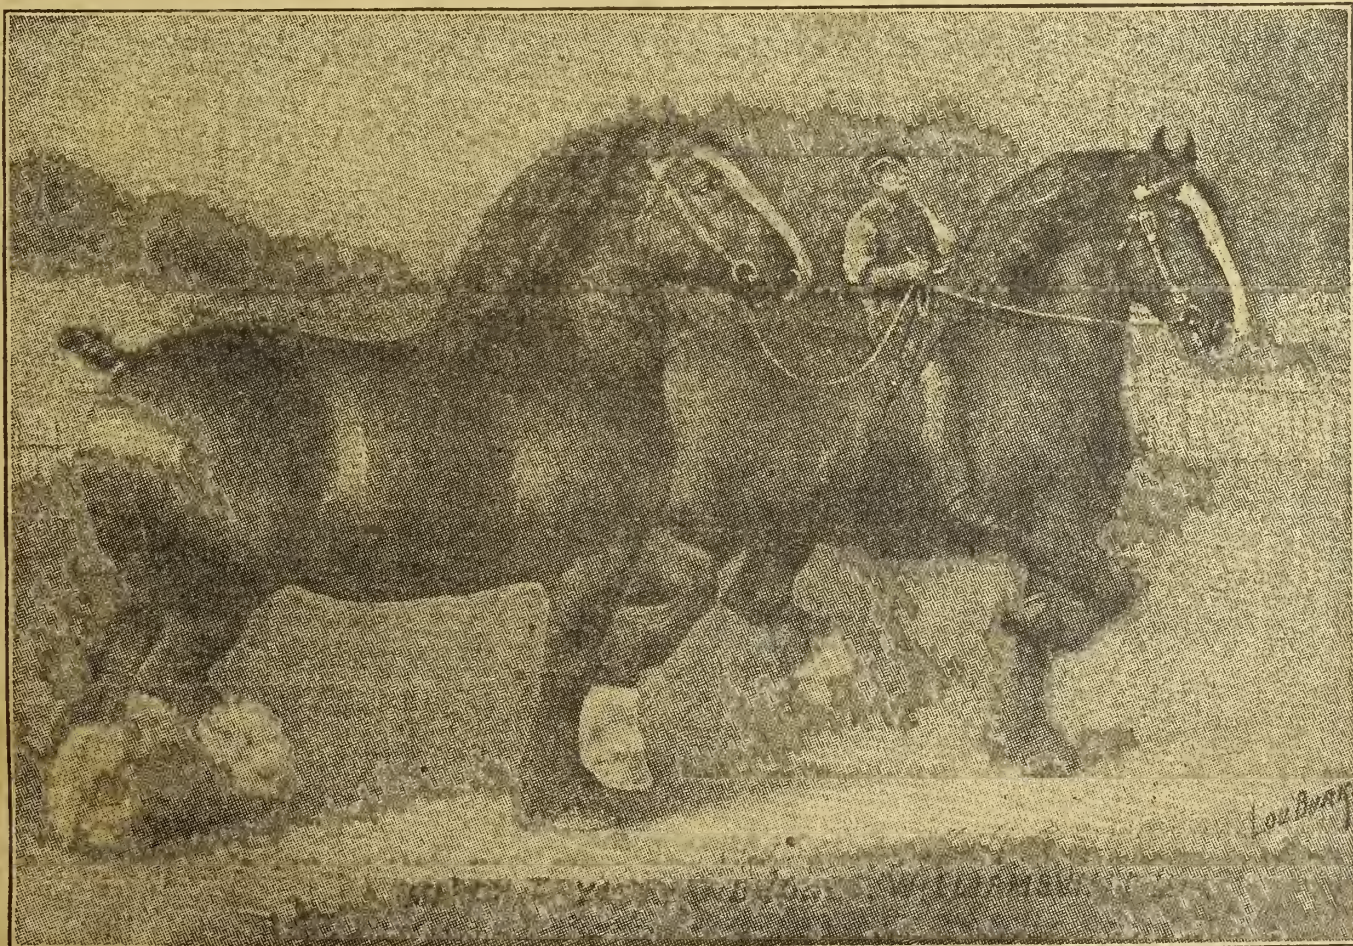

There are still exceptions to the policy of admission, Germany refusing to

admit canned and tinned meats and cattle on the hoof; but the admission of bacon and dressed meat is a most important step in the right direction and it is hoped that other concessions will follow. The new agreement will remain in force one year from July 1 next. During that period, Secretary Root intends to negotiate a reciprocity treaty with Germany which it is hoped will greatly benefit the American producer. In the meantime, the new market thus opened will unquestionably exert a considerable influence in favor of good prices for the products of the American farm.

## AN EXPERIENCE WITH RAPE.

The following communication has been received from the manager of the swine department of the Amana Society of Iowa county, Iowa:

Last spring I seeded about an acre of rape and when it was about ten inches high turned in 125 pigs. They weighed at that time about forty pounds. I turned them on at 3 o'clock one afternoon and left them there about an hour. The next day I did the same thing. The third day I discovered one pig dying. I then considered it advisable to make a close examination, and found that the pigs were all badly blistered behind the ears. The ears were about twice

Prize-winning Shire stallions, imported 1906 by Taylor & Jones, Williamsville, Sangamon Co., Ill. Many prize winners are found in the new importation that arrived March 9th.

as thick as normal, so I went to work and dipped them four times. If I had not done this I believe I would have lost every one of them. The black and red pigs came through in good shape, though the effect of the blistering was more apparent on the white hogs. I have read that rape is apt to do this, but my experience certainly confirms rumors relating to that matter.

We have had a good deal to say about rape during the last few years, but have from time to time called the attention of our readers to the fact that in some instances hogs are apt to be blistered by running in wet rape. The singular thing about it is that one may pasture hogs on rape for several years and not have a single one blistered, and then again this trouble is apt to occur when it is least expected.

We have in mind an instance where in 1906 a bunch of 150 hogs had access to a four-acre field all summer and fall, and upon inquiry we found that not a single hog had been blistered. Of course these pigs also had access to other pastures, though they spent a good deal of time on the rape. It is a very good plan under any circumstances to shut hogs out of rape patches in wet weather, and especially during showery weather when the sun comes out hot between showers.

### GAIN ON HOGS IN STEER FEEDING LOT.

The following communication has been received from a Nebraska subscriber, W. S. Arnold:

I wish you would tell me what would be the probable gain made on hogs running after steers when the steers are consuming from 22 to 24 pounds per head daily. In other words, what would be the gain made on hogs from 100 bushels of corn fed to steers providing, of course, the hogs are given nothing in addition to what they pick up around the yards.

Professor Mumford, of the Illinois Experiment Station, discusses this subject in his recent book on "Beef Production." At that station a car load of two-year-old Short-horn steers were fed from November until June, that is through a period of six months. Their ration consisted of broken ear corn and clover hay. During the period each steer made a gain of 386 pounds. Just enough hogs were used in the yard to consume the waste and it was found at the end of the experiment that for every 386 pounds of gain made on a steer the hogs made a gain of seventy-four pounds.

Every bushel of corn in this instance produced 6.69 pounds of beef and 1.29 pounds of pork.

In another experiment at the Illinois station it was found that ten shoats were about the right number to follow twenty-five steer calves and in still another, twenty-one hogs made good gains after thirty-six steers. When hogs followed steers that were fed whole corn and clover hay, a gain of 3.78 pounds was made on hogs for each 100 pounds of shell corn used, though when ground corn was fed to the steers, the hogs only gained six tenths of one pound for each 100 pounds of meal fed to the steers. From this it will be seen that the gain on hogs that follow meal fed steers is exceedingly small and no doubt it is impractical to feed hogs in this way without giving them some additional grain.

To show the variation in the gain made by hogs following steers, we probably cannot do better than to insert here a table given in Professor Mumford's book which contains the results obtained in ten different experiments at the Illinois station.

Lot No.	Form in which corn was fed.	Pigs per steer.	Lbs. pork per steer.	Pork made per cwt. of corn fed steers, lbs.	Percentage of gain on hogs from corn fed steers, per cent.
1	Silage & corn meal	0.10	6.30	.19	.94
2	Ear corn	0.53	62.60	1.68	9.70
3	Ear corn without nitrogenous concentrates	0.53	74.13	1.89	14.05
4	Corn meal - *	0.27	20.66	.67	3.00
5	Corn meal (hay chaffed)	0.27	20.02	.65	2.86
6	Corn & cob meal	0.27	18.00	.46	2.60
7	Corn & cob meal (hay chaffed)	0.27	24.00	.63	3.34
8	Shock & ear corn	0.60	73.50	1.81	12.72
9	Shelled corn (mud lot)	0.70	85.80	2.79	12.86
10	Shelled corn	0.70	111.50	3.61	16.67

By examination of the column entitled "Pigs per Steer" it will be found that the number of hogs for every ten steers varies from one to seven and that the gains made on the hogs from 100 pounds of corn fed steers varies from .19 of a

pound to 3.61 pounds. We therefore conclude that as the results vary so much as applied to the gain made on hogs and as to the number of hogs that should follow a given number of steers, it must be largely left to the man who is doing the feeding to determine how many

hogs should follow his steers and whether or not they require grain in addition to what they pick up around the yard. Generally speaking, unless one has but few hogs and is feeding steers a long period, it is advisable to give the hogs some grain in addition.

## LAWS PASSED BY THE RECENT GENERAL ASSEMBLY OF IOWA.

No general assembly which ever convened in the state of Iowa passed a larger number of important bills than the Thirty-second General Assembly, which recently adjourned. Some of the laws enacted have been the subject of bitter factional debate, and it is too soon to predict just how they will affect the welfare of the commonwealth.

Among the far-reaching general laws passed were measures prohibiting the giving of free passes; reducing passenger fares to two cents a mile on first-class railroads, and providing for statewide primaries for the nomination of candidates for office.

One of the important measures defeated was the bill providing for a state board of control for educational institutions. Other measures of special interest to farmers were the following:

Appropriation of \$75,000 for a swine barn with show ring upon the state fair grounds.

Appropriation not to exceed \$7,500 annually for experiments in animal breeding and feeding.

Appropriation of \$5,875 to reimburse trustees for funds advanced to purchase a tract of land as an addition to the state fair grounds.

Appropriations for the Iowa State College of Agriculture and the Mechanic Arts are as follows:

For agricultural extension work, annually	\$27,000
For support fund, annually	20,000
For catalogs, annually	600
For equipment of college department	10,000
For constructing heating tunnel system, new boilers, etc.	60,000
For improvement of water system	10,000
For purchase of pure-bred stock	5,000
For walks and grading	5,000
Furniture and fixtures for new hall of agriculture	10,000
For remodeling and engineering hall for structural and hydraulic laboratory	7,000
For machine shop	16,000
For support fund, annually	135,000
For support of the experiment station, annually	25,000
For the support of the engineering department station	3,500
For the purchase of books and periodicals	2,400
For good roads experimentation	5,000

Prohibiting grain combines, trusts or pools by dealers or elevators.

Defining bucket shops and bucket shopping, making it a crime to maintain and operate same.

Relating to joint freight rates over two

or more connecting lines of railway between points within the state.

For the better protection of farm lands from the infection of foul seeds and to require railroad corporations to cut and burn or otherwise destroy certain noxious weeds growing on their right of way.

Requiring railroad companies to construct fences along their right of way subject to approval by fence viewers.

Providing for scales and the weighing of commodities transported in car load lots, and furnishing certificates of weight by common carriers.

Relating to cattle guards at private crossings of railways.

To pay bounty of ten cents for destruction of pocket gophers.

Relating to the purchase of land for county fair societies, giving boards of supervisors power to purchase and maintain.

Providing for the place where ditches and drains shall be located; how appeals shall be tried in appellate courts; for the employment of counsel to represent the drainage district in appellate courts; for the crossing of railroad rights of way; for building of culverts and bridges at the place of crossing and payment of cost thereof; for the assessment of benefits.

Relative to the registration and publication of pedigrees.

Extending exemption of beet sugar factories from taxation until 1917.

Prohibiting fraud in the sale of agricultural seeds, concentrated commercial feeding stuffs and the materials from which they are manufactured; defining concentrated commercial feeding-stuffs and what shall constitute purity in various kinds of seeds; prohibiting the adulteration, and providing for the correct weighing and marking of agricultural seeds and concentrated commercial feeding-stuffs; and providing for the collection of samples, analyses of the same, vesting enforcement in the state food and dairy commissioner.

Relating to the state veterinary surgeon, fixing salary and providing for an office in state house.

To encourage propagation of Mongolian Ring Neck, English and Chinese pheasants and to prohibit the killing thereof.

To require a stamp or label on every ball of binder twine sold, exposed or offered for sale within the state.

### SOME ALFALFA INQUIRIES.

The following communication has been received from one of our subscribers, Mr. O. M. C. Branford:

I would like to get some information as to seeding and raising alfalfa. I am going to seed about four acres of alfalfa this season, but do not know whether to seed in the spring or fall. The ground is well drained and has been seeded in clover for three years and has had two coats of manure during that time. It was plowed last fall, so it can be worked into an ideal seed bed with very little weeds to bother. Would it be best to have a nurse crop, or not, if seeded in the spring? Will it produce any hay the first year it is seeded in the spring? If not, would it not be just as wise to sow some kind of grain in the spring and plow the ground and seed in alfalfa after harvest so as to make use of the ground this season? Please give all the information possible concerning the difficulties in getting a stand and how to overcome them.

There is more than one way of getting a stand of alfalfa, consequently it is not possible to lay down the exact law which, if followed, will insure success. As the land in question was plowed last fall and as it is free from weeds, we believe that in this instance it should be seeded in the spring. As soon as the soil is dry enough to work without puddling, harrow down the seed bed so as to make conditions favorable to weed growth. Let the land remain in that condition for two or three weeks until the spring grain is in and then thoroughly disturb all weeds either with a disk or with a harrow. When this is done, sow the seed at the rate of about twenty pounds per acre and thoroughly harrow it in. Do not be afraid of covering the seed too much so long as you use an implement that is no heavier

than the harrow. If weather conditions are at all favorable the crop will soon come up and it may hold its own against weeds. However, if the weeds seem to be getting a start, do not hesitate to cut weeds, alfalfa and all back during the first season with the mower. Alfalfa will take root under such treatment and the probabilities are that the second year it will have things its own way.

Of course there are instances where men have succeeded quite well by sowing the alfalfa early in the spring along with oats or barley. Naturally, barley is better because it does not grow so rank in the straw and is therefore not so liable to choke out the alfalfa. The only danger is that when the cereal crop is cut the hot weather is sometimes a little hard on alfalfa.

Then of course there remains the plan of sowing a cereal crop early in the spring, plowing the land as soon as it is removed and fitting the seed bed so that the alfalfa can be seeded anywhere from the first to the tenth of August. The objection to this plan is that there is not sufficient moisture every year to start the plants early enough so that there is enough growth before the ground freezes. This condition prevailed last year in many parts of the corn-belt, and men who did not get their alfalfa in about the first of August are very much discouraged over their stand, because after the middle of August there was insufficient moisture to germinate the crop until on into September.

We have given the ordinary methods of putting in a crop of alfalfa and leave

it to this subscriber and others who are interested in the subject to choose which one fits their conditions. We regret to say that there is risk enough that one will lose his labor and his seed no matter which plan is tried, and yet where the crop thrives it is well worth the effort required to obtain a good stand.

### ONE WORD MORE ON THE SEED BED FOR CORN.

The Homestead has many times in the past called attention to the fact that the experiment stations have, in their agitation about the seed corn question, neglected largely, up to this time, the relation of a seed bed to a large yield. Not that there has been any wilful neglect, but rather that the seed question has seemed so important as to overshadow other factors that are essential to the good crop.

We claim that it is possible to nearly double the yield by properly preparing the seed bed as compared with the practice of putting in the corn crop by old-fashioned methods.

The bulk of the corn that will be planted in 1907 in the central West will be put in on old stalk ground and we first give attention to the preparation of the seed bed under these conditions. Corn stalk ground should always be disked or thoroughly harrowed before plowed. This pays well, if for no other reason than to put the surface in such shape that the ground is level after it is plowed. If you put the plow in on old stalk ground the chances are that you will cut two narrow furrows and then a very wide one, in order to turn out the old corn roots. This wide furrow always remains prominent, it being almost impossible to work it down, so as to make the surface level. Then, of course, disking a surface before plowing does away with the turning under of a harsh crust.

Even good farmers differ in their opinion as to how much labor should be put on the field after it is plowed, but our opinion is that it pays well to harrow three or possibly four times. If there is time for the weeds to start between the period of plowing and the date of planting it will pay well to put on the disk and destroy them and then, of course, the disk must be followed by the harrow, in order to properly fit the ground for planting.

In the case of fall plowed land we strongly favor the practice of double disking, and by double disking we mean lapping half the disk at each time, in order to prevent ridging the soil. After that, most of the labor may be done with the harrow, but let it be remembered that time spent on such ground with the harrow will greatly add to the yield. There is a temptation, of course, to prepare fall plowed ground somewhat roughly, with the expectation of doing considerable work on the surface before the corn comes up. Generally speaking, this is a mistake, because in most instances there is not time to do much work on a soil after it is planted. Wet weather and the putting in of the late fields combined, usually keep a man from carrying out his plans in this regard.

Then there is the sod ground, either fall or spring plowed. While much labor is essential in preparing stalk ground and while it will pay well to put considerable time on fall plowed land, yet it is the sod that after all should receive the most labor. The thing to be aimed at is to put plenty of work on the surface so that the furrows are thoroughly compacted with the lower soil. We would rather delay planting a week or even ten days on sod ground than to rush it in before the seed bed is thoroughly worked down. Sod is always a fast soil, and we have always figured that corn will make up about two weeks on this kind of land as compared with corn stalk or old stubble ground.

There are those who find fault with our recommendations in the matter of preparing seed bed on the ground that too much labor is involved. We claim that as much corn can be raised on fifty acres by following these methods as can be raised on seventy acres where the surface is worked over once or twice and the corn is planted. This being true, it is certainly the part of wisdom to leave down a little more grass land and grow the same number of bushels on the smaller acreage.

## Farm Furrows

Turned by a Practical Farmer.

Some people waste the best part of the day in getting started

One of the hardest things on earth is to see the good points in persons we dislike.

The desire to own all the adjoining land in every direction has caused many a heart-ache and back-ache.

The examination of the ground around a dry weed stalk will prove that weeds do not believe in race suicide.

Some men try to make as much noise in dropping a nickel in the collection box on Sunday as a dollar would make.

Men who hire lawyers and fight over differences involving a few cents generally have minds of the thirty-cent caliber.

Don't make life miserable for the family another season by trying to grow poultry and garden truck on the same piece of land. One fence will fence in the garden and fence out the poultry.

Congressman J. Adam Bede, of Minnesota, says that modern farm machinery so lightens labor on the farm that the farmers in his locality are building gymnasiums in which their hired men exercise.

Nearly every man knows a great deal about how the affairs of the county or state should be conducted, but when it comes to filling a petty little township office they can't even put a motion to adjourn.

With the Minnesota legislature working on an anti-treating law and an Indiana judge stoutly claiming that all liquor licenses are illegal the liquor dealer must think that the people are going clean daffy for sure.

As a rule state legislatures are made up of keen, bright men, but occasionally you will find one who has as little grasp of public question as an infant in arms. It's great to hear these chaps tell how to run educational institutions.

After trying about every imaginable kind and variety of milk strainers without ever having fallen in love with any one of them I have about concluded to return to the good old-fashioned plan of several thicknesses of cheese-cloth, using clean cloth each milking.

At the price of leather these days no kind of harness is cheap. A poorly made-up article sells now for about the same price that a well made article did a few years ago. There are some things which I believe the best is the cheapest in the long run, and harness is one of these.

"A place for everything and everything in its place" is the only rule on the farm by which tools and small implements can be found when wanted. I have known men to spend an hour of a very busy day looking for some misplaced tool necessary to repair machinery.

Chemical analyses of foods mean little to the average man. It may be that a man is never too old to learn, nevertheless it is a pretty difficult undertaking to teach an old horse new tricks. In the editing of bulletins for farm reading a good many investigators, if they could be placed in our shoes, would use more plain Anglo-Saxon than they do. The conclusion or summary in many bulletins is a good idea.

The human as an individual will tolerate coarseness, but humans as a body, rarely ever. At a gentlemen's convention held recently one speaker started out in a vulgar vein, thinking that to be the popular thing. In the midst of his talk a member arose to a point of order and

# You Get More Harvest Profits If Harvest Finds You Ready

**T**O get all the profits possible out of your harvest this year—that is a plain business proposition with you.

It needs no argument to prove that you can not be sure of all the harvest returns—no matter how favorable the outlook—unless you have made full and effective preparations before hand.

A quick harvest—an easy harvest free from breakdowns and delays due to inefficient machines—is the harvest that yields every cent of its value to you.

The vital point then is your harvesting machines. You can not afford to take chances on it. A mistake in this matter means loss of golden hours in the field, and profit-eating expenses, to say nothing of the worry.

You can not decide this question wisely when the harvest rush is on. This is one part of your preparation that you can make now, and that it pays to make now.

The test of time is one of the best guides to your selection. And when you think of harvesting machines that have proved their efficiency year after year for a generation, what names are brought at once to mind?

**Champion, McCormick, Osborne, Deering, Milwaukee, Plano.**

There must be a reason why these six machines have become familiar the world over—wherever harvesting is done.

It means that they have withstood all the tests of all conditions of harvest fields everywhere.

It means not only that they were built on right principles at the first, but that they have steadily led in improvements from year to year, thus holding the place they have established as the standard.

But world-wide reputation—much as it means—is not the only reason for absolute confidence in this line.

Each machine stands on its present merits, because it is built under the most favorable conditions.

The International Harvester Company is able to demand and obtain the very best materials of every kind and the highest mechanical skill—everything that goes to make the perfect machine.

To erect and maintain experimental shops and laboratories and to employ the best specialists to work out every principle and detail—these things would not come within the reach of the ordinary manufacturer. But the International Harvester Company can and does concentrate the

excellence of all its splendid equipment in these machines.

By owning and operating its own coal and iron mines, its own smelters and steel mills, and its own timber and saw mills, the International Harvester Company is enabled to select the best wood and steel that forests and mines afford.

And in addition it can and does employ the best labor.

With such advantages of increased resources, nothing but the best of material need be accepted. And it is easy to see how machines can be improved in a degree not attainable in any other way—how such rigid tests as these machines are subjected to, can be insisted on—why no machine ever leaves the works until the best qualified experts have pronounced it perfect.

All this care in the selection of materials—all the skill of labor—all the thoroughness of inspection and test—and all the perfection which these things mean and bring about goes into your machine.

Isn't it worth while to consider who gets the benefit in the end—what this concentrated effort on your machine would mean to you in the critical time of your harvest?

Isn't it worth your while to consider whether you will not be the gainer in a large degree by preparing for harvest or haying time with a machine that you know?

Harvest time is not the time to try something you are not sure of. You want all the guarantee of steady, reliable operation that you can obtain.

Manufacturers can afford to experiment, but you can not.

You want a machine that has been proved by time—that has been proved by use under all conditions—that has been proved by your own neighbors—and that is made under conditions that assure you that it is the best within the manufacturing possibilities.

And if repairs ever have to be made, you want to be sure that you can get them at once, and that the parts will fit. This is another special advantage of these machines—repairs are always right at hand, for International local agents everywhere have them in stock.

Harvest economy and efficiency not only call for good machines but good twine as well.

International Harvester Company binder twine is made from high-grade pure sisal and manila fibers—the best raw materials that can be procured. The Champion, Deering, McCormick, Milwaukee, Osborne, Plano and International binder twine is sold in the following grades: Sisal, standard, manila and pure manila.

Call on the International agent and get a catalog, while you have plenty of time to study it. If you don't know an International agent write us and we will give you the name of the one nearest you.

**International Harvester Company of America, Chicago, U. S. A.**

(INCORPORATED)

**International Line:**—Binders, Reapers, Headers, Header Binders, Corn Binders, Corn Shocks, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Bales, Feed Grinders, Knife Grinders, Cream Separators, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, Bettendorf Wagons and Binder Twine.

said: "Mr. Chairman, I desire to interrupt the speaker long enough to remove my dog from the hall. This is no place for him." That ended the vulgarity.

With the coming of soft roads again the shoes may be removed from both draft and driving horses. I imagine after a horse has worn a heavy pair of shoes all winter his limbs feel like those

of man where the heavy winter boots are replaced by light shoes.

Some of the railroads are taking off their fast through trains and adopting slower schedules for the regular service. This is claimed to be the reactionary effect of the two-cent rate. Railway management is naturally a perplexing study to the onlooker and we heard of a wag

lately who said he would have thought that more trains and faster time would earn money faster. His second thought was that perhaps the traveling public was being exterminated too rapidly.

I often think that the man who invented the disk cultivator should have a monument erected to his memory. I wouldn't like to farm without one.

# THE HOMESTEAD

A Practical Journal for the Farmer, Stockman, Fruit Grower, Poultryman, Gardener and Housekeeper.

BY JAMES M. PIERCE.

JAMES ATKINSON, Editor in Chief.

ESTABLISHED IN 1855.

Entered at Des Moines Postoffice as second class matter

PUBLISHED EVERY THURSDAY.

**SUBSCRIPTION RATES**—Single subscription, \$1 a year; ten copies one year, \$10, and an extra copy to get up of club. In clubs of one hundred or more, 25 cents a year. Single subscription three years in advance, \$2; five years in advance, \$3; ten years in advance, \$5. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send the old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

THE HOMESTEAD COMPANY,  
Des Moines, Iowa.

## CURING BEEF IN DRIED FORM.

One of our Kansas subscribers, Mr. Jerry Gibson, sends the following communication:

I would like to learn through the columns of your paper how to make dried beef. This may seem a simple proposition, perhaps, to you, but to one who has never had experience in doing it, it is not so simple after all.

Possibly we cannot do better, in answer to this inquiry, than give the method that was submitted a few years ago by Prof. Andrew Boss, of the Minnesota station to the department of agriculture, Washington, D. C. It was afterwards embodied in a publication emanating from that department.

According to Professor Boss the round is commonly used for dried beef, the inside of the thigh being considered the choicest piece, as it is slightly more tender than the outside of the round. The round should be cut lengthwise of the grain of the meat in preparing for dried beef, so that the muscle fibers may be cut crosswise when the dried beef is sliced for table use. A tight jar or cask is necessary for curing. The process is as follows: To each 100 pounds of meat weigh out five pounds of salt, three pounds of granulated sugar, and two ounces of saltpeter; mix thoroughly together. Rub the meat on all surfaces with a third of the mixture and pack it in the jar as tightly as possible. Allow it to remain three days, when it should be removed and rubbed again with another third of the mixture. In re-packing put at the bottom the pieces that were on top the first time. Let stand for three days, when they should be removed and rubbed with the remaining third of the mixture and allowed to stand for three days more. The meat is then ready to be removed from the pickle. The liquid forming in the jars should not be removed, but the meat should be re-packed in the liquid each time. After being removed from the pickle the meat should be smoked and hung in a dry attic or near the kitchen fire where the water will evaporate from it. It may be used at any time after smoking, although

the longer it hangs in the dry atmosphere the drier it will get. The drier the climate, in general, the more easily meats can be dried. In arid regions good dried meat can be made by exposing it fresh to the air, with protection from flies.

## THE PASSING OF THE GUATEMALAN ANT.

The curtain is finally rung down upon the Guatemalan ant, and it is formally discharged from the government service in the following sentence from Secretary Wilson's annual report: "Efforts to successfully over-winter in Texas as the kelep or Guatemalan ant, enemy of the cotton boll weevil, have failed. It is possible that this species may have some economic value in some of our tropical or sub-tropical possessions, where the climate may be more suitable than in Texas."

While it was with us, the ant—the public will always think of it as an ant, rather than a "kelep"—added to the gaiety of nations. Its first appearance in the Sunday newspaper showed a ferocious insect, so utterly out of proportion in size to the little boll weevil down in the corner that it had to be put in on the bias, and took up the best of the page. Then the newspapers poked fun at the ant.

The trouble seems to have been pernicious activity. The boll weevil destroyer discovered the honey in the cotton plant, and found it even more attractive than boll weevils. The crop was threatened. Alarmed planters turned to the courts for a possible injunction. In view of all this, it is perhaps fortunate that the kelep will not over-winter in Texas.

And now the problem of the agricultural department, which is nothing if not resourceful, is to find a weevil-resisting cotton plant. The National Geographic Society reports such a cotton grown in Guatemala.

## The Value of Listed Corn.

To the Editor of The Homestead:

When listing first came in vogue I fell in love with the system, sold my check-rower planter, burned the bridges behind me and bought a lister outfit. I raised some good crops of corn this way, and generally with less labor than with check-rowing. I also had some partial failures on account of washing out. I have now quit listing entirely, principally on account of the damage to the ground by the heavy rains, which do so much damage by washing away the cream of the soil. I still think listing the cheapest and best way of raising corn on land which will not wash and still has sufficient slope to carry the water away, and prevent drowning of the crop, but on our rolling prairie I believe it is wasteful and extravagant because of the great loss of surface soil in which rests about all its fertility.

There is altogether too little rotation of crops here in the West. I know of land that has been continuously cropped to corn for thirty years. It is a wonder that it raises anything. It doesn't raise much. My plan now is not to grow corn more than two or three years in succession on the same

## I used Dipolene for Scab in pigs

Writes A. J. Gibson, R. F. D. No. 3, Marshalltown, Iowa: "I dipped them twice and they are doing fine. It's good enough for me."

"My sheep were full of ticks but Dipolene cleared them out entirely. My hogs were scurvy. I dipped them and since I never had hogs do better."—W. H. Hunt, Sterling, Ill.

"For chicken lice Dipolene is the best thing I ever saw," writes Carl E. Sheldon, Mazeppa, Minn.

"My neighbors' sows and pigs were dying off when we dipped those left in Dipolene. After that not another one died, so we think Dipolene all right."—Norban Worth, Marshalltown, Iowa.

We could go on and give you hundreds more such experiences which are absolute proof that Dipolene does the work, but we have even a better way.

We want you to know from your own experience that it cures Scab, Mange, Eczema, etc., kills Lice, Ticks, Mites, Fleas; prevents all contagious diseases; that it is non-poisonous and perfectly harmless—the best dip made. Therefore we make you this offer. Go to your dealer—ask him for a can of Dipolene on our

Thirty Days Free Trial Plan

Don't pay a cent for it—take it and test it according to instructions. If it does not do what we claim take it back. You're nothing

## DIPOLENE

THE ONE MINUTE STOCK DIP

out—if it does you'll be glad to pay its low cost. If your implement, hardware dealer or druggist does not handle it, send to us direct—we pay freight charges. Write for our Budget of Real Letters from Farmers—free. MARSHALL OIL CO., Dept. D7, Marshalltown, Ia.

## "A Kalamazoo Direct to You"

End your stove worries! Get a Kalamazoo Stove or Range on a 360 DAYS' APPROVAL TEST

and a \$20,000 bank guaranty on durability, convenience and economy of fuel. You cannot get a better at any price, but you save from \$5 to \$40 by buying from the actual manufacturers at

Lowest Factory Prices—We Pay the Freight

At least get our prices and compare our offer. Send postal for catalogue No. 165.

Kalamazoo Stove Co., Mfgs., Kalamazoo, Michigan.

Our patent oven thermometer makes baking and roasting easy.

## PORTER'S Hay Carrier

"Meadow King"

The carrier that represents the limit of all that is up-to-date in hay carrier construction, design, finish and manner in which it does its work. The carrier with wide open mouth and with swinging fork pulley. With this carrier you can fill the mow closer to the roof of the barn than with any other hay carrier. The throat of the carrier has a very large opening, which permits the pulley to approach with a swinging load and the load can swing in either direction when loaded in the carrier. The carrier can be swiveled either on or off the trip-lock, or can be reversed by pulling the rope directly through the carrier.

The lock is perfect. Write today for free, illustrated catalogue, explaining this carrier.

J. E. PORTER COMPANY, OTTAWA, ILLINOIS

ground, then sow oats and seed to clover and grass. This restores fertility and in two or three years fall plow and surface plant to corn. I believe by this plan soil fertility may be conserved indefinitely.

Edwin Snyder.

Jefferson county, Kan.

## Value of Grass as Roughage.

To the Editor of The Homestead:

I have had considerable experience in feeding stock through the winter. I have handled all kinds of feed except alfalfa and have never found anything to equal good, bright, wild hay. I am so partial to it that I believe it is the ideal feed for roughness.

Two winters, on account of the scarcity of other roughness, I was compelled to feed corn fodder and I was not particular in taking off all the nubbins. Three winters I fed nothing but flax straw. I have left stock run in the stalk fields and fed corn fodder in the yard and flax straw in the shed; I have fed clover, timothy, millet and oat straw, but of all fodders I like the red kafir corn the best. It grows finer stalks than the white and stock come nearer "cleaning it up" than any of the other fodders. It whets up their appetites and a head of the seed is as good as an ear of corn. It is impossible to raise it here, but in Kansas it is par excellence.

In feeding stock through our long winter the question of economy cuts quite a figure. Give an animal an armful of prairie hay and he has an armful of feed. Feed clover, millet or timothy and at least one-fourth has to be thrown out of the manger and about half of the corn fodder is waste.

The great amount of prairie hay consumed by stock and the small per cent wasted is not its only economic feature. It is easier handled; it takes about half the labor to procure a given amount as compared with other feeds and is the only roughness that does not take labor and capital to grow.

Grass is the poor man's friend. Its life germ is eternal. A frost, a drouth may kill the blades above the surface, but after a dash of rain warmed by the kindly sunshine it springs again

into life to gladden man. Nature has scattered it with a lavish hand over every hill and vale. It springs up at the earliest hint of spring, feeding his stock through the summer months and falls before his sickle as a free will offering for the same when winter holds the world in its grasp. In his childhood it lovingly caressed his feet, and when they have grown weary climbing up the hill of life and he lies down by the wayside in his long rest it creeps over the unsightly mound and kindly blots it from sight.

Geo. C. Lloyd.

Kittson county, Minn.

April 9th was the thirtieth anniversary of the day Mr. Chas. N. Page became affiliated with the history of the Iowa Seed Company. As a small boy he was given a position in Fuller's Seed Store, which became in a few years' time the Iowa Seed Company. From a small store on West Third street, Des Moines, Iowa, this firm have grown into one of the leading mail order seed houses of

this country. They publish annually about 800,000 catalogs, and have customers in all parts of the world. Thirty years ago they received less than 500 orders per year, while during the busy season now there are sometimes 5,000 letters received in a single day's mail. Mr. Page's untiring efforts have been given to the upbuilding of this business, and he is to be congratulated upon his success.

## No-Tar Roofing

Defies Time, Water, Sparks, Cinders, Wind

"No-Tar" Roofing has a surface as hard as flint—it is flint! Can't catch fire from sparks or cinders. It's as flexible as rubber—and absolutely waterproof. It's tougher than leather. Coats less and lasts longer than shingles, iron or steel. Won't run in the hot sun. The building that has a "No-Tar" Roof protection will last longest.

Accepted by all Fire Insurance Companies, who charge 25 per cent less for insuring buildings protected by "No-Tar" Roofing than for buildings with shingle roofs.

**For Store Buildings and Factories** "No-Tar" Roofing is far more durable and satisfactory for flat or steep roofs than tin or gravel roofing. Will not rot, rust or run.

**For Barns and Outbuildings** "No-Tar" Roofing is made in various weights, for all sorts of buildings. Nothing better or cheaper for stables, houses, outbuildings, etc. All joints water tight. "No-Tar" Roofing keeps stock and poultry safe and warm in coldest weather. Quick and easy to lay. Exceedingly popular among farmers, stock raisers and poultrymen.

**For Houses** "No-Tar" Roofing will add immensely to the appearance of your residence. Use it on your new house or cover the old, leaky shingle roof with "No-Tar" Roofing and avoid disaster from water or fire. "No-Tar" Roofing is a non-conductor of heat or cold. Keeps your house warm in the winter and cool in the summer. Try it on your porch or kitchen.

**Free Samples to Test** When we send you the Free Sample of "No-Tar" Roofing we will tell you ten ways to test it and prove its superiority to any other roofing.

**Free Roof Book** This book tells "How to Do Your Own Roofing." Tells how to make Valleys, Gutters, Flashings, etc. How to Measure a Roof. Explains the whole roofing proposition. We send the book FREE, postpaid, on request. Get "No-Tar" Roofing from your local dealer. Special nails and cement FREE.

**The Heppes Co., 2483 Fillmore Street, Chicago**

Dealers, Attention—Write for FREE PLAN, by which you can quickly build up a profitable Roofing Department.

Wall Flashing—Roof Book, page 18, tells how to make it.

Over Old Shingles—Roof Book, page 5, makes it easy.

Chimney Flashing—Roof Book, page 18, tells how to do it.

## HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

### Device for Sorting Hogs.

To the Editor of The Homestead:

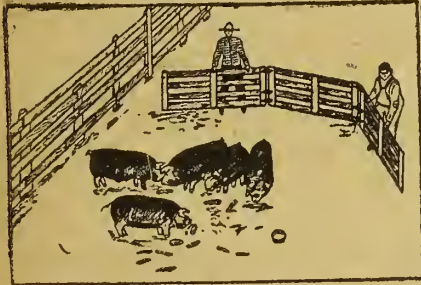

Every year I crate a good many hogs to ship to my customers. We used to have a great deal of trouble in getting the hog we wanted from the feeding lots into the smaller pens and from there into the crate. Those who have to follow this method in sorting out their hogs know just what an aggravation it is. Often it is necessary to drive the herd around the yard several times until, perhaps, some one of the number is overheated or injured. That was our experience, at least, until we struck what we consider

THE HOG HURDLE.

a very happy idea. Now instead of having a lot of trouble when it comes to crating a hog, we use a device consisting of three short gates, hinged together, as shown in the sketch. We use strong door hinges and three of them to each joint. The hinges should be secured onto the cleats rather than onto the panels of the sections. This will then allow each section to fold over onto the center piece when not in use.

As will be seen by the drawing, one section is four feet long while the other two are six feet long. In folding the sections together the short one is folded in first. This allows the long one to lay next to it. The total length will be seen to be sixteen feet. At first this may seem a little short, but we have

SURROUNDING A BUNCH.

tried different lengths and find this to be the most handy and convenient of any. It is often necessary to make

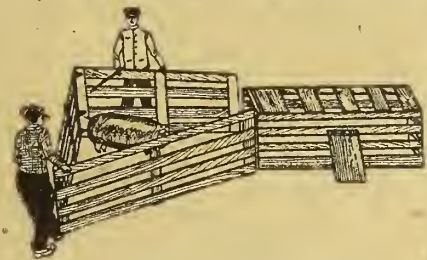

quick moves in sorting hogs, so that the three gates must not be too heavy and unwieldy to handle.

The panels may be either four or six-inch boards. However, we find four-inch panels plenty strong enough and it reduces the weight of the whole device considerably. The two lower panels are four inches apart, above that they are six inches.

When we want to crate a hog we pen a bunch up in one of the smaller lots and with one of us at each end of the sorting device we approach the bunch which contains the hog we wish to crate. By moving towards them slowly they will not be frightened, and often we can work in among the herd and get our gates thrown around the hog we are after almost before he knows it.

Sometimes we can use the fence as a fourth side to advantage. In such cases we may have several hogs enclosed and this allows more room to work. As soon as we have enclosed the hog we are after with the gates one of us goes after the crate, which we bring right into the yard and place the open end of it at the gap which we make between the two ends of the gates. A few moments more and we have accomplished our end.

Regarding the cost of this device which we call a sorting gate, we would say that our experience is that it is comparatively nothing compared with the work and aggravation that it saves. It only requires a few hours of time to set

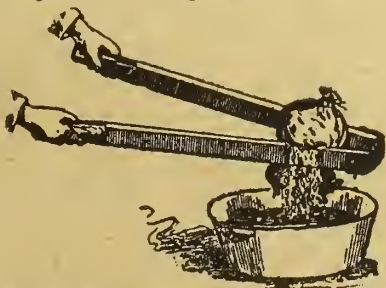

PUTTING HOG IN CRATE.

it up and it will last for years. It may be used in other ways. We find it very handy to pen a litter of pigs where we wish to get them out on grass in the barnyard. We have used this device for a good many years and would not know how to get along without it.

A Subscriber.

Those who have on hand a stock of empty honey-comb may be interested in the following taken from Gleanings in Bee Culture. "There is a little kink I practice in rendering old and black combs. I used the Swiss extractor; and after all the wax had run out possible from the extractor the refuse was dumped, steaming hot, into a burlap sack, the sack being tied up close to the slumgum. The bag was then held by

one person, and another applied the pressure. While under pressure, just about as much wax was squeezed out as came from the extractor, and the pressure was obtained very cheaply. Two sticks were nailed together at one end by a leather hinge, the other ends used as handles, when a mighty pressure could be brought to bear on the hot refuse. The one who held the sack kept twisting, and the squeezer kept squeezing, so to speak."

You can sell your farm by placing a classified advertisement in The Homestead. The best medium published for advertising lands, live stock, poultry, pets, farm machinery, implements, musical instruments, vehicles or other property wanted by farmers. The price of an advertisement in our classified department is only five cents a word each insertion, no single insertion being accepted for less than \$1.20, even if less than twenty-four words. Every number, initial letter and abbreviation, including your name and address, counts one word. Terms, cash with the order. No display type or illustrations admitted in this department. #### Combination Sale of Short-horns.

The combination sale of Short-horn cattle held at Nevada, Iowa, April 11th, under the very efficient management of Mr. Ed R. Silliman, proprietor of Claverhurn herd at Colo, Iowa, was a success. The day was anything but pleasant. The wind blew almost at hurricane speed, and when the sale was about half over it was deemed too dangerous to continue longer under the canvas and the sale was finished out in the cold, with dirt and debris in the air, with the crowd standing around country sale fashion. Col. A. P. Mason did the selling, assisted in the ring by three local helpers. Mr. Silliman's cattle, which had been in charge of Herdsman Geo. Pierce, were the only offering presented in good flesh. His eleven head sold well, condition and breeding considered. The entire offering were well sold. The following figures tell the story. Mr. E. R. Silliman sold eleven females for \$1,121, an average of \$119.18. Messrs. A. J. Graves & Son sold six females for \$442.50, an average of \$73.75, and three bulls for \$275, an average of \$91.66. Mr. C. E. Klump sold eight females for \$583.50, an average of \$74, and two bulls for \$95, an average of \$47.50. Messrs. Wilkining & Shaw sold four bulls for \$155, an average of \$38.75. Mr. Patrick Mulcahy sold two bulls for \$138, an average of \$69. Mr. Sam S. Kooser sold one bull for \$100. The entire number of thirty-seven head sold brought \$2,910, an average on the entire lot of \$78.65. We furnish buyers names only on lots selling at \$100 and upward:

#### WHY RAISE BEANS AND PEAS?

The above question has often been asked. In the past the difficulty of harvesting leguminous crops of this nature has been of the chief objections to the crop. Otherwise these legumes constitute one of the most valuable crops to be grown on the farm. That they are profitable has been proven by farmers in every section of the country. As fertilizers of the soil they have all the valuable characteristics of any legume. They add nitrogen. As a feed for hogs the soy bean is unexcelled. It keeps the pigs growing and puts on finish. This is the experience of those who have fed the soy bean. The cow pea grows rank in the corn field. Aside from these crops the growing of commercial varieties of peas and beans is a great industry in many of the farming states. The profit in this crop is scarcely realized by farmers. The difficulty of caring for such crops is now largely overcome by the use of the Owens Bean and Pea Thrasher. Constructed on most up-to-date lines this thrasher is able to do work rapidly without damaging the beans and peas. A well written booklet on the culture of these crops will be sent for the asking to anyone interested, who will write J. L. Owens Company, Minneapolis, Minn. Mention this paper when you write. See page 12.

#### SETTLERS' RATES TO MINNESOTA, NORTH AND SOUTH DAKOTA AND CANADA.

On every Tuesday during March and April the Iowa Central will place on sale special second class settlers tickets at extremely low rates for benefit of settlers to the Northwest. Call on agents for rates, or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

## How to Know Paint that Will Wear

The wear of paint depends on pure Lead and pure Linseed Oil. Ready-mixed paint containing substitutes will always crack, scale and chip.

Paint that wears best, covers most, looks best and costs least is made of

## CARTER Strictly Pure White Lead

More used than any other brand of lead because practical painters know it is every atom paint. Comes ready to be thinned with pure Linseed Oil and colored to suit your taste. Costs less to apply, and two coats does the work of three coats of other paints. Sold by reliable dealers everywhere.

Booklet, "Pure Paint," sent FREE. Tells how to save money on your paint bill; how to detect impure lead. Shows six beautiful color schemes.

Address Dept. D,  
CARTER WHITE LEAD CO., Chicago, Ill.  
Factories: Chicago—Omaha.

## Care of Brood Mares Near Foaling Time

BY JAS. B. DAVIDSON, ILLINOIS

The season is again approaching when the mares bred in the season of 1906 will have advanced to a period in gestation when they need the best possible care to prepare them for the maternal function. Every mare at breeding time should be in the best of health and in good, thrifty condition, not necessarily fat, but in that state that is indicated by a bright eye, a fine, glossy skin and a spirit that shows life in every move.

Sometimes as spring approaches, mares or, in fact, any kind of horses get in a poor, unthrifty condition caused, perhaps, by lack of care, irregular feeding and dirty, unsuitable food, and it is shown by the staring coat, stocked legs, and lack of life. When such is the case they need attention and it is well for the owner or attendant to look for a cause and seek a remedy.

More horses get out of order from the lack of enough nutritious food than from overfeeding. If the cause is lack of proper food, then the owner should provide something that will build up the system and make bone and muscle, but when the horse is poor, great care should be exercised in changing to a richer or more nourishing ration, and in making the change the animal should be fed very sparingly and two or three bran mash given a week with plenty of salt in them. This will act somewhat as a laxative, but even after this a dose of raw linseed oil, just enough to move the bowels, is very desirable. After this the food should gradually, but slowly, be increased until enough is given above a maintenance ration, to insure a reasonable gain in flesh. I have found that a good ration is ground oats in the morning, ear corn at noon, and boiled oats with some bran and a handful of ground flax, mixed together, fed for the evening meal. A reasonable amount of good, clean hay at each feeding time, but most at night, makes a very desirable combination to produce the desired result in run-down horses. I have never found anything better than ground or boiled flax as a conditioner.

Now, as to the mare that has been bred and is nearing the foaling time. If she has been bred under favorable conditions so much the better, and the produce will most likely be strong and healthy if the mare has been properly cared for and fed.

During the first few months of the gestation period the kind of food used does not make any particular difference, as long as it is clean and wholesome, though a large amount of corn is not a desirable food for breeding stock.

As the period advances it is essential to the best result, generally speaking, that the mare receive a ration rich in protein such as clover and alfalfa. Hay, oats, bran, flaxseed meal and oil-meal cake, or any food good for milk production, excepting, perhaps, cottonseed meal, is good for a pregnant mare

if fed in reasonable quantities. It is desirable to give brood mares plenty of exercise and there is no way this can be done so well as by regular careful work at almost anything that needs to be done on any ordinary farm, but where it is not desirable to work them they should have plenty of outdoor life.

If it be desirable to breed two mares it will often prove very satisfactory to breed one in the spring and the other in the fall, and especially is this true if two pairs are to be bred, and the fall colts can be raised as cheaply as the spring youngsters, and will be found as satisfactory in every way. If the mares foal about October 1st they are likely to be in good condition for it and the colts will be strong and vigorous, and with good care will be in fine condition in the spring and they can be weaned in time to give the mares a chance to be put in good shape for spring work. When grass comes they may be turned out and with half the grain they would require for winter feeding will make rapid growth and will have arrived at a stage in their existence, when they can withstand the attacks of flies with the least possible inconvenience to themselves, when fly-time comes.

When mares that foal in the spring are required for work they ought to foal after corn planting and then with a month's rest and a little feed on the grass they will be in condition to do the light work of haying and harvesting, and with a little care and attention at the right time the colts can be kept as thrifty and will grow as well as if they were running with their dams on pasture. When the mothers are worked they ought to be fed in a box low enough and large enough so the colts can eat with their mothers. This is the easiest way to teach them, and as soon as they begin they should have oats before them when the mares are taken out. Where skim milk is available it will be found a great help to the youngster.

A mare should foal in a good, roomy box-stall that has been thoroughly cleaned and disinfected and the colts navel should be kept saturated with carbolic oil for a few days after it comes; where this is practiced it is generally attended with good results.

The present condition of the horse market warrants a man breeding horses, but let me say, don't expect a mare to carry a colt, nurse a colt, and do the work of a gelding without good care and plenty of food.

In conclusion I would say, breed the mares you have if they be free from hereditary unsoundness. If you have to buy, get good ones, and use the best stallion available of the blood most strongly represented in your mares. Care well for your mares and colts and you will win out.

## THE SUN FURNISHES THE WATER

On the Canadian Pacific irrigated tract in Southern Alberta water is obtained from the Bow River, which draws its supply from the main range of the Rocky Mountains. As the season advances the snow melts higher and higher up in the Rockies, and thus a constant, unfailing supply of water is furnished to the Bow which fills the irrigation ditches during the spring and summer season—at the very time moisture is needed to mature the crops.

Owing to the inexhaustible supply of water coming from the mountains, it is unnecessary to build storage dams or reservoirs. The flow of water in the Bow River has been measured year after year by the Government, and it has been found just what the minimum flow is. The Government does not authorize the building of irrigation works to take more than the minimum flow from the river, so the settler is assured that in the very driest season he will have all the water he cares to use.

Every farmer knows that plenty of moisture on good ground, with a good climate, means a bountiful harvest. On the irrigated lands of the Canadian Pacific in Southern Alberta you will always have plenty of moisture, and as the ground is rich and the climate is the best, crops must be good.

Almost any kind of grain and root crops can be raised. There is a good market at the very door of the settler, and thus every opportunity for money making is to be found on this vast tract.

If you think of changing your location you will make a mistake if you do not investigate this opportunity. You will find nowhere else the chances for making money and the perfect farming conditions that prevail here.

Write us at once, and let us tell you how to take a trip through the finest agricultural country on the American continent, at the lowest possible cost, and how to obtain a home that will provide all the luxuries of life and make you and your children rich.

### Hints on Checking Corn.

To the Editor of The Homestead:

Set your stakes deep each time. It pays, as a stake pulled up is apt to spoil the checking and bother in cross plowing. About one stake uprising in each 150 acres is the author's experience.

At the suggestion of a friend a few years ago, I have used kerosene exclusively instead of machine oil on pulleys and parts of check row that get dusty. It works well and does not gum up the parts it is used on. Fill an oil can with it and apply often.

A good-sized tin can with top melted off, and a little of the sharp edge rounded over for a thumb rest, makes an excellent article for dipping seed corn out of the sack, as it goes in and out easily with sack partly open or on a windy day.

Some object to the arch for marker rope on the planter. I like it well and think many times the cause for the objections is that too small a ring is used on it.

Keep a little can of axle grease on or near planter and rub a little on the runners at quitting time each evening, cloudy or fair. "Tomorrow" for planting, maybe many days hence; save rust, rubbing and (too late) resolutions.

When planting along side hills, sit erect directly over marker track, and it will greatly aid in making straight rows.

Don't have your wire "tight as a drum" one time and loose the next. This makes bad checking. Be your own tension, keep wire regularly snugly tight. I prefer a rope to the wire on the marker, but as a rope varies in length in different kinds of weather, I have an original way to keep it a uniform length. Cut rope short about eight inches, put snap on out end, (from planter) then put about ten inches of (small link) chain on marker proper and you may then snap the rope in any link to overcome changes in rope length due to weather.

A great aid to making a plain marker track on cloddy or uneven ground is to wire two to four feet of light chain securely to center of back of marker, so it will drag in marker track.

Much of the poorly-checked corn, especially, near end of the rows, is due, I think, to the method of bringing over wire when re-setting stakes. Do not "whirl and pull" it over away out in the

field. The planter does not draw it over this way, when you drive across the field. Walk to where you wish to reset the stake, stake in hand, wire snugly stretched, and set stake, and your wire will be over far enough for starting, and just as the planter will do it. Since a neighbor called my attention to this a few years ago, I have quit "whirling and pulling" wire, and in planting about 550 acres since, I have had much better and more satisfactory checking.

Make your rows straight, that is the nearest way across the field. Take out each little wrinkle as they appear, or they will rapidly enlarge. V. D. Michener.

## WASTED TO SKELETON

Baby in Torments With Terrible Sores on  
Face and Body—A Complete

## CURE BY CUTICURA REMEDIES

"My little son, when about a year and a half old, began to have sores come out on his face. Then they began to come on his arms, then on other parts of his body, and then one came on his chest, worse than the others. At the end of about a year and a half of suffering he grew so bad I had to tie his hands in cloths at night to keep him from scratching the sores and tearing the flesh. He got to be a mere skeleton. I sent to the drug store and got a cake of Cuticura Soap and a box of Cuticura Ointment and followed the directions, and at the end of about two months the sores were all well. He has never had any sores of any kind since. He is now strong and healthy, and I used only one cake of Soap and about three boxes of Ointment. Mrs. Egbert Sheldon, R. F. D. No. 1, Woodville, Conn., April 22, '05."

### ABSORBINE HELPED TO DEVELOP SPEED.

Mr. Aura Booth, trainer at Belmont Stock Farm, Xenia, Ohio, writes under date of April 25, 1906: "Last year I had a mare that they had tried for two seasons to race and could not, and when I came to this farm to train, I commenced to use Absorbine on her and she raced every week and got a record of 2:15 1/4 and could trot in ten before the season was over." Absorbine strengthens the ligaments and muscles, removes soreness, etc., and trainers who have used this preparation consider it an absolute necessity for the stable. Removes any soft hunch promptly, without blistering or removing the hair and horse can be used during treatment. There is nothing to indicate that horse is being treated. Two dollars per bottle at regular dealers or express prepaid upon receipt of price. W. F. Young, P. D. E., 40 Monmouth St., Springfield, Mass. See advertisement on page 2.

## I Stand Back of Huttig's Rubber Roofing

WITH A WRITTEN, PERSONALLY SIGNED, LEGALLY BINDING GUARANTEE.

Yes, sir,—I can afford to stand back of my roofing because it stands back of me, and makes my word good as gold.

I GIVE you a written guarantee that this roofing will do what I claim—not a mere VERBAL PROMISE, through your dealer, but an ironclad, legally binding guarantee, signed by the HUTTIG MFG. CO., capitalized at \$1,000,000, and responsible for every promise it makes.

No other roofing gives you a personally signed guarantee as strong as this. No other roofing can AFFORD to do so. Why can I do it?

Simply because my roofing is the only roofing on the market, made from pure, natural, imported Asphalt.

Asphalt comes from the Island of Trinidad. A large part of it is used in the exclusive manufacture of HUTTIG'S RUBBER ROOFING.

My roofing is made of long-fibered wool felt, densely compressed and heavily saturated with this specially prepared Natural Trinidad

Asphalt, which protects every particle of fiber. Now, mark this carefully: The saturation of Felt with Asphalt in HUTTIG'S RUBBER ROOFING is 150 per cent as against 104 per cent, the highest saturation of ANY of the roofings with the crazy names.

That's the principal reason why my roofing will not "sick" in the hottest, nor crack in the coldest weather.

HUTTIG'S RUBBER ROOFING requires no skilled labor to lay it. Every roll contains enough liquid cement, nails, caps, etc.

It will not run, rust, rot, crack, leak, blow off, require frequent repairs, and is not a fire trap. Now, here's how I feel about it. If you have use for roofing—

You don't want to foot with a doubtful article, when you can get HUTTIG'S with a guarantee that means absolute protection, both to your roof and to your pocketbook.

Just put the burden on HUTTIG. My shoulders are broad. I will take care of all your roofing troubles, if you will trust me. Ask your dealer for HUTTIG'S RUBBER ROOFING. If you can't get it of him, ask ME, and I'll see that you do get it.

Anyway, write for a big, free sample of my roofing and let me send you my booklet B and special Ironclad Roofing Guarantee. Write me personally, and do it today.  
**HUTTIG MANUFACTURING CO.,**  
707 East Second Street, Muscatine, Iowa

*H. W. Huttig*  
PRESIDENT.

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 850,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## PLYMOUTH ROCKS.

**BARRED** Plymouth Rock eggs. Also a few extra cockerels left. Finest flock of large, big boned, blocky, high scoring, 200 egg per year producing hens. Low prices. Write me. Mrs. A. A. Berry, Box 26, Clarinda, Iowa.

## REAL ESTATE.

**FARM FOR SALE BY OWNER**—One of the best farms of 1,200 acres in the northwest. Situated in the southeast corner of North Dakota, 15 miles from Minnesota, 9 miles from South Dakota and 2 miles from the village of Hankinson. 100 acres of large natural timber, 100 acres meadow and 1,000 acres under cultivation; nearly all fenced. Four lakes, springs, well and windmill, with excellent water piped to buildings. Fine farm buildings, large modern house, two tenant houses, ice house, machinery building, hog house, five poultry house, three barns, granary, tool house and other small buildings. With 22 horses, 100 head of cattle, 100 sheep, hogs and all kinds of poultry and machinery on the farm. Fine bearing apple orchard. An ideal spot for a nursery, summer resort, stock and diversified farming. Can only give you a vague idea of the natural advantages of the place. You have to see it to appreciate it. On account of age the owner wishes to retire. For further information write or call on R. H. Hankinson at Hankinson, North Dakota, who has farms of all sizes, improved and unimproved, for sale.

**WHY DO YOU GO** to the extreme Northwest when you can buy the best kind of land in central Wisconsin much cheaper and be living in God's country under the Stars and Stripes, and be nearer the best markets, such as Chicago, Milwaukee, Minneapolis, St. Paul and Duluth? The land is the most fertile, water the purest and best, and the grazing grasses grown are unequaled in any part of the country. Think for yourself. This is the best opportunity in the United States today; the climate is delightful and conditions such that any man who will work will make big money. Write for lists of improved and unimproved farms stating what you desire. J. W. Gray, New Auburn, Wis.

**150 ACRES**, 120 in cultivation, balance timber; 2 houses, 3 barns, 186 acres, 65 in cultivation, balance timber; house and barn. 142 acres, 50 in cultivation, balance in timber; no buildings. All three places join; all fenced; timber land used for pasture; black sloping bottom land, never overflows; plenty of good water in small stream; 8 miles from railroad, 70 miles south of Kansas City. For full particulars address one of the heirs, John S. Sutton, 1517 Washington avenue, St. Louis, Mo.

**STOCK RANCH FOR SALE**—7,000 acres near Eureka, Nevada, patented; plenty of water, perpetual flow; controlling 30,000 acres contiguous pasturage; ranch now stocked with 1,000 head of cattle, many horses, etc. Property fenced and contains modern improvements, houses, barns, etc. Cutting 600 tons of hay. Broken health only cause for sale. Price, \$50,000. For terms and particulars address the owner, Mrs. M. Winzell, Eureka, Nevada.

**EIGHTY ACRES**—70 acres plow, 10 acres timber pasture; one mile to railway town, ½ mile to German M. E. church, 3 miles to Lutheran church, 40 rods to school; 1½ story house and two additions 14x16 and 12x14; new barn, 24x34x14; granary, 16x20; wagon shed and corn crib and new shed 12x40; ice house in shed, \$1,300 fire insurance on buildings. Price \$3,250. Reasonable terms. Whitney, Rosenberger & Thiayer, St. Cloud, Minn.

**THREE FARMS FOR SALE** in Dade County, Missouri, one 240, one 320, one 400 acres. These farms are all well improved with good buildings of all kinds; good rich black and red soil, plenty of living water; no better climate; considered among the best farms in the county. Price, \$30.00 per acre. For particulars address, Dietrich Meyer, Jerico Springs, Mo.

**A NICE LEVEL FARM** of 200 acres. 150 acres under cultivation, balance can be plowed very easily. It is a black sandy loam, no buildings, very cheap at the price; four miles from a good railroad town, one mile to church and school. Price, \$15.00 per acre. Whitney, Rosenberger & Thiayer, St. Cloud, Minn.

**ARE YOU** looking for a home? If so, don't buy before seeing copy of the Real Estate Journal. It has nearly 4,000 farms, city property and stocks of goods advertised in it, and reaches 45,000 readers each issue. Advertising rates 2 cents per word. Send 10c in silver for two months' trial subscription. Farm and Real Estate Journal, Traer, Iowa.

**AN IDEAL FARM**—400 acres about nine miles from the county seat; 250 acres good wheat land, 15 acres first-class alfalfa land, balance excellent pasture land, plenty of living water. This land lies close to school and is a No. 1 layout, for \$7.00 per acre. Write for list. O. K. Land Co., Meade, Kan.

**160 ACRES**—60 acres under plow, 10 acres meadow, 10 acres timber (oak), 50 acres timber pasture all fenced. Large lake adjoining land. Small set of good buildings; 12 miles from St. Cloud, 3 miles from railway town. Price, \$21.00 per acre. Whitney, Rosenberger & Thiayer, St. Cloud, Minn.

**OKLAHOMA 25 CENTS**—Oklahoma colored new state map and book describing soil, crops, rainfall, climate, church, school and social conditions, with free information mailed on receipt of 25 cents. James M. Powers, Lawton, Oklahoma.

**BELLEV & CO.**, Wichita, Kansas, handle the best farms in Kansas and Oklahoma, also timber lands in all parts of the south. Write for list.

**MY WALL PAPER RENOVATOR** makes old wall paper look like new

## OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

## LAW QUESTIONS CONSIDERED.

## WANT OF CERTAINTY.

A Subscriber, Clayton, Kan.—A rented his farm to B and gave him the privilege of sowing fall wheat on it, and B sub-rented a part of it to C, who sowed fall wheat on it. A had the farm listed for sale with D (an agent) and D sold the farm to E, contracting to give possession. Can E hold the land and, if so, who is to settle with B and C for the wheat they sowed?

Answer.—The smartest Philadelphia lawyer that ever lived could not give a reliable answer to the foregoing, without straining his guess works. We allow the statement and question to be printed, simply for the purpose of showing with what amazing ingenuity a case can be stated so as to miss every important point in it.

## SHARKS OF A SALE STABLE.

A Subscriber, Camby, Ind.—A bought a mare in Indianapolis from B who was a stranger to him, for \$140. B claimed to have brought the mare from the country to sell for his mother. He represented the mare to be sound. Before A took the mare away from the barn where he bought her, C said to him, "That mare has bad wind." Then a horse dealer by the name of D who was there, said he could tell whether or not her wind was bad, so A backed the mare from the stall and C quickly put a bridle on her and mounted her and kicked her with his heels, and D cracked a whip at her and she started off suddenly and soon began to blow and gasp for breath, and the blood was running from her nose and mouth. A thought he had been cheated by B, and then and there sold the mare to D for \$75. He has since learned that there was really nothing the matter with the mare except that C and D had doped her and can prove this by B. What can A do?

Answer.—First, he can sue C and D for damages and recover judgment, provided he can prove what he says; whether he could collect the judgment would depend on the financial responsibility of the parties. Second, when he wants to buy a horse, keep away from the average sale stables of a large city.

## DESCENT—WILL—MISSOURI.

A Reader, Kirksville, Mo.—A and B are husband and wife. They have a small farm in Missouri, the deed of which is in B's name. They have two children. (1) Suppose B should outlive A, how would the farm be divided according to the laws of Missouri? (2) If, after A's death, B should sell the farm, could the children claim their shares, both being of age? (3) In case A should outlive B, how would the land be disposed of by law? (4) At the present time could A make a will devising the farm to B?

Answer.—(1) It would not be divided at all. B would continue to own it until her death, and then it would go to the two children, equally, share and share alike. (2) They could not. B would have a perfect right to sell the farm and the children would have no rights about it. (3) A would have the use of it during his lifetime, and at his death it would go to the children equally, share and share alike. (4) Such a will would have no legal effect whatever, because

B is the owner of the land. A has no interest in it which he could dispose of by will.

## FIXTURES—SALE—REPAIRS.

A Subscriber, Algona, Iowa.—(1) I had a bargain partly made to sell my farm. Before the deal was closed I needed more room for my corn, so I bought lumber and put in a floor over a hog house, without nailing the boards to the joists; after this the deal was closed. Can I remove the floor and take the boards away when I give possession of the farm? (2) On the same farm there was a floor over a shed which had been used for several years. It was loaded with corn when the farm was sold. About three weeks afterwards it broke down under the weight of corn and wrecked the shed, besides doing considerable damage to me. Can the purchaser hold me liable for repairs on the shed and replacement of the floor?

Answer.—(1) We think the floor should go with the farm as a fixture. (2) We think not, unless you did something after the sale of the farm, that caused the floor to break down.

## COMPENSATION OF ASSESSOR.

An Iowa Subscriber—I was elected assessor and gave a \$500 bond. I am required to add up and copy all books, take birth records and crop statistics. The supervisors have fixed the price of this work at \$2 per day, and limited the number of days to about thirty-five. I cannot do the work in the time fixed. My predecessor put in about sixty days. Can I recover compensation for the time which I necessarily have to spend over the limit fixed by the supervisors?

Answer.—You cannot. Section 592 of the Code, page 267, provides, "Each township assessor shall receive in full for all services required of him by law, a sum to be paid out of the county treasury, and fixed annually by the board of supervisors of the county at the January session: said compensation shall be for the succeeding year, and shall not exceed the sum of \$2.00 for each day of eight hours, which said board determines may necessarily be required in the discharge of all the official duties of such assessor."

## LAND AGENT—COMMISSION.

A Subscriber, LeRoy, Iowa.—On the 20th of last December a land agent with another man in a buggy overtook me on the road and asked me if I wanted to sell my farm. I said that I would sell it for \$100 per acre, provided I could get the place I wanted. The land agent wanted a commission of \$1 an acre to sell it for me. Finally I agreed that he should have that commission provided a deal was made, and that depended of course on whether or not I could get the place I wanted. Then the man who was with the agent and I entered into a contract by which I was to sell him the farm for \$100 per acre, provided I could get the place I wanted, and I was to have a week to find out and accept the offer. I failed to get the place I wanted, and did not close the deal with the man who came with the agent. Now the agent demands his commission. Can he recover it by law?

Answer.—We do not think the agent can recover his commission by law. The sale or deal depended on whether you could get the place that suited you. You failed in this and so your sale did not take place—the deal was not consummated.

## HUSBAND, WIFE AND HEIRS.

A Subscriber, Rockwell City, Iowa.—A and B are husband and wife and have been married fifteen years. A owned 160 acres of land and had three children by a former wife. B owned eighty acres of land and had \$1,200 in money. She gave the money to A, but has no notes for it. There were no children born of the marriage of A and B. B has one brother living and four nephews—children of a deceased brother. (1) In case B should die first, how would her property be divided according to the law of Iowa? (2) In case A should die first, how would his property be divided? (3) Would the wife's brother get a share of the \$1,200 in case of her death?

Answer.—(1) Her surviving husband would get one-half of her property, her brother would get one-quarter and the four nephews would get one-quarter between them—that is, assuming that the parents of B are dead. (2) The surviving wife would get one-third, and A's children, by the former wife, would get two-thirds between them. (3) If the money belongs to B at the time of her death, her brother would be entitled to one-quarter of it.

## HOMESTEAD LAWS.

A Subscriber, Sherwood, N. D.—Suppose a woman has a United States homestead, and marries a man who has not used his homestead right. Can he use his homestead right after she has made final proof on her claim? (2) Are the homestead laws the same in all the states?

Answer.—(1) The husband can use his homestead right after his wife has proved up on her claim. (2) The law allowing settlers to enter homesteads upon the public domain—that is, unappropriated public lands—is a United States statute applying to all states and territories where there are vacant public lands. There are laws called homestead laws, which allow the head of a family to claim the dwelling place with some land on which it stands, exempt from seizure and sale for debts. These home-

stead laws differ from one another, each state having its own homestead law. The United States law and the state laws are not of kin to each other. They concern different rights.

## SCHOOL TAXES.

A Subscriber, Trempealeau, Wis.—There is a school district here located in two towns. (1) Does the law require the assessor of each town to meet with the clerk of the district every year to equalize the assessment in the district? (2) How are the officers paid? (3) How old must a woman be, in order to vote at a school meeting?

Answer.—(1) Section 471 of Wisconsin Statutes Supp. provides as follows: "In case of a joint school district the assessors of the town, city or village in part embraced therein shall meet at the district school house with their respective assessment rolls at two o'clock in the afternoon of the last Saturday in July in each year, for the purpose of comparing and investigating the assessed valuation of the taxable property in the several parts of such districts, separated by town, city or village lines, and shall determine whether the assessed valuation of such property on the assessment rolls be just or not. (2) Not exceeding three dollars per day, the amount to be fixed by the town board. (3) Twenty-one years."

## STEP-CHILDREN NOT HEIRS.

A Nebraska Subscriber.—A, who was a bachelor, married B who was a widow and had seven children, the eldest of whom was thirteen years old. At the time of the marriage A owned eighty acres of land and B owned 160 acres. A lived on B's farm for several years and took all the proceeds thereof. Later he built a house on his own land, and they moved upon it. A bought 160 acres of land and took the income from B's land to help pay for it. A died about four months ago, leaving one child of the marriage between him and B. (1) What share of A's property will this child get? (2) When A and B married he promised that he would give her eldest son a good start if he would stay at home and work for him till he was twenty-one years old, and the boy did stay and do a man's work for A till he was of age, but A never gave him a cent. The boy became of age nineteen years ago. Can the boy collect anything from A's estate for his labor by the laws of Iowa?

Answer.—While the correspondent signs himself A Nebraska Subscriber, we infer from the last question that all the transactions took place in Iowa. Answer to first question.—A's child would inherit all of A's property, subject to the widow's allowance, and distributive share which is one-third. So aside from the widow's allowance A's child would be entitled to two-thirds of A's property. A's step-children do not inherit from A. (2) If the wife's eldest boy ever had a valid claim against A it is long since barred by the statute of limitations. He cannot recover anything from A's estate.

There are more than one causes for unhappiness, but if it is wealth, as it sometimes is, it is easily "got rid of."

## TWO-Row "Doublet" TWO-Good Points

Good for not only the "Big Farmer" but equally so for the "Smaller Farmer" who finds help scarce. The principle is beyond question a complete success. Our kind in particular has two exclusive features—Straight Forward Push Guide; Full View of Both Rows, besides being fully equipped in other good points. ## VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

### SYMPTOMS AND TREATMENT.

#### BOG SPAVINS.

We have a bay colt nine months old weighing 970 pounds, that has always done exceedingly well, but she seems to have some soft springy bunches on the front side, inside of her gambrel joint. When you press on them they seem to spring back quick. She is not lame or they do not seem to be sore. I have never tried anything for them. I first noticed her legs being a little puffy last December. She has always been a rough player on frozen ground for a heavy colt. Please tell me what to do for her in your next paper. Her mother and father had good legs, but her grandmother had bad hind legs.

Colt may outgrow the puffs referred to, but to help matters clip hair from parts and rub in a little iodine ointment each other day until skin becomes irritated; then stop for a few days and repeat if necessary.

#### ABORTION—FISTULA.

(1) My sows are losing their pigs; they lose them when they are about three months along and I have had six sows out of nineteen that have lost their pigs. I would like to know if there is anything I can feed them to stop it. (2) I have a mare that has the fistula. Is there any treatment I could give her and work her?

(1) Before we could tell you the probable cause of the abortions would have to know exactly how sows are fed and cared for and whether there is mold in food or any other irritative cause. A careful investigation will have to be made for the cause and it probably is in the food. Call in a veterinarian to make such an investigation. Meanwhile isolate those that have aborted. (2) As a thorough opening up of each pocket and pipe is necessary to the success-

ful treatment of fistula, animal should not be worked after the operation. When the cutting has been done swab the inside of each pocket and pipe (laid open) with tincture of iodine once daily after cleansing.

#### SICK HOGS.

My hogs are sick and act strangely to me. They have a very bad cough; seem to be stiff, but seem to be neither constipated nor the opposite. Will not eat any to speak of. I have lost some. They have been sick over a week. They have no fever and seem to breathe strongly. I have some that have been sick about a week and seem to gradually grow a little worse. I have asked a number and no one seems to know what ails them. Can you please give me advice? Am anxious to hear at an early date.

When a hog dies it should be opened and examined for cause of death. You do not tell us age of hogs or how you are feeding and caring for them, so it is impossible to tell much as to nature of trouble present. We presume worms may be the cause, however, and for this we would give turpentine in milk or slop at rate of one teaspoonful for each eighty pounds live weight. Give it for three mornings in succession, and repeat the following week. Change food, allow free range on grass; disinfect and whitewash houses; mix lime-water in slop when not giving the turpentine. Drench with the medicine if they won't take it in slop.

#### LAMENESS.

I have a bay mare twelve years old that is very lame and the lameness seems to be all in her front legs from the knees down. She stays down a great deal of the time and when she gets up she stands on the toes of the front legs with the legs pitched forward and her weight on her hind legs. She stands that way awhile and then moves with much difficulty. The tendons below the knee are swollen and sometimes very hard and sometimes soft and the part of one leg is drawn back at the ankle and when she bears her weight on it in walking, it gives down with the foot back. She has been some lame for two or three years, but not so bad as now. I have not worked her any all winter, but would like to now and cannot. I think she is in foal. She is always ready for her feed and works well. Can you tell me what is the trouble and what I can do for her?

The lameness no doubt is rheumatic and there is very little chance that she will permanently recover. Clip hair from tendons of forelegs and also from hoof-heads and blister twice a month with a mixture of one dram of biniodid of mercury and two ounces of cerate of cantharides. As she is in foal internal remedies can scarcely be used with safety; otherwise we would give her two drams of salicylate of soda two or three times a day. She should occupy a sunny, dry, well-ventilated, deeply-bedded box stall. Feed to keep bowels open. Do not feed corn.

#### YEAST TREATMENT.

(1) I have been informed that there is on the market a kind of tablet of a yeast nature, which when placed in the womb of a mare, dissolves and forms a kind of gas, and by the use of this tablet a mare is almost sure to get with foal. Can you tell me anything of this remedy, its nature, its effects, and where I can procure it? (2) What is the best feed for a stallion during the breeding season? (3) What effect has good alfalfa hay on the breeding qualities of mares and stallions, and does it in any way affect their fertility?

(1) You have been misinformed. The yeast treatment has time and again been prescribed here by the veterinary editor and is not a tablet for sale on market, neither does it act as you suggest. Take a cake of ordinary compressed yeast and stir to a paste with a little warm water. Allow to stand in moderately warm room for twelve hours, then stir in a pint of luke-warm freshly boiled water and allow to stand another eight or twelve hours as before when it will be ready for use and simply is to be injected into vagina (not womb) of mare or cow after flushing out that passage with simple luke-warm water by means of large syringe or hose and funnel. Make the injection at once and again the moment the animal is seen to be in heat and have her served as soon as period of heat is about past. By noting time animal comes in heat each month yeast mixture may be prepared in readiness for use at right time. The treatment also is excellent for leucorrhoea (whites) for that trouble, being injected once a week until recovery. It works well for barren sows as well as mares and cows. We hope every reader who does not keep a file will clip out this answer and preserve it for future reference. (2) Feed stallion sound, whole oats, dry bran and hay without corn or green grass and avoid condition powders and condimental foods or drugs. See that he has plenty of work or exercise every day. (3) There is a prejudice against green alfalfa hay for stallions and mares unless they were raised on this feed. It

167 Lake St., Chicago, Ills.

is safe in small quantities along with other dry hay, but as indicated already it is best not to feed the stallion green feed, if he is to do a deal of service.

#### TUMORS IN UDDER.

I have two Chester White sows one year old. They had a fall litter of pigs. They were all right until after they weaned their pigs. There came a lump like a caked teat, and it kept getting larger, until it was as large as a gallon crock. It broke and ran. Does not seem to be sore when touched. They are in poor flesh. They eat hearty. They were bred about the middle of January. Please give me some information.

The sows were affected with garget (inflammation of the udder) and the quarters have been invaded by the fungus known as "actinomyces" which also causes lump jaw of cattle. Sows in this condition should not be bred, for when pigs come there will be sure to be more trouble. The tumors are practically incurable unless by use of the knife and hogs do not well stand such operations. Inject tincture of iodine into the openings every other day and at the same time paint exterior with same tincture.

#### QUITTOR—WART.

(1) I have a gray mare five years old that got cut in her left front foot on a wire fence two years ago. She is lame, foot is enlarged and when driven much on the road it breaks above the hoof and pus runs, which seems to relieve her. Foot is all healed up nicely. She weighs 1,200 pounds. What can I do for her? (2) What will remove a wart from a horse?

1. Clip hair from coronet (hoof-head) and blister twice a month with a mixture of one dram of biniodid of mercury and two ounces of cerate of cantharides. Rub the blister in for fifteen minutes; tie mare so she cannot lie down or bite part; wash blister off

in three days, then apply lard daily. If a "pipe" is present and discharges pus it should be scraped out and injected with a saturated solution of corrosive sublimate; then poultice for a week with hot flaxseed meal; then inject again and apply blister, these treatments being alternated until recovery. Such cases usually cannot be successfully handled without veterinary assistance. (2) Saturate wart once daily with glacial acetic acid applied drop by drop.

## Going to Build?

If you are planning to build have a care in the selection of materials. Don't let price get the better of quality.

## LINOFELT

will cost you a little more than building paper but it will keep your house warm and comfortable and save about a third on your fuel bills. It's a great deal cheaper to build a warm house once than heat a cold one all the time.

If you are planning to build this year let us send you a sample of Linofelt, together with reports of scientific tests of its efficiency.

Linofelt is made of a degummed flax fibre, stitched between two sheets of rosin-sized building paper, and is absolutely the best non-conductor of heat and cold known. Actual test has proven it to resist the passage of heat 44% more than the best building paper.

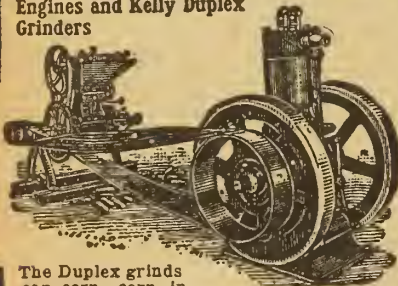

Write for booklet and sample of Linofelt. Just the thing for Barns and Poultry Houses.

## OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

### TESTING COWS INDIVIDUALLY.

The Ohio Experiment Station has recently issued a circular giving some information relating to the individual records of dairy cows.

That station found that in 333 cows tested, these representing eighteen herds, seventy-four cows averaged only 126 pounds of butter fat every year, and thirty produced 300 pounds or more of butter fat annually. Attention is called to the fact that if this proportion is maintained throughout the state of Ohio, there are about one quarter million cows that fall short of yielding any profit whatever, or even paying for their food and care.

A cow at the Ohio station that produced 231 pounds of butter annually paid a profit over and above the cost of her feed of \$24.00, while a stall mate that averaged 330 pounds of butter a year made a profit of \$50.

But it must be remembered that a butter fat yield of 231 pounds annually is seventy or eighty pounds above the average in the corn belt states, and when this reduction is made practically the entire profit disappears.

Attention is called to the fact in the bulletin referred to that in order to make a net annual profit of \$1,000 from a dairy made up of cows that yield on an average of 330 pounds of butter fat a year, it would be necessary to keep thirty-four animals. On the other hand, it would require a herd of 262 cows to yield \$1,000 profit when the butter fat yield per cow averages only 231 pounds per year. The difference in the amount of capital involved in establishing the two types of herds is very great and no man, if he stopped to make the comparison, would think of putting in the herd of cows of the lower capacity, providing the others were available.

Prof. Fraser, of the Illinois Experiment Station, has prepared an interesting table along this same line, showing the mammoth proportions of a herd of low yield required to produce the same profits in a year as a herd of thirty or forty cows with an average capacity of 300 pounds of butter or better. We expect to present this table in the dairy department in an early issue and we believe that many of our readers, who are interested in dairy problems will be startled by the results of Professor Fraser's investigations.

### RAISING CALVES CHEAPLY.

The following communication has been received from a subscriber, Mr. John Shoffer:

I have some calves I desire to raise without feeding them milk and appeal to you for some advice on the subject. It is my intention to take them from the cow just as soon as the milk is ready to use.

We have known so many instances where men have succeeded in stunting the growth of their calves by trying to bring them through without milk that we hesitate to give advice on the subject. Recently our attention was called to a case where calves were brought to an age of three or four months without milk and were apparently in a thriving condition and yet more than half the number died. They died apparently without even going to the trouble of getting sick because the owner in this case said he could detect very little the matter with them.

If any of our readers have succeeded in raising calves, from the time they were three or four days old without using milk and at the same time bringing them through in good thrifty condition, we shall be pleased to give the method for the benefit of Mr. Shoffer and others who are interested in this subject.

We have always considered it wise to veal the calves at the age of six weeks or two months when there was liable to be a shortage of milk. We have preferred this to the making of a runt steer or heifer, though it is just possible that we have been making a mistake all along.

### Unprofitable Cows and Why.

To the Editor of The Homestead:

The unprofitable cow has often been held up before the farmer and ridiculed, her evil doings magnified, and her prop-

Mrs. J. Renken, Trenton, Ia., says "We cleared \$100.00 in six months off seven cows."

Toronto, Can.

THE SHARPLES SEPARATOR CO.,  
WEST CHESTER, PA.

Chicago, Ill.

## TO FARMERS AND DAIRYMEN

It will pay every farmer or every farmer's wife to sit right down and write for Sharples' "Business Dairying." This valuable book contains information that can be found in no other book, and will help any dairyman to make his business more profitable. It tells How to Feed, What to Feed, How to Care for Feed, What Foods Produce Greatest Amount of Milk, How to Care for the Dairy Cow in the way to get best results, and the whole book is practical. To get all the good out of your milk you should of course use

## THE SHARPLES TUBULAR CREAM SEPARATOR

It is not only guaranteed to more than pay for itself annually, but the ease with which you can skim, the low can, the self-oiling bearings, the simple Tubular bowl with only one little part inside to wash, the moderate price, are all points you should know about. Send today for the free "Business Dairying" and full information about the Sharples Tubular, giving number of cows you keep. Ask for booklet G. 121

## Yes, Something New!

## —THE— Monarch Cream Separator

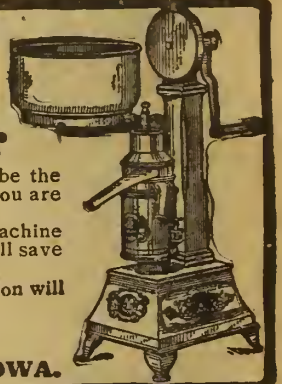

Is a step in advance of all others. We guarantee it to be the lightest running and most convenient machine made. If you are needing a separator, why not get one up-to-date?

We have fewer parts to wear out, therefore it is a machine of longer life. It will not only save all your cream, but it will save your strength. Why buy a man-killer?

If we have no agent in your town, our cash proposition will save you money.

Write us for free catalogue and state the size of your dairy.

LISLE MFG. CO., Box 39, CLARINDA, IOWA.

er place pointed out as being the butcher's block. But what is the real cause of unprofitable cows? Mr. W. D. Hoard, the grand old man of the dairy industry, has said, "What we need is a new breed of dairymen." Yes, there are other "banana peels" besides poor cows upon which one may slip while on his way to successful dairying. Men of merit are as essential as cows of merit. The unprofitable, no-purpose man will probably have cows to correspond.

A cow which would be unprofitable to one man might be a source of profit to another. Does it seem reasonable to you to expect a cow which has been running in the stalks all winter to yield much of an income?

I believe that there are very few farmers who do not know that they should weigh and test, and who do not know something of the intelligent management of a herd. The farm journals are full of good ideas. The advantages of the Babcock test have been pointed out so often, but, as yet, I think there are comparatively few unprofitable corn belt cows that are on their way to the butcher's block. They are probably about as far from the block as some of their keepers are from having a comfortable bank account. I have heard some farmers say, "I wish I had time to test my cows and care for them the way we are told to do, in the papers, but I have too much else to do. I'll do that some day when I get more time." Industry does not need to wish. Benjamin Franklin said, "He that lives on hope will die fasting," and "Drive thy business, let it not drive you."

I do not mean to say that everything you read in a farm journal can be put into practice on your particular farm, nor that one should experiment with every new idea that comes into print.

Lord Bacon gives us this advice, "Read not to contradict nor confute; nor to believe and take for granted; nor to find talk and discourse; but to weigh and consider. Some ideas are to be thrown away after being tasted, others to be swallowed, and some to be chewed up and digested." If there is anything under the sun that the keeper of cows needs to taste, chew up, swallow, digest and assimilate, it is the scales and Babcock test. It would certainly be the most excellent spring tonic for this unprofitable keeping of cows. Those who have used it say that it puts new life into the worker by arousing interest, throws the poisons out of the system (the unprofitable cows) and is a positive cure for cramps in the cream check. The bank account is toned up and assumes a healthy, ruddy glow. There is no danger of taking an overdose. Give it a fair trial and you will never be without it again, for there is positively nothing so absolutely indispensable to healthy dairying.

Whenever you see a farmer going about with a long face, complaining at the treatment he gets from the creamery, and moaning about there being no money in keeping cows, you can at once set him down as one who is not pushing his business, but is letting it push him. Recommend that he "take something for what ails him." Tell him to try a dose of "Tonique de Babcock."

Herman Horneman.

Agricultural College, Ames, Iowa.

### Calf Scours.

If there is one question asked more frequently than any other in connection with calf raising, it is what to do for scours.

There are two distinct diseases known by this name. The more serious, but,

fortunately, the one least frequently met with, is a germ disease called white scours. Of its origin or treatment but little is positively known by even our best authorities. So many out-breaks have occurred in aborting herds that some claim there is a close relationship between the germs that cause both diseases and that the calf is born with the germs already in the digestive tract. Others claim that the germ enters the system through the raw navel and claim immunity by sprinkling the bedding and stall with carbolic acid water before the calf is dropped and upon birth, anointing the navel with some good disinfectant. For this last purpose a mixture of iodoform and boracic acid in equal parts has been recommended. These precautions are no doubt wise where the disease is anticipated.

As a remedy, high authorities advise castor oil, but I have never yet seen good results from its use and I will confess that I have had a prejudice against the castor oil bottle dating from infancy. I am seriously impressed with a maxim which I once got from a veterinarian, which is: "Better do nothing than do worse."

I have never had but one case of this disease. The dam had aborted twice and the calf showed symptoms soon after birth, which developed into quite a severe case in a few hours. I milked the cow nearly dry, so that the calf could get but little nourishment, and that in the natural manner. The calf soon recovered and is now one of the thriftiest animals in our stable. But of course, "one bird does not make a summer," and this is only one case.

Mr. George Wylie reports good results with soothing sirup, giving two or three teaspoonsful daily, according to the severity of the case. Mr. H. C. Taylor, while administering prescribed medicines, says he has had the best success with those calves that were left with their dam. Calves with this disease usually die or recover in a few hours.

The other form of scours is far more common, but not nearly as serious. It is usually a mere diarrhea resulting from indigestion, the primary cause of which, nine times out of ten, is injudicious feeding. Sweet milk in proper quantity, fed from clean pails, with what fresh water the calf wishes to drink, plenty of wholesome, dry feed, fed in a manger, roomy, dry and well littered quarters are all factors in raising

healthy calves.—(L. E. Scott, in Wisconsin Annual.)

#### CALVES RUNNING WITH COWS.

The following communication has been received from a Kansas subscriber:

I am engaged in dairying in an indirect way, though instead of marketing my finished product in the form of butter or cheese I send it to market on the hoof. To be brief, I will say that I am engaged in breeding Short-horn cattle and it has always been my belief that no man in raising beef cattle could afford to be anything but liberal in the use of feeds. I allow my calves to suck the cow, and what I desire to ask is, which is the better plan, to let the calves run with the cows or to shut them up in yards or lots and allow them to have their milk twice a day only? I have heard it stated that one would spoil a cow as a milker if the calf were allowed to run with her. Is there anything in this theory? What are the relative advantages of the two methods in your opinion? Which plan will make the best calf, ordinarily?

Generally speaking, it is more advisable to let calves suck twice a day after they are a week or two old than to allow them to run with their dams. In the first place this method develops the udder of the cows much better than if the calf is allowed to run with them. In the next instance one can develop the eating habit much more quickly this way, and it is not unreasonable to expect a young calf to be on a good grain ration by the time he is five or six weeks old, providing, of course, that it is not allowed to run with its dam. This enables one to wean a little earlier and it also takes a calf through the weaning period much easier on both the cow and the calf than if they are allowed to run together all the time.

Then, again, if one desires to breed early it is absolutely necessary to take the calf away. It has always been our opinion that it is an easier matter to keep a cow up in flesh when the calf sucks but twice a day than is the case where it runs in the pasture with its dam.

Some might object to the trouble involved in putting the cow in the stanchion and turning the calf out, but this is after all an insignificant matter. We believe that in the case of any breed of beef cattle it will pay to do a little stall feeding almost the year round when the cows are giving milk, and it involves but little work to turn the calves to the dams at feeding time. We have in mind many instances where men make a mistake by turning pure-bred cows and calves out in the spring and letting them

## BEST OF SEPARATORS ACTUALLY FREE OF COST.

This is really the fact in the purchase of a **DE LAVAL CREAM SEPARATOR**. Any reputable person may buy a **DE LAVAL** machine on such liberal terms that the machine **actually pays for itself**.

And it not only does this the first few months, in which it saves its cost, but goes on doing it for fully twenty years to come. In the face of these facts buying trashy "cash-in-advance" separators, or any other than the **best**, is penny wise, dollar foolish. Such machines quickly **lose** the cost instead of **saving** it, and then go on losing instead of saving.

There is no possible reason why any buyer of a Cream Separator should be content with less than the **DE LAVAL** and there never was a more promising time to make this most profitable of all farm investments.

Why not send for catalog and particulars?

## The Empire proves its claims

**CLAIMS** are words, proofs are facts.  
 Mere claims have often sold goods. Proofs are a record of dollars made.  
 You, or any one else, don't want the cream separator that *claims* the most. You want dollars from your handling of milk.  
 Therefore you want the *proved* separator, the dollar-making

## Frictionless Empire Cream Separator

Here are some *facts* that will interest you: The Empire Turns the most easily—is practically frictionless;—Is most easily washed—a few simple parts without a cranny or crevice in them;—

Gets all the cream, and the highest quality of cream at that;—

Is durable—will not get out of order—will cost you practically nothing for repairs.

These facts spell dollars for you, if you give them the opportunity.

### Let Us Prove Them

Send for our new catalogue and proofs. Ask for our free dairy books too. They cost you *nothing*, but will show you where you can make *dollars*.

**Empire Cream Separator Co.,**  
 Bloomfield, N. J. CHICAGO, ILL.

run until fall without giving any special attention to either. When weaning time comes the probabilities are that the calf will lose anywhere from fifty to one hundred pounds before it settles down to eating, and it is our opinion that a perfect recovery is never made from a period of this kind.

After all, the best excuse that one could give for the practice of keeping calves away from their dams most of the time would be that nearly all successful breeders of beef cattle adopt this practice, and unquestionably their practice is based on wisdom.

#### How Valuable is the Manure Spreader?

To the Editor of The Homestead:

I am glad to see you invite users of spreaders to answer alongside of the makers who pay for space.

I had what I thought was a good system of handling manure before purchasing a spreader, which in brief is this: Low, wide-tired wheels on a wagon weighing 800 pounds less than a spreader of equal strength. I scattered in streaks and harrowed crosswise. The harrow would gather about one-half the manure and distribute the most of it by the time it reached the next streak. If one harrowing did not do well two would do better. We usually loaded from 2,500 to 3,000 pounds of manure and that gave the team about thirty minutes' rest in the field. It takes about fifteen minutes to go and come, according to distance traveled and gates to open, etc., and about forty-five minutes to load on a low narrow box. This makes six loads of 3,000 pounds in nine hours. We have often beaten this record, but the boys soon had blisters on their hands. It would take about one-half hour to do the harrowing when the ground was fit. I think that I have never had a man spread it from a wagon thinner than twenty tons to the acre, except when the spreading was done in streaks and the streaks have been very uneven except when following stalk rows. I think that I have never unloaded a wagon of manure in a cold wind without catching cold.

I got the thin points in the field pretty well covered in 1905 so I invested \$100 in a spreader with 34-inch floor space, weight 1,900 pounds. A good team will handle 1,600 pounds of manure in it as easily as 3,000 pounds in my wagon. When we get to the field the work of the team begins and continues about seven minutes, if we are spreading six loads

When writing to advertisers please mention this paper.

to the acre, and the work is done better and much thinner than by hand and the harrow. Where ground is too rich for more than six loads per acre, additional manure would be worse than thrown away because it would make the grain lodge. Where land is thin I have found no waste in putting on twenty tons per acre.

It takes about one-sixth more time to load a wide, high spreader and keep it oiled and the burrs tight than it does to load a 3x10 wagon box on low wheels. The different kinds of manure need to be forked evenly over the spreader so that the cylinder will scatter it properly. Where land rents for more than \$3.00 per acre and is too rich for more than six or eight loads per acre, a spreader is worth more than \$3.00 per day, I think.  
 Chas. A. Babbit.  
 Brown county, Kan.

#### BARGAINS IN FARM LANDS.

If you want to learn about exceptionally rare bargains in South Dakota farm lands or unusual business opportunities in the new towns in the magnificent new country being opened up by the Minneapolis & St. Louis R. R. extension write for beautifully illustrated descriptive pamphlet on the "New Empire," the farmer's and stockman's paradise. This pamphlet will be mailed free. A postal card will do it. Write at once before edition is exhausted, to A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

#### CHEAP ONE-WAY RATES.

Every Tuesday during March and April, the Minneapolis & St. Louis R. R. will sell cheap one-way excursion tickets to points in Minnesota, North and South Dakota and the Canadian Northwest. Rate is \$14 to most North Dakota points. Buy tickets at 512 Walnut St., or Union Station. For further information write W. K. Adams, Dist. Pass. Agent, Des Moines, Iowa.

## HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

## Planting an Orchard.

To the Editor of The Homestead:

Every farm should have its orchard. If fruit is desired for home use only, early, medium and late varieties should be selected so as to afford a succession of fruit.

If the orchard is to be a commercial proposition a few standard varieties should be adopted, preference being given those for which the popular demand is strongest.

But there are matters to be considered before the varieties are chosen. The site is to be settled first. Where shall we establish the orchard?

In general, low or bottom lands are to be avoided. They do not drain so well as higher areas of a sloping nature; hold frost longer in the spring and often catch the early frosts in autumn when surrounding high tracts are not visited at all.

Select the highest suitable piece of land on the farm. If it slopes to the south, an important advantage will be had in that the fruit will color more brilliantly than it would were the slope

toward any other point of the compass.

It is essential that orchard lands should be well drained. If the ground slopes, surface drainage will probably be adequate, but it is equally important that underground drainage be secured. This may be accomplished by the use of tile. Very few persons who have not studied the principles of fruit growing will concede that drainage is as important a factor as we would have our readers believe.

Drainage increases the porosity of the soil, makes it more uniform in its relation to the growth it supports, provides for aeration and thus safeguards the trees in a measure against the ill effects of prolonged wet weather and severe freezes.

Well drained soils become warm in the spring earlier than undrained soils. Moreover, they yield more satisfactorily to tillage.

It is a mistake to give an orchard a wornout soil on the theory that trees do not appreciate fertile soil that is also in good mechanical condition. Trees are heavy feeders and inveterate drinkers; they must have plenty of plant food and an abundance of moisture.

A clayey soil in a fair state of fertility can be relied on to nourish fruit trees satisfactorily. Two or three years in red clover following a cultivated crop like corn should serve as an effective preliminary step in chemical and mechanical improvement. An application of phosphorus in the form of raw ground rock phosphate undoubtedly would prove a profitable outlay.

Having selected the site and planned to put the soil in suitable fix for the trees, attention may be turned to the varieties of fruit. In central Wisconsin, where the trees are planted, we include in our list of varieties of apples for a home orchard the following: Jonathan, Winesap, Ben Davis, Rhode Island Greening, Romanite, Smith's Cider, Baldwin, Hutsman, Favorite, Grimes' Golden, Ralls' Genet, Snow, Maiden Blush, Red June, Gano and a dozen others which we do not now recall. We had, all told, about twenty-five varieties on ten acres, Jonathan, Genet and Ben Davis predominating.

For market my experience is that the Ben Davis and Jonathans were the best. These are still the leading commercial sorts in that part of the state.

It is no trick nowadays to get good trees if reputable nurserymen are patronized. I bought of an old-established firm, turning down the local nurserymen whose stock might have done just as well, but I did not want to experiment. If you buy from a big concern which has been in the nursery business for years it will be an accident if you don't get your money's worth. I have great confidence in American nurserymen as a class.

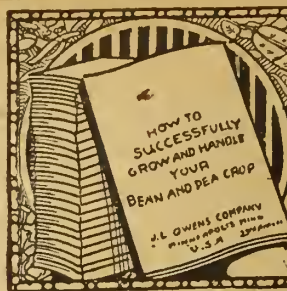

Do not be attracted by cheap prices for trees. The cheapest articles are not usually the best. When buying apple or other fruit trees it pays to get the best regardless of cost. Failure is very expensive in this business.

Secure catalog and price lists from several nurserymen and place your order in good season. It may be that the nurserymen can help you in the matter of selecting varieties. Consult them at any rate. In addition, write to your state experiment station and ask the horticulturist to give you what information he may have that will assist you. Having secured all the advice you can get handily, there is no reason to plant your orchard in doubt or uncertainty; plant it in confidence and firm faith that it will be a success. We prefer spring planting in the region wherein we have had experience. Autumn planting, however, is desirable in many sections. How the trees are set is often of more importance than when they are planted.

Although many extensive orchardists plant trees in small shallow holes, often times furrows made with a plow, I believe that where only a few hundred are to be set it would pay to make big, deep holes, say two feet square and eighteen inches deep, filling them with surface soil to an extent that would leave the trees inserted at about the same depth they grew in the nursery row.

Cut off any injured roots and when introducing the tree spread the roots so that they extend in all horizontal directions.

Cover with surface soil, making a slight mound about the tree, so as to prevent the formation of a water basin by the sinking of the dirt in the hole.

## We Breed 7 Varieties of SEED CORN

We raise every ear of corn sold by us for seed on our own farms. We cultivate 7 large farms; each of them produces a pure variety of seed corn. Our plan of cultivation insures your getting pure bred corn, the best varieties.

We have increased the yield of certain varieties from 35 to 90 bushels per acre on the same land. That shows what breeding will do. If you want some of that kind of seed corn send your name for catalog. We sell hundreds of bushels of seed corn to our neighbors annually; they tell us it is the best they can find anywhere. That's proof that our seed is what you want.

Box 16

W. W. VAN SANT & SONS

Farragut, Iowa.

## Seed Corn

Prof. Holden of Ames College, Iowa, told us Feb. 7th that he regarded Goddard's "Silver King White Dent" as a remarkable corn. One of the very best. We control 1906 crop of "Silver King" grown in this county (Winnebago) by the man who perfected and named "Pride of the North." Let us send you history of this wonderful corn. We grow all standard varieties. Sow Northern Grown Seeds. Get our catalog. THE ADAMS SEED CO., Decorah, Iowa.

The first three or four years small fruits and possibly potatoes and cultivated crops may be grown between the rows of trees, but as soon as the orchard begins to bear, the land should be given over entirely to the trees.

Cultivation should be persistent. A surface working tool is best for orchard work. Some implement manufacturers build several types of harrows especially adapted to orchard cultivation. In autumn a cover crop should be sown. Wisconsin. W. Stenson.

## DEATH TO GOPHERS AND GROUND SQUIRRELS.

The best time to rid your farm of ground squirrels, pocket gophers and prairie dogs is right now before the season is far advanced. No rodent on the farm is more destructive than these pests. They will destroy whole fields if not killed, and much of the seed will be removed by them before it has time to germinate. Many meadows are destroyed by pocket gophers and many orchards and gardens are despoiled by their ravages. The best way we know of to get rid of these pests is to use Gopher Death, manufactured by the Ft. Dodge Chemical Co., Ft. Dodge, Iowa. They sell 1,400 prepared tablets for \$1.25, and one tablet will do the work on each gopher. Gopher Death is recommended by the experiment stations, and thousands who have used it. It is the easiest and best way we know of to get rid of them. They also manufacture Ratocide Tablets, which is one of the best rat killers on the market. They sell it at 25 cents. If you are infested with these pests write for free illustrated circular, to the Ft. Dodge Chemical Co. It tells you all about the habits of these pests, and it will be sent to all, provided you mention this paper. See advertisement on page 10.

## THE STOCKMAN'S TELESCOPE—SPECIAL SIXTY DAY OFFER.

Kirtland Bros. & Co., Dept. H. F. W., 90 Chamber St., New York, are now offering their powerful telescope for farmers and stockmen at special prices. They ship this telescope well packed so there is no danger of its being broken in transit. The lens is scientifically ground and adjusted and guaranteed by the makers. The fittings and trimmings are neat and durable. Nearly every land owner has occasion to use one of these telescopes. They are the finest kind of an instrument for the hunter or at summer resorts where it is necessary to look at objects several miles away. At the price at which this telescope is offered, every one can afford to have one on hand. All you need do is to write them enclosing price. See page 20 and if the telescope is not just as represented your money will be refunded. Address them as above.

## FARM FOR SALE BY OWNER.

One of the finest farms, 1,260 acres in extent, in the Northwest is offered for sale elsewhere in this paper. This farm is situated in the southeast corner of North Dakota, two miles from Hankinson. 1,000 acres are under cultivation, the rest is in natural timber and meadow land. The water supply

## SEED CORN

## Golden West

The latest novelty, and decidedly the best yellow corn in existence. It combines all the most desirable characteristics. Is the best rooted, the strongest growing and most productive. Ear large, bright golden yellow, solid and perfect shape. Notice in above cut that ears are about the same size at both ends; see how nicely the kernels wedge in at both tip and butt, and how closely the kernels wedge in grain is deep and solid. Per bu. \$3.00, 10 bu. \$27.00. FREE TO FARMERS—A small sample of this corn will be mailed free if you mention this paper. Also a copy of our large, illustrated catalogue describing the above and all the best varieties Seed Corn and Farm and Garden Seeds. IOWA SEED COMPANY, DES MOINES, IOWA.

300 Plants \$1.00

100 of that choice new variety. Senator Dunlap and 200 of two other choice varieties, and printed instructions with each order on how to grow them. J. L. TODD & SON. BOX 9, WOODWARD, IOWA.

SEED CORN. Frank Large Yellow Dent and Reid's Yellow Dent seed corn for sale by H. P. Wilkinson, Mitchellville, Iowa.

LIVE STOCK SALES

Harding's Successful Short-horn Sale.

One of the largest gatherings of breeders in recent years was present at the fifth annual Short-horn sale of Mr. F. W. Harding, of Waukesha, Wis., on Wednesday, April 10th. The winnings of this noted herd have placed it in the front rank and the offering this year was up to the high standard which has always prevailed in former sales. Breeders were present from Manitoba and Kentucky and from the states intervening, and competition was keen throughout the sale. Col. F. M. Woods did the selling and was ably assisted by Col. Geo. P. Bellows. In opening the sale Colonel Woods called on Col. W. A. Harris and Assistant Secretary B. O. Cowan, who called attention to the increasing demand for good Short-horns. This sale is remarkable in many respects. The Hardings having been in the Short-horn business for nearly forty years, the breeding of Short-horns descending from father to son, and Anoka herd has not only maintained its high reputation for the excellent quality of its cattle, but each succeeding year has gained in favor until the high average of \$375 on forty-eight head passing through this sale emphasizes the fact that the present owner, Mr. Frank W. Harding, has not only been able to maintain the reputation of his father as a breeder, but gained additional laurels for the Anoka herd in making the highest price obtained in public sale this year. Mr. Thos. Johnson, of Columbus, Ohio, topped the sale, paying \$1,075 for the Scotch heifer, Lucy of Pine Grove 3d, a daughter of Missie Champion. Mr. Johnson secured two very good heifers in Missie of Pine Grove 7th at \$855 and a daughter of Marquis of Zenda and Mandolin, a beautiful Miss Ramsden heifer, at \$600. Mr. F. O. Lowden, of Oregon, Ill., was a competing bidder on the best lots and secured Zoe of Pine Grove 6th, a daughter of Marquis of Zenda, at \$600, Pine Grove Mildred 11th, another daughter of Marquis of Zenda, at \$800, and Imp. Princess Royal at \$620. Mr. N. A. Lind, of Rolfe, Iowa, secured Imp. Dum-Na-Glass Nonpareil at \$760 and Imp. Missie 159th at \$510. Mr. Geo. Allen, of Lexington, Neb., secured Bampton Crocus, a daughter of Imp. Banker, at \$790, with white bull calf at foot by Whitehall Sultan. Mr. Fred Ayres, of Athens, Ill., was fortunate in being the purchaser of Lily of Pine Grove 3d, a daughter of Village Champion, at \$700. The bull consignment was topped by the Flynn Farm Company, of Des Moines, Iowa, who secured the yearling show bull, City Marshall, one of the best sons of the noted champion, Whitehall Marshall, at \$900. Mr. Robt. Fallon, of Neponset, Ill., was the competing bidder and secured the yearling bull, Sultan Commander, a show calf, at \$655. Messrs. Carpenter & Ross being the competing bidders. A complete list of sales follows:

The Andrew County Short-horn Breeders' First Sale.

The first annual sale of Short-horn cattle made by the Andrew county Short-horn breeders, at Savannah, Mo., on April 2d, drew a few breeders from a distance, and if these gentlemen will continue their annual sales they can in a few years build up a trade that justifies the effort. The men who contributed to this sale are all energetic breeders and men who have the interest of the breed uppermost in their mind. They also have good cattle and their offerings as a whole were of the kind that merited every dollar they brought. Some few were offered in rather thin flesh and some were too young to bring what their owners possibly hoped

What "Blue Flame" Means

It means the hottest and cleanest flame produced by any stove. This is the flame the New Perfection Oil Stove gives the instant a lighted match is applied—no delay, no trouble, no soot, no dirt. For cooking, the

NEW PERFECTION Wick Blue Flame Oil Cook-Stove

is unequalled. It gives quick results because its heat is highly concentrated. Cuts fuel-expense in two. Made in three sizes. Every stove warranted. If not at your dealer's write to our nearest agency.

The **Rayo Lamp** is the best lamp for all-round household use. Made of brass throughout and beautifully nicked. Perfectly constructed; absolutely safe; unexcelled in light-giving power; an ornament to any room. Every lamp warranted. If not at your dealer's, write to our nearest agency.

STANDARD OIL COMPANY (INCORPORATED)

for. This cut the average to quite an extent. On the entire offering of forty-two head an average of \$76.65 was made. The top on hulls was \$250, paid by Mr. Chas. Sweet, of Filmore, Mo., for Cashier, the Cruickshank Violet herd hull sold by Messrs. R. A. Coffey & Son. Mr. Sweet made no mistake in purchasing this hull. The top on females was \$177.50, paid by Mr. Chas. Selgfried, of Amazonia, Mo., for Lot 11, a Young Mary cow and heifer calf, consigned by Mr. P. W. Hoshor. Colonel Bellows conducted the sale and did excellent work. Mr. H. R. Coffey, who managed the sale, also deserves credit for the work he took on in pushing this their first sale through to a successful end. Following is a list of all sales of over \$100:

The Daviess County Short-horn Breeders' Sale.

The sale of Short-horn cattle held at Galatin, Mo., on April 5th by the Daviess county Short-horn breeders was attended by but few breeders from any distance, and these from joining counties. The offering as in most combination sales consisted of some fairly good cattle and some that should never have been put through a sale ring. Farmers were never more discriminating buyers than at the present time and to get their cattle in presentable condition. On the entire offering an average of upwards of \$60 was made. The top of the sale was \$162.50, paid by Mr. Louis Best, of Pattonsburg, Mo., for Courtier's Best, a Clay-bred bull sold by Mr. T. A. Walls, of Jameson, Mo. Mr. R. E. Maupin, of Pattonsburg, Mo., took Nellie of Maple Hill at \$115 and Crimson Rose at \$125. Both are Scotch cows and were bought worth the money. Knight Watch, a roan yearling bull consigned by Mr. J. V. Goodbar, sold for \$127.50, to Mr. C. J. Feurt, of Pattonsburg, Mo. These were the only sales of \$100 or over. Col. Geo. P. Bellows did the selling and kept the ball rolling even under the adverse circumstances.

Clipper Lawn Mower THE MOWER

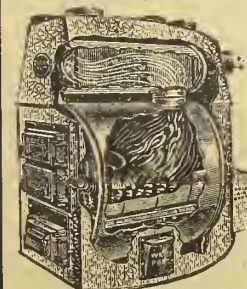

THAT will kill all the weeds in your lawn. If you keep the weeds cut so they do not go to seed and cut your grass without breaking the small feeders of roots, the grass will become thick and the weeds will disappear.

The Clipper will do it. Ask your dealer for them. If they have not got them, below is the price: No. 1-12 in. Mower, \$5; No. 2-15 in. Mower, \$6; No. 3-18 in. Mower, \$7; No. 4-21 in. Mower, \$8. Send draft, money order or registered letter. Mention 'The Homestead' when writing.

**STANDARD AND UTILITY.**

MONROE, IND., March 4, 1907.

WM. MICHEEL—DEAR SIR: The sitting of Light Brahma eggs, which I bought from you last year, were all right. We got fourteen chicks out of them. I took three cockerels and four pullets to the poultry show at Decatur and won 1st, 2d and 3d on cockerels and 1st, 3d and 4th on pullets. Send me price of eggs this year of Light Brahmas and Barred Rocks.

Respectfully, Michael Miller.

MONROE, IND., April 9, 1907.

WM. MICHEEL—DEAR SIR: I will send you a small order, \$3.00, for one sitting of L. A. Brahma eggs from same matings as last year, and one sitting of Barred Rocks. Am also sending you score card of two of my birds at the show at Decatur, Ind., one cockerel (score 93%) and one pullet (score 93%) being out one point on weight. Wick H. Hathaway, Judge. And then I didn't get a fair deal, as the president had everything fixed for himself.

Yours, Michael Miller.

Please look up my advertisement on page 15, and give me a trial. I can give you your money's worth.

POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

CONFINEMENT FOR FATTENING POULTRY.

This is a subject which has received a great deal of discussion during the last few years, and methods of fattening poultry have consequently experienced a great many changes. The fact that an animal or a bird at rest generally accumulates more flesh than one at liberty has led a great many poultry feeders to confine their fattening birds. It is generally known that in large establishments that make a specialty of this work the birds are crated so closely that they scarcely have room to turn around. The fattening operation where confinement is so close as this, of course, does not last more than a few weeks, and the result is that this "forcing" process makes very tender and plump meat.

A great many people are opposed to this method of fattening poultry. They maintain that this inactivity on the part of the fattening bird causes a stagnation of life processes which could not result in a fine-flavored, healthy carcass. It is argued, also, that if poultry are given some liberty they will have better relish for their food and consequently make better gains.

On the other hand, those who support the idea that close confinement has no unfavorable results on the carcass claim that the fattening period is so short that during that time a fowl maintains a keen relish for its food and the life processes in the body are normally active. It used to be common for farmers to allow their fattening poultry all the range they desired, and when it came to sell them they were simply driven into the hen house, crated and taken to market. However, the high prices of poultry have caused a great many to see a profit in penning up their fowls and bringing them to a higher condition before marketing. This is done by confining them in crates which allow them more or less liberty and could not in any possible way result unfavorably to their health if they are kept under any decent kind of sanitary conditions. It is quite likely that fowls may be closely confined if they are kept in clean quarters and given plenty of air, sunlight and water. Under these conditions a little ground feed will bring the poultry to a splendid condition and great gains can be made in a short time. It is probably safe to say that a little exercise is generally better for fattening than either close confinement or full liberty.

AN OLD NOTION EXPLODED.

The belief is quite common that geese will make a pasture distasteful and even harmful to horses and cattle. There is an old saying: "Geese destroy in front, and poison behind." That they destroy in front is true in the sense that they clip the grass and herbage much closer than any other living thing, literally leaving nothing for the other stock. This would be sufficient reason for cattle and horses to seek another pasture. There is no proof whatever that they interfere in any other way with the welfare of their grazing companions. They are as cleanly as any poultry, and their presence helps pastures ultimately by the amount of fertilizing material which they furnish. It is an unwarranted slander on one of the most profitable species of poultry, and one which should be vigorously refuted.

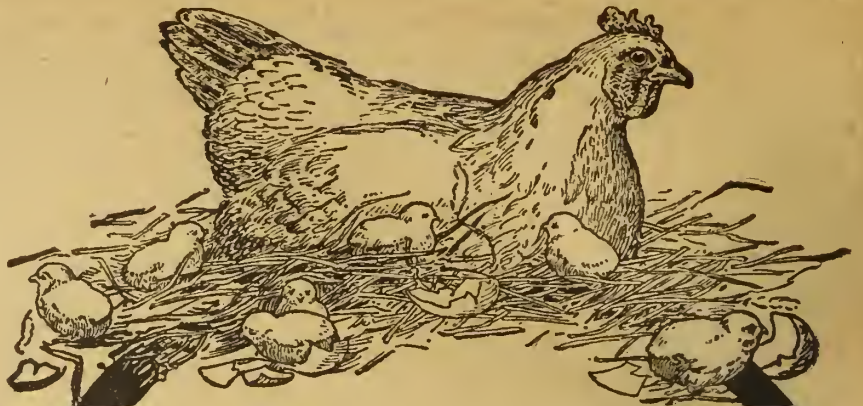

Feather Plucking.

To the Editor of The Homestead:

You forward me the following inquiry received from one of your subscribers at Harlan, Iowa:

Please tell me through the columns of your paper why chickens pull feathers from one another and eat them. Ours have been at it all winter. When a feather flies, all run for it. The plumage, of course, is injured by the habit. What is the cause and how may it be cured?

A great source of annoyance in the poultry yard is the habit that birds sometimes acquire of plucking the feathers out of one another and eating them. Sometimes the cock bird may be seen holding his head down and standing quietly while the hens pluck the feath-

How to Raise Young Chicks

The difficulties encountered in raising young chicks are numerous. Disease and lice are said to destroy nearly 50% of the annual poultry crop. Errors in diet and unsanitary conditions also help to decrease the poultry profit. But you do not need to suffer these losses if you will give poultry half the care you give other stock. Besides

DR. HESS POULTRY PAN-A-CE-A

is guaranteed to prevent and cure gapes, cholera, roup, indigestion, etc., allaying fermentation and destroying the germs of disease. By its special tonic properties it increases the powers of digestion and assimilation and compels the system to appropriate the maximum amount of food to egg production, also making the young grow fast, healthy and strong. Besides increasing growth and egg production Dr. Hess Poultry Pan-a-ce-a has special curative properties peculiar to itself. Take no so-called poultry food as a substitute. Remember that Dr. Hess Poultry Pan-a-ce-a is the prescription of Dr. Hess (M. D., D. V. S.) and bears the endorsement of leading poultry associations in the United States and Canada, and is sold on a written guarantee. It costs but a penny a day for about 30 fowls. Feed Poultry Pan-a-ce-a as directed, sprinkle Instant Louse Killer on the roosts, nests and into the dust bath, and we guarantee you will have no loss from disease.

DOGS.

PATS! My Scottish Terriers will make them dig. Very fine puppies, males \$10, females \$7; pedigree with sale. Bred bitches \$25. Registered and expert raters. S. W. Harr, Riverside, Iowa.

ers from his head until it becomes bare and often streaming with blood, or, in other instances, the hens will be noticed picking feathers from each other until they are almost naked. Whether the fowls are intended for the show pen, for table purposes, or for egg production, feather-eating is a most unpleasant practice to contend with. One bird will learn this trick from another, so that if it is allowed to go on all the yard will speedily acquire it.

Cure is nearly hopeless when it has gone far. As a rule, feather-eaters are more often found in small confined places than when the birds have a large grass run. Various reasons are given to account for this troublesome habit. Over-feeding or a diet of too stimulated a nature, insufficiency of animal food, an inadequate supply of sulphurous food, thirst, want of occupation—all these and many others are among the supposed causes. Where the poultry in small yards have been fed with too stimulating a diet the blood becomes ever-heated and irritation ensues, consequently the bird picks itself to secure relief and the practice travels to the other fowls. Want of sulphur is a very usual cause of this bad habit, for sulphur enters largely into the composition of feathers. Fowls when they have a free range obtain a quantity of sulphur from weeds and other vegetable food, particularly from the seeds of plants, also from beetles and other insects which they find in their wanderings. But poultry in confinement are debarred from this.

Another likely inducement to feather-eating is want of occupation. When cooped up in close quarters the birds have little to do after they have had their meals. They sit huddled up close together and for amusement they peck

The Reliable's 25th Birthday

**GREIDER'S FINE CATALOG 1907** tells all about pure-bred poultry and describes 60 varieties, 10 beautiful natural color plates. Gives reasonable prices for stock and eggs; how to cure diseases, kill lice, make money. This valuable book only 10c. B. H. Greider, Rheema, Pa.

HAWKEYE LICE KILLER

Will absolutely rid your fowls of mites and vermin. Best deodorizer and disinfectant. Send for descriptive circular. Sample gallon can, 75 cents. Hawkeye Chemical Co., Drawer H, Knoxville, Iowa

at one another's plumage until they acquire a taste for feathers.

As soon as this disease is noticed the offender should be removed from the others and fed on a cooling diet, with a good allowance of green food. When there is feather-eating it is well to give the fowls some sulphur, about a tea-

A Scottish terrier, such as are owned and bred by Mr. S. W. Harr, of Riverside, Iowa. See advertisement on this page.

spoonful in the soft food to every three fowls twice a week. Give employment to fowls by scattering their feed in the litter. If none of these suggested remedies are of any avail it is better to kill the culprits. B. F.

Be careful what your hens eat. Food flavors the egg. What kind are the hens getting? Fish, onions, or manure piles are certainly not conducive to good flavor.

Unless a poultryman has a good stock of patience, perseverance, pluck, enterprise and capital, he will have a hard road to travel.

### \$300,000,000 in Eggs.

The busiest spot on the face of the earth is Uncle Sam's farm, and the busiest thing on the whole busy ranch is the Great American Hen. Biddy's joyful cackle begins on the New England coast at sunrise; follows the morning light across the prairies of the middle West, and ends only at the "jumping off" place—the Golden Gateway to the Pacific. Every five years Biddy doubles her business. Think of that—twice as many eggs, chicks, fowls, in 1905 as in 1900, and this year will probably show a total credit to Biddy's industry of about \$300,000,000. What is the rest of Uncle Sam's barnyard doing to compare with that showing? There's no mistaking a patent fact—Biddy "cuts the ice," and the American farmer and his hustling wife are getting "wise" to the fact. Everywhere the land is dotted with chicken coops and hen yards. The man with a farm, the man without a farm, and the suburbanite, have all gone into poultry, and those who put brains in, too, are getting dollars out. This kind of people, hundreds of thousands of them, keep fowls in a healthy and prolific condition the year round by feeding Dr. Hess Poultry Pan-a-ce-a, which gives the fowl in confinement, by perfect digestion and assimilation, the same elements she would find for herself if at liberty. Careful study and experiment under just the conditions that the average poultryman finds in his own yard, led Dr. Hess to the gradual perfecting

of his Pan-a-ce-a. It is not a stimulant, and should not be confounded with preparations of that class. It does not excite unnatural production only to leave the hen exhausted and unprofitable. Rather, it makes a hen natural under unnatural conditions, by supplying iron for the blood and nitrates to help nature in throwing off poisonous matter, so that "tone" and vigor are given the whole system, and disease eliminated. It is easy to see from this how important Poultry Pan-a-ce-a is to the hen man. Dr. Hess & Clark, of Ashland, Ohio, are so sure of its positive merit that they cheerfully give a guarantee with every package. All they ask is that you use it according to directions. If you do and occasionally sprinkle the roosts, nests and fowls with Instant Louse Killer your success in poultry culture will be large. It costs but a penny a day to feed it to thirty fowls.

### POINTERS.

—Barred Plymouth Rock eggs from exhibition birds are offered for sale by Mr. W. W. Scholes, of Onawa, Iowa. He is pricing these at \$2 per fifteen.

—White Wyandottes exclusively. That is what Mr. A. J. Podendorf, of Logan, Iowa, breeds, and he is selling eggs from his best matings at \$1.50 for fifteen or \$2.25 per thirty.

—Mr. Henry Olerich, of Rolfe, Iowa, is prepared to furnish readers of The Homestead with White Leghorn eggs at a very low price. His advertisement appears on this page.

—Eggs from prize-winning Black Langshans, scoring as high as 94, are offered for sale by Mr. W. W. Baskerville, of Earlville, Iowa, whose advertisement quoting prices appears on this page.

—Mr. J. E. Wright, of Pleasantville, Iowa, advertises eggs from Single Comb Buff Orpingtons, \$1 per sitting, \$5 per 100. See advertisement on this page. Write him and mention The Homestead.

—Mr. Arthur T. White, of Red Oak, Iowa, writes he is offering eggs from heavy, thrifty birds which are well marked; they are barred to the skin. See his Barred Plymouth Rock advertisement on this page.

—Barred Plymouth Rock eggs from the leading strains and from large birds are offered for sale in this week's issue by Mr. J. E. Wehr, of Portsmouth, Iowa. He is

pricing these at \$1 per sitting, or \$4 per 100.

—Messrs. Aye Bros., of Blair, Neb., are offering Barred Plymouth Rock eggs of the Bradley and Norval strains for sale at \$1 per fifteen or \$4 per 100.

—Mrs. A. H. Klepper, of Muscatine, Iowa, breeds Light Brahmas, and in her advertisement on this page she is offering eggs from her farm range flock at very liberal prices.

—Mrs. W. P. Miller, of Allison, Iowa, can supply readers of The Homestead with Barred and White Plymouth Rock eggs at prices named in her advertisement appearing on this page of The Homestead.

—Mrs. L. C. Reece, of Prescott, Iowa, has one of the best flocks of Barred Plymouth Rock chickens in southern Iowa. She is now shipping eggs and will be pleased to hear from any of our Homestead readers.

—For eggs from fine Barred Plymouth Rocks which score as high as 92½, and mated to choice cockerels, write to Mr. H. I. Anestad, of Slater, Iowa. He quotes prices on this page. Mention The Homestead when you write him.

—Mr. Elmer Carty, of Delaware, Iowa, raises White Plymouth Rocks exclusively. He has a fine flock, and readers of The Homestead will make no mistake in ordering eggs from him. See advertisement on this page.

—In changing their advertisement of geese, Mr. H. M. Almy, Greenwood, Neb., writes that they have a nice quantity of eggs on hand from Mammoth Toulouse geese and White Wyandotte chickens. Orders filled promptly. Write and mention The Homestead. See this page.

—Mrs. A. H. Graham, of Alexis, Ill., writes that her White Wyandotte eggs which she is selling this season are fertile; that she has had good hatches from them and that her chickens are in the best of condition and are laying well. She considers her breeding stock very good. See advertisement on this page.

—The advertisement of Mr. O. J. Viland, of Slater, Iowa, breeder of Barred Plymouth Rocks, offering eggs for sale, appears on page 16 of The Homestead. Mr. Viland writes that his strain of Barred Plymouth Rocks are especially strong in color and size. The mother of the cock heading his pen was first hen at the Chicago show in 1905, while two of the hens mated to him were in the first pen in the same show. Mr.

**EGGS** for hatching, S. C. Buff Orpingtons, \$1.50 per 15; Golden Buff Rocks, \$1.00 per 15; \$5.00 per 100. Mrs. G. R. Fuller, Route 4, Rolfe, Iowa.

growing nicely and that she never saw a healthier lot.

—Mr. J. L. Slick, of Lanark, Ill., writes: "The Barred Plymouth Rock eggs I am offering are from high-scoring stock and of the best strains known to the breed, and are very excellent layers. I have bred these exclusively for twenty years and never had better ones." See advertisement on page 15.

—Mr. R. T. Cameron, breeder of Light Brahmas exclusively, Ottumwa, Iowa, writes: "My stock was scored by Mr. W. S. Russell. Pen 1, cockerel, from the yards of Mr. Philander Williams, of Taunton, Mass., scores 94, standard weight; the hens and pullets score 93 to 95%. Eggs \$3 per fifteen, \$5 per thirty. Pen 2, cockerel, score 93%, standard weight; elegant shape; hens and pullets score 93 to 95. Eggs \$2 per fifteen, \$5 per forty-five. Can fill orders on Short notice." See advertisement on page 15.

—Mr. W. R. Warwick, of Montezuma, Iowa, writes that he is still prepared to fill orders for choice Barred Plymouth Rock eggs at the prices quoted in his advertisement on this page. He succeeds in satisfying his customers with a high percentage of fertile eggs and this should warrant our readers in sending in their orders freely to this breeder. He writes that out of one hatching of 210 eggs, all were fertile but fifteen. Undoubtedly these eggs will stand on their own merits. Write him for free circular and kindly mention The Homestead.

—Mr. W. S. Gregory, breeder of purebred White Wyandotte chickens, whose advertisement appears on this page, writes: "The Homestead is bringing us good returns, but we could handle more business. Our eggs are hatching extra well this year, and we are getting plenty of them, so we can ship out fresh eggs on short notice. Our White Wyandottes are first class in every respect. They have full range, thus insuring eggs that will hatch strong, vigorous chicks. Those who send us their orders will be treated fair and honestly, and get their

money's worth. That's the way we do business." Mr. Gregory's address is Keota, Iowa.

—Eggs from pure Black Langshan hens, mated to vigorous, healthy cockerels scoring as high as 94%, are priced by Mrs. H. Osterfoss, of Hedrick, Iowa, on this page. Her fowls are large-boned, vigorous birds and the price which she is quoting should move her offering quickly. Kindly mention The Homestead in your correspondence.

—We insert the advertisement of Mr. H. D. Cameron, of Montezuma, Iowa, on page 15 of The Homestead. He is offering Silver Laced Wyandotte eggs for sale from 92-point birds. The prices which he quotes are very reasonable for stock of this quality, and we would suggest that those in need of eggs write him and get their orders in early.

—We direct special attention to the advertisement of Mr. William Michael, Box 130, Lawler, Iowa, found on page 15. Mr. Michael is offering Silver Laced Wyandotte eggs at \$1 per fifteen and \$2.50 per fifty, and also special matings of Light Brahmas and Barred Rocks at \$1.50 per fifteen. The two testimonials which constitute Mr. Michael's advertisement this week are taken from a number furnished The Homestead and indicate the character of the stock from which Mr. Michael is selling eggs. Those desiring to come into possession of something good in any of the three breeds mentioned cannot do better than send Mr. Michael an order. You will be more than pleased with what you receive.

#### WHITE WYANDOTTE EGGS.

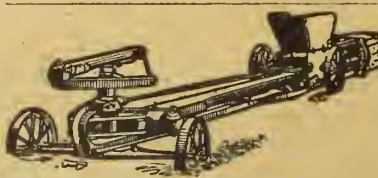

Mr. Roy Stacy, of Rochelle, Ill., the well-known breeder of White Wyandotte chickens, has a new advertisement on page 15 of this issue which will interest readers of this paper. His birds have been personally selected by him from a flock which produced the birds which won the following prizes: At Chicago, 1906, won first pullet, second cockerel on three entries. At Chicago, 1907, first pullet, second cockerel, third cockerel on three entries. Has any other breeder

### EGGS FOR HATCHING

from high scoring Rhode Island ducks at one dollar per ten eggs. Address, J. H. Horwath,

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

CULLING THE FLOCK.

In these days when dairying is being agitated freely throughout the middle West, we hear much of the unprofitable cow, and that it is essential to weed out the unprofitable cows if one is to realize paying returns on his investment. In the same way will the successful flock-master weed out the poor ewes in his flock, thus gradually increasing the average quality of his band of ewes.

We speak of this matter now because during the lambing seasons and following weeks is one of the best times to note the individuality of the ewes. The value of the ewe depends finally on two things: The pounds of wool she will shear and the lamb she will produce. As to the amount of wool produced annually, it is little trouble to weigh the individual fleeces at shearing time, and all sheep not coming up to a desired standard may then be marked, later to be put on the market. A notch in one ear will serve to identify them always.

But at this season of the year is the time when the usefulness of the ewe as a mother may be determined. You

should be well enough acquainted with your flock to know each animal from the others. Now at time of parturition notice whether a strong lamb is produced and if the ewe has come to and through the ordeal in good health. Ewes weak in constitution and vitality will show it more at the lambing season and immediately following than at any other time. Watch the ewes to see which ones are the poor milkers. You will soon be able to tell them by their lambs. Any ewe, ordinarily, that will not give milk enough to raise a lamb well should be discarded as soon as practicable, for the difference between a strong, well-grown youngster, and a poor, scrawny, ill-fed one is the difference between profit and loss. Some ewes are poor mothers, too, because they do not care for their lambs; they are disposed to disown them, and are nervous, fidgety, etc. Such ewes are undesirable for many reasons, and generally lose their lamb at birth if the shepherd is not immediately at hand.

A ewe that is a good milker, or a good nurse, caring well for her lamb is not always the desirable ewe to retain. In the sifting out process much attention should be paid to form and constitution, as well as breed characteristics if you are maintaining a pure-bred flock. Good form and good constitution usually go hand in hand. Keep the wide, deep-bodied ewes with deep, full chests and lots of heart and lung room. Also pay attention to the head and neck. It has been said that a good head is worth little to a butcher, but worth much on a sheep. A full, muscular neck indicates strength and constitution, also good muscular development throughout. Mr. Ellman, the founder of the Southdown breed insisted on the importance of this point.

In building up your flock, remember that it can't be done in one or two years, but each year tells. An English writer expresses it thus: "Cut off the tail and put on a new and improved head each year."

KEEP THE FLEECES CLEAN.

It goes without saying that a clean fleece always sells better than a dirty one. It is natural that when wool goes to the commission merchant he should discriminate against a fleece that is full of straw and dirt in favor of one with no better quality of staple, but free from foul matter. This is a common experience among men who shear and sell wool. We know it is a very difficult matter to prevent the flock from collecting more or less dirt in their fleece, for they are quite apt to stand around and rub against the straw pile or hay stack if they are allowed to do so. We have known sheepmen who were so careful to keep the fleeces clean that they would not even allow one to carry a forkful of hay through the flock. They were generally well rewarded for their care with fine, bright fleeces at shearing time which brought several cents a pound more than those of their neighbors' who had been less careful.

The difference between the price of a dirty fleece and a clean one, even though both be of the same quality of staple, may be only a few cents. However, when one thinks of the gain that is made on the whole flock it amounts to considerable. Of course it is quite a nuisance perhaps to keep the sheep from rubbing against stacks, and it may seem often as if the work which it required to keep the flock in pens separate from that of the stock cattle was hardly repaid by the gain that is secured from the improved condition of the fleeces. It is a common practice to feed roughage to the flock in low racks rather than to allow them to pick their roughage from the stack. The racks should be low enough so that hay from above will not drop down into the fleeces when the sheep are feeding.

The plan of keeping the fleece just as clean as possible is one that is practiced by all good sheepmen. If you have not been in the habit of doing the same, just try it from now on and see what a nice bunch of fleeces you have this spring, also if you do not get a better price for your wool than you ordinarily do, making allowance, of course, for the market changes.

Nodular Disease in Sheep.

To the Editor of The Homestead:

One of the commonest causes of disease among sheep is the presence in the intestines of a parasite that produces nodular disease. The symptoms observed when sheep are infested with this para-

### A TON OF HAY

taken into the mow or on the stack at three sling loads. That's not only fast work but nice clean work. No litterings whether you are handling hay, straw, fodder, or bound grain.

## The Louden Hay Sling

drops your hay flat just as it lay on the load.

Can be used either double or triple draft and with either right-angle or parallel pulleys.

Saves half the work of mowing away.

### DIRECT FROM MILLS

WE PAY THE FREIGHT

## BEACON-ITE

LONG-LIFE ROOFING

No matter whether you have a well equipped hen house or use a shed for this purpose, either requires a good roof. Although the hen may keep a picking when it rains, she is not a water fowl. She needs some dry place to go when she wants to.

To raise chickens successfully a water-tight roof on your hen house is absolutely necessary. You can put Beacon-ite long-life roofing on any of your buildings yourself and it will remain absolutely water-tight for years. It will cost you about one-half the price of tin or shingles and will outlast either. Thousands of farmers are now using it on all of their buildings.

Remember that we only sell direct from the mills to you, thereby saving you dealer's and jobber's profits. We pay all freight charges. Write to-day for our FREE samples.

### THE OLD RELIABLE Anti-Friction Four Burr Mills.

DOUBLE THE CAPACITY OF OTHER MILLS.

TWO-HORSE mill has 25 ft. Grinding burrs all grinding at once and grinds from 25 to 50 bu. per hour. Four-horse mill has 30 ft. of grinding burrs and grinds from 60 to 80 bu. per hour.

30,000 Bu. With One Set of Burrs.

I have used a Mogul No. 1 mill for seven years and it has ground with one set of burrs more than 30,000 bu. of corn and the burrs are still in good condition. F. F. Craig, Mt. Carroll, Ill.

Absolutely no friction or gearing. Will earn cost price in three days. The largest ears of corn to these mills are like pop corn to other mills. We manufacture the most durable and fastest grinding line of mills sold, including our Famous Iowa No. 2 for \$12.50. **Bayce Grinder & Furnace Works, - Waterloo, Ia.**

site are a loss of appetite, the animal begins to run down in flesh and stands around in a drawn-up manner, evidently feeling ill. Scours often occur also, and when scours appear the animal is generally badly infested. It gets poor rapidly and often dies. Upon investigation internally, the lining of the intestines will be found to show knots or nodules of varying size and of a yellowish white color. These are what give rise to the name of the infestation and are caused by the worm encysting itself in the intestinal wall to pass a resting stage in its life cycle.

One of the reasons why this parasite causes so much trouble is the difficulty of combating it. The eggs are dropped in the pasture and adhere to the grass blades; thus the infection comes through eating the grass tainted in such a manner. The egg hatches after being taken in the intestinal tract, burrowing into the wool only at a certain period in its life. To remove the worms from the intestines before burrowing period, any good vermifuge or worm powder may be used, but there is no method of dislodging the worm from the nodules. The best recourse is to feed well at all times on palatable food, as the sheep seem to endure the presence of the worms if they (the sheep) are in good flesh; but once a sheep runs down from this cause it is hard to get it back again.

Much can be done to avoid infection by change of pastures, especially with lambs, putting them on fresh pastures over which old sheep have not grazed. A plentiful supply of salt will keep the bowels laxative and cause the expulsion of most of the worms if infestation does occur.

Story county, Iowa. Ellis Rail.

### LAW HAY TOOLS

In your barn are a guarantee that your hay will go into the mow in quick, clean shape.

LET us send you circulars describing our **Sure Trip** carriers, **Safety Lock** slides, **Cable End Door** fixtures, **Detachable** hay racks, etc. Our door fixtures can be put on an old or new, hip or straight roof barn. ## OUR HOME DEPARTMENT.

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 727, Kansas City, Mo.

## WITH THE EDITOR.

In view of the fact that the great majority of our readers are interested in poultry as a source of income it has been decided to give the Home Department space almost entirely to poultry this week. The articles presented in this poultry symposium record the actual experiences of practical persons. They thus have a value which will doubtless commend them to progressive readers.

Notice is hereby given that, in the late autumn, there will be a prize contest for articles recording helpful poultry experience, either success or failure.

## A POULTRY SYMPOSIUM.

## TURKEYS AND CHICKENS AS MONEY MAKERS.

Mrs. F. H. Slife, Central City, Iowa.  
I have raised poultry for ten years, and have failed one year out of ten.  
That year I had a drove of fine turkeys ready for market when they got the cholera and died.

I think I can make the most money raising turkeys. They are harder to raise than chickens, but one turkey is worth three or four chickens. The way I have the best luck with turkeys is to set the first laying under chicken hens and set as many at once as I can for they will do better if all of one age. If you have them of different ages you will have to keep them in separate pens as the older ones will run over the younger ones and kill them. When the little turkeys hatch I pick out hens I think will make the best mothers, "for you can't raise turkeys with a wild or cross hen," and put about fifteen turkeys to a hen.

I have a good yard away from the chickens, for turkeys will not do well close to chickens, and you want your yard good and tight for it is hard to keep little turkeys with hens at first.

And you want to be sure and have good, clean, dry coops for a turkey's worst enemies are wet and lice. Insect powder is good for lice and give them ashes to dust in.

For the first two weeks I feed them soaked bread and put in lots of red pepper; mustard is also good. Give them milk to drink with a few drops of carbolic acid in it. After they are two or three weeks old I make corn bread for them.

Another important thing is to feed them often, but not much at a time.

I have an incubator to hatch chicks with.

## "Buffalo Calf" Shoes

## WEAR

Very Much  
Longer  
Than  
Others

Prove it  
Try "Buffalo Calf" Shoes. One pair will prove to you that they are the best shoes made to stand the hard knocks of all kinds of work. Good shape enough too for everyday wear. Fit comfortably, as you can get just the shape you want. "Buffalo Calf" Leather is strong—flexible—easy on your feet, and stands water better than other kinds. "Buffalo Calf" Shoes are stitched with stronger waxed thread—more rows of it—than other shoes. Made all through on the "square deal" principle for practical men by practical men. Ask your dealer for them. He ought to have them as most dealers have them. If he hasn't—write us a postal. We'll mail you a Free "Buffalo Calf" Leather Test-Tag and tell you how to get a pair promptly. Then you'll see what "Buffalo Calf" Shoes are like.

TOWER'S  
FISH BRAND

Made for all kinds  
of wet work or sport  
SOLD EVERYWHERE

A. J. TOWER CO. BOSTON, U.S.A.  
TOWER CANADIAN CO. LTD. TORONTO, CAN.

I keep about one hundred and twenty-five hens and I sell lots of eggs besides raising a big drove of chickens each year. I think an incubator a fine thing for you can keep your hens laying.

There is money in raising capons, at least if you have close neighbors so you can't raise turkeys. A person could make more money with chickens by having them caponized.

## A SUCCESSFUL EXPERIMENT.

Mrs. K. D. Fields, Tyro, Kansas.

To begin with I had a small flock of just mixed-up chickens and no special breed, but healthy and clean stock. I bought a pen (four hens and one cockerel) of pure bred chickens and kept them in a small portable pen, twelve feet square. This was moved onto fresh ground twice a week. A goods box with two roost poles did for sleeping quarters. I fed and cared for them so well they kept in good condition and gave a good harvest of eggs. The mixed hens hatched the chicks and raised a fine flock of thoroughbreds. I sent a pen to the state poultry show and won a premium besides getting score cards showing I had raised 96 point pullets. Then I advertised in our state poultry paper offering eggs for hatching and made quite a reduction if parties ordered three or four sittings at once. I studied poultry literature and packed the eggs carefully, thus pleasing my customers and often sent a few eggs extra, also guaranteed a fair hatch.

I had a good stone half-basement poultry house, built on a sunny hillside, made the perches about twenty inches from the floor all the same height, thus avoiding bumble foot or fighting for the tallest perch. I sweep this room once a week at least and sprinkle wood ashes under the perches. The sidewalls are plastered with lime mortar and no vermin find a place for breeding and robbing me of the profits, and the hens are healthy and do not often go on a strike when eggs are high. In autumn I have a patch of wheat or cheat drilled for winter greens, and use kafir corn for the first feed, wheat or scalded oats for the midday meal, corn for five o'clock feed. I also give potato parings well cooked and mixed with bran and table scraps, also milk, and they require plenty of water, and broken dishes or glass and crushed shells and meat scraps.

## HOW I HAVE MADE MONEY ON POULTRY.

Mrs. A. Austin, Hutchinson, Kansas.

As I have had a little experience with poultry, I thought perhaps I might write something that would help some one as the chicken season is now at hand.

I have the Buff Plymouth Rock. I like only one breed at a time. Don't say that the above named breed is the best, but can say they have done well for me. Last year I sold \$25 worth of chickens, used all we cared to eat for a family of five and have two dozen young pullets, too, for this year and I only had nineteen hens. Of course, I thought most of my eggs.

How and where I set my hens.—I never set them in the same house where they roost or lay, as it breeds lice and mites, and they get on the wrong nests and break so many eggs. I have an old cave to set my hens in. You can set them earlier, as it is ever so much warmer than a building. Mine is cemented sides and floor. It wasn't made for this purpose. My husband works by the month and has not time to help me much. The cave is an old one and I thought I would try it and like it so well I will try again. I have always been told where there is a will there is always a way.

I set them in boxes in winter, line the box with several layers of papers and fill with clean straw. I gather my eggs in early to prevent them being chilled. Always set smooth, hard shelled eggs. I prepare my nest and eggs and in the evening I get Mrs. Biddy, carry her gently and put her on the nest and give her one egg and if she sets over night on that egg she deserves more and she gets them. I set more than one at a time and give the chicks to as few hens as possible and set again. If need be a hen can set twice easily with feed and water kept near. Keep a bucket and shovel and carry out the refuse, and change nesting every time. Let them out every few days to exercise, sprinkle with insect powder to kill lice so there will be none to cover the chicks when hatched, as prevention is cheaper than cure. Put moth balls in nest, and coarse salt sprinkled in box will keep bedbugs out. Don't feed as soon as hatched. Avoid sloppy food and not much water at first. Don't let mother hens out early mornings. Don't chase or throw at your hens; keep gentle by being kind and feeding well. And when Biddy has a little flock and you wish to catch her and put her out of the rain sprinkle down a little food and she will come to you.

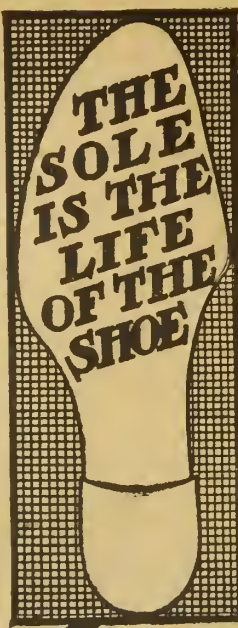

Keep a box of coarse sand, a shallow box of dust sand with insect powder sprinkled in to wallow in; whitewash everything used around poultry, adding kerosene and carbolic acid to the wash. Scald roosts with strong salt water and with an old paint brush apply kerosene and lice. Mites and bedbugs will flee from you.

To get eggs in winter.—Keep hens warm and dry. Brown or cook all grain foods. Never go out and throw grain to poor cold chickens, that makes your fingers ache while you are feeding it. Give them scraps from the table soaked and warmed in milk, feed regularly; warm the water and milk in cold weather and give clean straw to scratch in. This is the way I have attended to mine and I have only thirty-four hens and I have sold eggs all winter, always getting from nineteen to twenty-five cents, and think I am paid for my trouble as I have made quite a few much needed dollars with my chickens.

## VALUABLE EXPERIENCE.

Wm. C. Young, Fontana, Kansas.

We have been handling poultry for eight years. We moved to Kansas in the spring of 1896 and commenced with a dozen Brown Leghorn hens and a rooster. We raised seven or eight dozen pullets and sold almost enough eggs to keep us in groceries, but there were only two of us in the family. We bought us a little farm of eighty acres that fall. We also bought the poultry on the farm, giving the owner twenty-five dollars for \$100 Plymouth Rock hens. We took pos-

"All Solid Everywhere—Not Shoddy Anywhere."

The soles of KIRKENDALL SHOES are made from Oak-Tanned Leather.

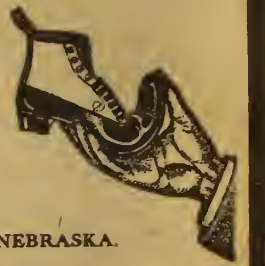

Only the very best oak-tanned and slaughter leather is used, and it is not tanned by the short, quick acid methods so commonly used by many tanners.

Where but a short time is needed to tan leather by acids, it is a process of months to produce oak-tanned leather, and oak-tanned leather is the old-style, original bark-tanned leather. It is the best leather obtainable, and is vastly more durable than ordinary tannage.

## KIRKENDALL'S ELECTRIC WELT SHOES

Are made for those who want foot comfort; for people tired of ordinary footwear; people who want their shoes to look well, wear well, and retain their shape. They are the most flexible, comfortable shoes on the market. Thoroughly reliable western-made shoes, will withstand all reasonable wear.

Your dealer undoubtedly has KIRKENDALL SHOES, in all leathers, lasts and sizes. Ask him. If he has not, he can get them for you. Send us his name and address.

## Cancer Cured at Home

I have so perfected my Mild Combination Treatment that patients may use it at their home with as good results as though it were applied at my offices. I will gladly furnish to every sufferer positive and indisputable proofs that my treatment does cure Cancer. I will furnish ample evidence of my integrity, honesty and financial and professional ability. No matter how serious your case may be—no matter how many operations you have had—no matter what treatments you have tried—write for my book, "Cancer and Its Cure." It will cost you nothing and will tell you how you can be cured at home. Address,

DR. O. A. JOHNSON, SUITE 371, 1233 GRAND AVE., Kansas City, Mo.

Have you a friend suffering from Cancer? Do them a favor they'll never forget by sending them this ad

session the first of December. By the tenth of May the hens had to their credit \$52 in eggs. We gave the hens no special care as we did all the farm work ourselves and they got their attention just like the rest of the stock.

They paid the grocery account and gave the wife half cash as she always did the marketing.

We did not try to raise many, just enough to make plenty for the table and to keep the flock up in young hens to two hundred and fifty in number.

I am no poultry fancier, making nothing particular of a high score, only a full egg case. I keep the above mentioned breeds, letting them run together.

Some claim every point for one breed, but I find in eight years experience that the Plymouth Rocks and Brown Leghorns are about a tie and it is the plump hen that lays.

We have some trouble with sick birds, but comparatively little. Parched corn in the morning and charcoal pounded, where they can pick at it when they please is about all the remedies we use. For lice and mites holling water does the work the quickest of anything we can do. I thoroughly scald the hen house every six months and it seems to eradicate them. I generally use an old wash pan, put a little lime in the boiling water and dose it out to them by the pan full.

Hiding in the cracks does not do them any good. It gets too uncomfortably hot for the old ones and the nits are hard hollid. I like the cross between the Brown Leghorn and Plymouth Rock. They look like the Brown Leghorn and their size is more desirable. The half breeds are the best hens I have, but do not let the flock pass the half breed line. We find it cheaper to get eggs for incubation from parties keeping good scoring birds. We dispose of our roosters about the first of April as we think sterile eggs are better.

We never take a stale egg to market as it is simply wrong. Our groceryman thinks well of us and we stay right with him. He never looks at a case of eggs we take in and gives the wife half cash and then we have a nice balance on our side.

We have a little boy now seven years old. We give him ten cents a week to watch for nests and help gather eggs. He has fifteen dollars earned and to his credit.

## A NATURAL HEN INCUBATOR.

By Sarah M. Cliser, Barnard, Mo.

I am one who does not use an incubator. I have what we call a natural hen incubator or a place to set hens, where each hen has her nest separate and no other can bother her. She can't get out only to get food, drink and sunlight, and then goes back into her own nest. I have places fixed for eighteen hens in this way. If a hen wants to sit in a good place where nothing will bother her, all right; if not, I put the eggs in one of the incubator nests, then after dark I slip Biddy on them. I always wait until I have several, and set all at once, the more the better. Sometimes I take off one hundred and fifty little chicks all about the same time. I take them all from the hens, turn the hens out to rest up and begin laying again, and rear the chicks by hand, as I have a small chicken house for that purpose, eight by ten with two-thirds of the roof sloping to the south, part of the roof being double doors, with the window sash set in just below the doors so when you open back the double doors the sun shines through the glass and makes it very cosy for the little fellows. Then I have a small yard around the house with a wide board at the lower side and netting on top. On nice days I turn

them out in the yard, but had days keep them up, and if it is cold and damp, I have a stove in their house, and keep a fire for them. At night I put them in boxes and cover with old pieces of carpet. They will be warm and nice in the morning; after they are two weeks old they can huddle up together in the corner on some straw and be all right. When they first hatch I don't feed them anything but dry oat meal and give water to drink for at least four days. After I have what I can care for nicely I let

the rest run with the hen putting about two hatchings with one hen. I keep about sixty hens over winter and to raise from. I usually sell from sixty to seventy dollars worth of chickens and twenty-five to thirty dollars worth of eggs. We use about seventy chickens on our table in a year.

#### INCUBATOR EXPERIENCE.

Nettie L. Kizer, Woodbine, Iowa.

Last spring I had very poor success with my young chicks, and the mid-summer found but few on the place.

Disappointed, but not entirely discouraged I began to plan some way to increase the number. I thought of my neighbor's incubator which she had used in the spring and set aside for another year. Just the thing to do the work with neatness and dispatch, thought I.

The incubator was procured and set with 180 eggs. It was then the latter part of July, a time in the year I think, when many eggs are infertile.

We intended to follow the directions sent with the incubator, implicitly and did so with the exception of turning the eggs as often as directed.

We found it difficult to regulate the temperature. The temperature to be maintained was 103 degrees, but at night it would sometimes get as low as ninety degrees and in the heat of the day it would persist in getting too warm. Several days I blew the light out two or three hours at a time.

One day the thermometer registered 107 degrees, and another time stood at the alarming figure of 110 degrees.—I had been away calling on my neighbor.

Well, I supposed every one of those eggs were nicely roasted, but I set them out to cool at once, then broke one to see if it really was cooked; it did not seem to be, so we kept on trying to regulate the ups and downs of that thermometer.

In due time the eggs began hatching and it was certainly interesting to watch and care for those downy chicks. I did not have more than 50 per cent of a hatch and of that number several were weak and soon died; some of them seemed grown to the shell and would die shortly after being removed; this was caused I think by not turning eggs often enough. Nevertheless, there were 70 strong, healthy, active, little chicks, and we were pleased with them and proud because they were hatched in an incubator. My experience taught me that in managing an incubator, as in doing anything else, one must exercise one's own

judgment somewhat; that to test out infertile eggs would save disappointment when hatching time arrives; to turn eggs often as directed; to use moisture as directed if incubator is sitting in a room where atmosphere is dry; not to go visiting and stay away too long. In spite of my seeming failure I am a friend of the incubator and hope to own one of my own some day. I'm sure I could do a great deal better next time because,—well, you know the proverb.

#### EXPERIENCE WITH AN INCUBATOR AND WHAT IT TAUGHT ME.

Mrs. Emma Barron, Blue Lake, Mo.

My few years' experience with an incubator has taught me the machine has an advantage over the hen. The incubator is ready whenever you are and chicks that are hatched in the machine are free from vermin. The hen will not become broody until she gets ready and one at a time, so one has a very few early chickens for the best market. To raise early broilers for the market one needs a good sized incubator. To have success will take time, attention and experience.

I have a two hundred egg incubator and will give rules by which I run my machine: keep machine in warm room, without draft on it, level machine, fill tank with warm water and draw off a quart. Adjust regulator and light lamp. Start machine empty and run at 103 degrees, for one day and night. Now select the best shaped eggs and ones that are not chilled; fill trays, place thermometer in farthest tray from lamp and continue running at 103 degrees, the first two weeks and at 104 degrees last week. Begin turning and cooling eggs on fourth day and continue until nineteenth day. Turn morning and night with hands, also changing trays to opposite sides and filling lamp. Cool once a day. A little longer each day until at the last about one-half hour. While cooling take trays out and close doors to machine. If the eggs get a little too hot I cool them and they are never over-heated. During the last few days the temperature may run up, but do not lower, as it is only the life of the chick. Start machine with ventilators about half shut and close a little, gradually, but not entirely. If the weather is damp you will not need much moisture. On the nineteenth day put a little warm water in moisture pan above thermometer. Begin testing on sixth day, just a few every three or four nights. A clear, transparent egg is an infertile one while one with a red spot is a dead germ and those with red veins like a spider and cloudy looking at the large end are living germs. Leave chicks in nursery twenty-four hours with the temperature the same. Do not feed for same length of time, feed three times a day and give plenty of water. After a few days turn chicks out in their yard and have loose dirt so they can scratch for themselves, which you will soon learn they can do without the old mother hen.

#### ABOUT SHIPPING POULTRY.

Mrs. Florence Gerbracht, Kelley, Iowa.

Ten years ago on an Iowa farm I began to raise chickens. I had very good success hatching and raising them, but, oh, my! when it came to selling, four and five cents per pound. I soon discovered the pocket book did not fill very fast. I also knew from experience there was more money in poultry than prices stated, being born and reared in an eastern state where we had access to good markets, etc.

I decided to patronize my old home commission, and the last seven years have been dressing and shipping my poultry to a firm in Philadelphia, Pa., perfectly honest and upright in their dealings and a reliable firm; without exception every year have doubled my money, shipping to them. My ducks have averaged me \$1.00 apiece beside selling the feathers for forty cents per pound. The first of February I shipped the said firm four old roosters which netted me eighty cents apiece. That heats ten cents had, the price paid here.

Annually the buyers with a broad grin call to buy my poultry. I treat them kindly, but tell them I want all there is in it. Last fall a buyer lectured an hour to me, but he did not purchase my poultry. I realize there are people who believe in nothing but home trade, but I sincerely think if there is any one that should have the middleman's profit, it's the farmer's wife, who has toiled, rain or shine, from March until June, hatching and raising poultry. Now if any of the farmers' wives want to make more money with poultry, my advice is, raise all you can of Barred Plymouth Rocks, Pekin ducks and Mammoth Bronze turkeys, dress them from November to March and ship them yourself, thereby get all there is in it. Some think they have a white elephant on their hands, when it comes to picking a duck or chicken dry, but the more you pick the better you will like it. If any of the readers desire further information on the subject I will gladly give it.

#### SELLING EGGS.

Mrs. Fannie Eland, Arapahoe, Neb.

I make my money by selling eggs. I keep from 100 to 125 hens, Leghorns and Plymouth Rocks mixed. I think cleanliness one of the most important things to be looked after, for without that they cannot have health. I whitewash the hen house two or three times a year with lime in which has been put coal oil or carbolic acid to keep away mites, etc.

And frequently I take boiling water and scald the nests and perches or any place where mites might be. The droppings should be cleaned away at least twice a week, and every morning is better.

Warmth in winter is another essential. This winter we have cane-fodder, which was cut and bound with corn binder, standing on end around our hen house and it keeps them a great deal warmer.

More attention has to be paid to their feed in winter than summer, for then the variety outside is more plentiful. On winter days I give warm water to drink, then I scatter two or three sheaves of wheat over the floor and two or three quarts of thrashed wheat. I leave them in till about ten o'clock or if quite cold, till two p. m. Then let them out for exercise. For their evening meal I save all scraps from the table, all potato peelings and cabbage leaves, chopped

## A Shady Transaction

If anybody sold you some lumber and if upon careful examination you discovered that it was really not solid timber but merely short pieces spliced together you would call it a shady transaction. That is about the kind of a proposition you are up against when you buy cut stay fence.

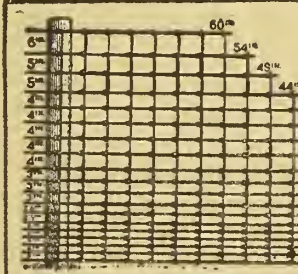

It's really not a first-class, full strength product. About half of its strength is wasted—sacrificed to convenience and speed in manufacture. Our stay wire is NEVER cut. It runs continuously up and down across the fence for many rods without an end, thus preserving and utilizing ALL the strength and service there is in the wire.

**30 Days Approval.** Let us prove to you that Advance Fence is the best made fence on earth. We offer to ship you all you need on 30 days approval. We want you to examine it carefully and compare its construction with other fences. You may stretch up a part or all of it and turn your stock against it. In fact give it any kind of a test you wish.

Then we will let you be the judge—absolutely. If you do not like it send it back and it won't cost you a cent as we will pay freight both ways and refund to you every cent you paid. We know that Advance Fence will please you or we would not dare make this liberal offer.

**We Prepay Freight** and guarantee safe delivery of shipment. You take no risk whatever. Write for our Free Fence Book and Prices.

**Advance Fence Co.,**  
34 Old St., Peoria, Ill.

### THE "DENNING" FENCING IS FAMOUS

For its "Peerless Tie" close mesh, strength and durability. Our motto is "not how cheap but how good." Yet our prices are as low as any compared with weight. We use the best galvanized steel wire. Our hog fence is superior. Our poultry fence beats the world. Our lawn fence is ornamental. Our slat corn cribs and steel grain bins are popular. Ask your dealer, or write us for catalogue.

THE DENNING WIRE & FENCE CO. : : Cedar Rapids, Iowa

My lamp-chimneys break through abuse—not through use.

My Index tells how to get the right size for your lamp. It's free; let me send it to you.

Address, MACBETH, Pittsburgh.

### CYCLONE THE FENCE BEAUTIFUL

We build ornamental fence that looks well, and is as good as it looks. Strong steel wires, crimped and interwoven with cables so none can get out of position. Choice of several styles for Lawns, Public Buildings, Churches, Parks, Cemeteries. Our catalog will interest you.

Cyclone Fence Company, Waukegan, Ill.

#### Anchor Fence

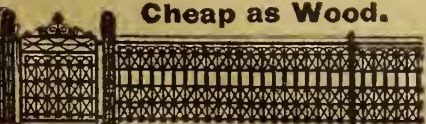

Combines strength and beauty with long life. Large, hard steel wires. Heavily galvanized.

FARM AND ORNAMENTAL

Handsome, easy to build, always stands erect. Ask for Fence Book 13. ANCHOR FENCE & MFG. CO. Cleveland, Ohio.

### DON'T RUST FENCE

40 Carbon Spring Steel. Extra heavily galvanized. No Agents. 30 days free trial. Farm and Poultry Fence, Catalogue No. 140. Also 40 Styles Lawn Fence, Catalogue O. Catalogue Free. Write for one or both. THE WARD FENCE CO. Box 404, MARION, INDIANA

### A SPEEDY WIRE STRETCHER

The Automatic Steel Lever Stretcher draws 40 rods of wire tight in one pull, and always past end post. A daisy splicer and staple puller. Prepaid \$1.25. Illus. booklet free. Agents wanted. OTTO SCHWIEN, Box 204, Davenport, Iowa.

fine. These mixed with one and one-half gallons of warm water and thickened with bran make a good supper, which I feed the year round. They relish onions chopped fine and fed by themselves. Nothing is better to make hens lay than meat. I feed all soap-grease to them. During summer I do not feed the old ones except the bran mash. They have the run of the farm. I have never tried other poultry than chickens. Last year I sold \$10.77 worth of chickens and \$110.92 worth of eggs, a total of \$121.69 with a small investment and not much very hard work. I think success in poultry can be summed up in these five essentials: first, cleanliness; second, warmth in winter; third, variety of feed; fourth, plenty of clean water; fifth, a love for your work.

#### Dressmaking and Millinery, No. 565.

Sylvia Silverthorne, Muscatine, Iowa.

(All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor to the editor of the Home Department.)

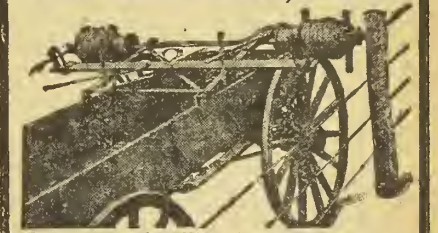

Stage favorites have much to do in the way of popularizing certain types and modes of dress, and some of these are to be especially noted for their simplicity. In 5637 is shown a waist design that is a close copy of the

[5637—Shirt Waist or Blouse, 32 to 40 bust.]

one worn by Margaret Anglin the past winter, and which promises to be a close rival of the "Peter Pan" costume described in a former number. And so of course, if not everybody, then "nearly everybody" will have in her wardrobe an "Anglin" waist. Quite simple are the lines on which the waist is constructed, the deep pointed yoke and the ample collar that is open slightly below the throat being its distinguishing features. The full fronts are especially favored by the

### Farmers and Stockmen, Attention!

No danger handling barb wire if you use the Stark Combined Wire Reel and Stretcher (patented). It is just the thing for building new barb wire fences and for rolling up barb wire if you wish to remove any old fences. This machine is placed on a wagon box and fastened thereto with clamps by two bolts, without any injury to the box, and one man in the seat driving the team can roll up more barb wire without scratching his hands or tearing his clothes than twenty men could do by hand, and it is rolled up on spools in just as good shape as new wire coming from the factory, and can be used again for building new fences. For building new fences two spools can be placed on the machine and be unrolled at the same time as fast as the team can walk, and the wire is stretched by the same machine. For further information write to C. W. STARK, - MOUNTAIN LAKE, MINN.

### The Iowa Gate - FOR THE FARM -

By sliding this ring back the largest hogs may pass under

**AND** have the run of two lots. Or raise your gate to drive hogs through, then your larger stock cannot get out. RAISING THE GATE is simple enough but very handy your gate swings on uneven ground or when the outer end drags.

IOWA gates will raise up for winter use—are not bothered by wind, rot, or fire. Are easy for women to handle but strong enough for any stock.

CHEAPER THAN WOODEN GATES and will outlast a dozen. Write today for our circular.

IOWA GATE CO. 9TH ST. CEDAR FALLS, IOWA

slender women, the exceedingly broad-shouldered effect given by the shape of the yoke being also in her favor. Yet since this broadness of shoulder line is one of the season's "trade-marks" the type will be adopted even by those who do not complain of slenderness. While the waist is shown made up in the

most simple manner it is well to note its possibilities if something more elaborate is desired. Frillings, bandings or embroidered edges may finish yoke, collar and cuffs, as well as the tiny flap on the pocket, for whatever mode of decoration is chosen should be carried out on all the edges. Piping, braid-

[5622 Seven Gored Skirt, 24 to 36 waist.]

ing, or most beautiful of all, embroidery done on the material are other modes of finish that may be suggested. The collar in either outline shown affords a charming

background for an embroidery design, and in a diminutive copy of the same the cuffs and pocket could be decorated. For those who would object to the open neck let me suggest a tiny shield either with or without a band collar. Or one or two of the small shirt waist bar pins may be used to catch the collar at one or two points. The pattern provides for elbow or full length sleeves. The tie worn is one of the smart modes and may be made of silk or wash materials, but of course this is not part of the pattern. It is simply a bias strip of material hemmed on all edges. Pattern 5637 is cut in sizes for a 32, 34, 36, 38 and 40 inch bust measure.

The plain seven-gored skirt does not lose its favor even though there are numbers of pleated and gathered designs. For many materials the plain gored model seems best adapted, and too, nothing is a better choice when much trimming is to be applied. 5622 is graceful in its proportions, fitting snugly about the waist and flaring gracefully at the foot. As a foundation for a flounced or ruffled skirt the design is especially suitable. Braiding or embroidery done in a pattern will trim the skirt prettily. Many of the designs for either of these is repeated at top and bottom of each gore, those at the top being diminutive copies of those at the foot of the gore. Many of the linen and pique skirts are made and trimmed in this manner, and these are easy to launder if the ironing is done on the wrong side, using a well-padded ironing board. Pattern 5622 is cut in sizes for a 24, 26, 28, 30, 32, 34, and 36 inch waist measure. Note carefully these sizes. It is seldom I can offer a skirt pattern cut in the large sizes, those cut in 34 and 36 being especially scarce. Give size when ordering pattern.

Send eleven cents in money (not stamps), for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

## PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range  
Among the pleasant fields of Holy Writ  
I might despair.  
—Tennyson.

The International Sunday-School Lesson.

Second Quarter. Lesson III. Genesis XXXVII, 5-28, April 21, 1907.

### Joseph Sold by His Brothers.

The inevitable and grievous consequences of polygamy were upon Jacob. Even the blessing at Jabbok could not avert, though it may have mitigated them. That experience, no doubt, made the patriarch more patient and just under his extremely trying circumstances. But his home, if it deserved the name of home at all, was rent with jealousy. Four wives and four sets of children kept the camp in pandemonium. . . . Under the most favorable circumstances the rearing of twelve sons is an onerous task. At the very time Jacob should have been giving his undivided attention and strength to it, he seems to have been chiefly engaged in outwitting Laban and accumulating a fortune. The result was, he had a lot of unruly, wicked boys on his hands, who made his name unsavory among the inhabitants of the land. . . . On the dark background of this polygamous household the pure and artless character of Joseph emerges with most pleasing effect. He was the son of Jacob's later and better days. He was taken away soonest from the degrading influences of Padanaram. He was chastened by the greatest grief that can befall a young heart, a mother's death. The very frequency and completeness with which his

surroundings changed was calculated to cultivate the devout and dependent spirit. . . . From the thorny and thistly sons of Jacob grapes and figs could not be expected. The extreme cruelty, especially of Simeon and Levi, had already shown itself in the case of the Shechemites. All were rude, treacherous Bedouin. The gentle and pure character of Joseph was a standing stricture upon them. They were envious of his impending honor; ready to cry as their descendants afterwards did: "We will not have this man to reign over us." They nursed their jealousy until it reached the size of murder. . . . Joseph had come to them on an errand of love from his father. It was a long and perilous journey from Hebron to Dothan. There were Bedouin and bears in the way. He had brought his brothers goodly viands. If there was to be any criticism of their conduct on his part, direct or indirect, it would be just, and for their real advantage. But they allowed themselves to be moved with envy. Their utter heartlessness is shown in that they could sit down to the very banquet he had brought them, and eat it in sound of his wailing voice. . . . Amos compassionately refers to the "sufferings of Joseph." They were pitiful, unparalleled. He was treated with indignity; stripped of his

robe of state; taunted with his dreams; cast into a demijohn-shaped cistern, from which escape was impossible. There, in the mire and clay of a horrible pit, he shivered for want of his cloak. He was a-hungered and weary, with no place to lay his head. He was treading the wine-press of sorrow alone, and of his brothers there was none to help him. At length he is lifted from the pit, but only to suffer a worse fate. . . . There is an expulsive power in a new vice as well as in a new virtue. Murder is ousted by avarice. The sight of the approaching trading caravan suggests the possibility of making merchandise of this obnoxious brother. A moment later they gloat over their two silver shekels apiece, and see their kinsman, according to the flesh, depart to ignominious and hopeless servitude. . . . Naked and under a burning sun, with an iron collar about his neck and a lash upon his back, the heir of all the promises departs from the very land he was to have inherited. The prince is metamorphosed into the slave, Canaan exchanged for Egypt. From the human angle all is lost; but

"God moves in a mysterious way,  
His wonders to perform."

### Analysis and Key.

1. Evil of polygamy illustrated in Jacob's family. Pandemonium.
2. Jacob busy getting a fortune—sons neglected—result.
3. Joseph on background of polygamous household. Son of Jacob's better days. Soonest removed from pagan environment. Chastened by mother's death.
4. Character of Joseph standing rebuke to his brothers. Nursed their jealousy.
5. Opportunity afforded by Joseph's visit to camp. Expulsive power of a new vice. Murder vs. avarice. Joseph sold a slave.
6. Defeat in appearance only.

### The Teacher's Lantern.

This fascinating story is a thin veil through which the most cursory reader must catch a glimpse of the character and work of Jesus. A greater Father sends His greater Son. It is an errand of love and mercy. He brings bread and wine, emblems of his own sacrifice and oblation. He comes to His own, but His own receive Him not. He is sold at the price of a slave. He is shockingly humiliated; smitten and mocked; stripped of his robe; put to a slave's death; entombed; but now He appears upon a throne of glory to give redemption to all—as many as will believe upon His name. Thus is Joseph one of the most striking types of Jesus. Joseph's rescue would have been the greatest possible misfortune. For himself: to have been reared in Canaan by his fond father would have made a Lilliputian of him. For his nation: Egypt was to be their schoolhouse, and Joseph's captivity was the means of bringing them there. This does not discount the brother's crime. God made their wrath to praise him, and the excess of it,

which would have murdered the heir of the promises, he restrained.

A reverse! so it seemed when the heir-apparent to Israel's throne became a slave. But whether an event is a reverse or not depends upon what God means by it, and the use man makes of it. If Joseph had become a man-hater, and spent his time bewailing his confessedly hard lot, his going a slave to Egypt would have been a reverse. On the contrary, he triumphed over untoward circumstances. By his industry and fidelity he made himself indispensable to Potiphar, the prisonkeeper, and finally to Pharaoh himself.

A little span the triumph of evil covers at best. The malignant brothers are in fine feather over making away with the object of their enmity. They are glad they will see the face of the dreamer and "reporter" no more. But in a score of years they are fulfilling the dream, and bowing timorously before his blazing throne. The wicked spread themselves like the bay, but suddenly they are not. Malice is impotent when it rears itself against Providence.

That fine coat! How soon it was stripped off! Joseph was just as good and great without it. It is character, not clothes, that wins.

Reuben was imitating Jacob in finesse. He expected to get his brother out of the hole. But the success of neither father nor son in cunning is sufficient to encourage imitation. Reuben's kindly feeling toward his rival is commendable; but perhaps if he had courageously withstood his brothers, it would have been a case where one consciously in the right would have put nine, consciously in the wrong, to flight.

A further hint of Joseph's character is found in the descriptive phrase, "A child of the old ones." He had an old head on young shoulders; preferred the company of his elders; spent much time, no doubt, with his grandfather Isaac.

As in his father, so in him, there may have sprung up the ambition to inherit the primogeniture; unlike his father, however, he took no unworthy means to help Providence secure the desired end.

The primogeniture passed from the first son by Leah to the first son by Rachel. To attest the fact, Jacob put an uncommon and lovely robe of state upon the heir apparent. With the zeal of a reformer, the embryo priest and ruler at once reported to his father the uncomely acts of his brothers, only with a view to having them amended. He was aggrieved that the fair name of the holy nation should be tarnished by such sins. He felt that the very perpetuity of the tribe, and all the oracles of God committed to it, were imperiled.

### CHEAP RATES TO THE PACIFIC COAST.

Commencing March 1st and continuing until April 30th the Iowa Central Railway will have on sale reduced one-way tickets to Arizona, California, Oregon, Washington, British Columbia, Utah, Montana, Idaho and Old Mexico. Rates \$15 below regular fare. On Wednesdays through tourist cars to Los Angeles and San Francisco are run via Kansas City and the popular Santa Fe System. Call on agents for particulars, or address A. B. Cutts, G. P. & T. A., Minneapolis, Minn.

### SPECIAL 60-DAY OFFER TO INTRODUCE OUR LATEST LARGE, POWERFUL ACHROMATIC TELESCOPE, WITH SOLAR EYE-PIECE

FACE TO FACE WITH THE SUN!

See the Spots on the Sun

NEEDED ON FARM, SEA OR RANCH. BY MAIL INSURED, \$1.20

POSITIVELY such a good telescope was never sold for this price before. These Telescopes are made by one of the largest manufacturers of Europe, measure closed 13 inches and open over 3 1/2 feet in 6 sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold from \$5.00 to \$8.00. Every sojourner in the country or at seaside resorts should certainly secure one of these instruments, and no farmer should be without one. OBJECTS MILES AWAY are brought to view with astonishing clearness. Sent by express for \$1 safely packed; if by rail insured, \$1.20. Our new catalogue of Watches, etc., sent with each order. This is a grand offer and you should not miss it. WE WANT each Telescope JUST AS REPRESENTED or money refunded. WHAT A TOURIST SAYS: NEW YORK, Nov. 4, 1905. Messrs. Kirtland Bros. & Co. GENTLEMEN: I had with me on my recent European trip one of your Excelsior Solar Telescopes, with which I had the pleasure of observing an Eclipse of the Sun. At the Austrian Tyrol it was almost 80 per cent concealed. Your Solar eye-piece is a great thing. Its value to me on this occasion was many times greater than the entire outlay for the Telescope. Yours truly, L. S. HENRY.

KIRTLAND BROS. & CO., DEPT. H.F.W. 90 CHAMBERS STREET, NEW YORK

ADVERTISING NOTES.

Ginseng plants are offered for sale by Mr. L. H. Wright, of Le Mars, Iowa.

Northern grown seed corn, sold under the Holden test, is offered for sale by the Gateway Nursery & Seed Corn Co., of Le Mars, Iowa.

See keepers' supplies of all kinds are offered for sale by the Leahy Manufacturing Company, of Omaha, Neb. Write for their free circular.

Three hundred thousand red cedar trees are offered for sale by Messrs. Garland & Fowler, of Afton, Iowa. They are the largest growers of red cedars in the United States.

The man who grew and exhibited the champion ear corn in the contest of 1904 and again in the contest of 1907 has still some choice seed corn for sale. His advertisement is on page 12. Address Mr. D. L. Pascal, of De Witt, Iowa.

A fine stock of shoes and drygoods is offered for sale in one of the best agricultural and manufacturing cities in the state of Iowa. The stock is new and in good shape. Anyone interested in this offer should address their letter to A. F., care The Homestead. See page 13.

Readers of this paper who wish to secure a very low price on White Standard Granulated sugar should consult the advertisement appearing on page 13 of this issue, of the Ames Wholesale Mercantile Association, of Ames, Iowa. For six cents in stamps, your name and post office address, they will send their grocery price list, giving full directions as to how to obtain sugar at \$1.95 per hundred.

The Brewster-Jones-Callaway Land Co., of Plainview, Texas, advertise 200,000 acres of choice land in the shallow water belt of Texas. This is in a good agricultural region and those looking for land in large or small amounts can be satisfied. This company wish to have a reliable agent in every

community. Write them for further particulars. Kindly mention this paper in your correspondence.

A 320-acre farm of good crop producing capacity in South Dakota is offered by Mr. C. B. Powers, of Pukwana, South Dakota. The farm is near town, has some improvements and is advertised on page 22. Kindly mention The Homestead when writing for further particulars.

It is never too late to buy good seed corn. Better wait a day or two and be sure you have good seed than to try to rush the planting and not know what you are putting into the ground. Mr. John W. Dawdy, of Abingdon, Ill., advertises Reid's Yellow Dent seed corn for sale at \$1.25 per bushel. This has been shelled from ears that have been tipped, nubbed and tested and at that price should certainly be taken quick. See page 12 and kindly mention The Homestead when writing. NO MORE SORE NECKS OR SHOULDERS.

The Humane Horse Collar, manufactured by the Humane Horse Collar Company, 1929 South Thirteenth St., Omaha, Neb., meets a long-felt want. A free illustrated circular, telling you about it, will be sent to every reader of this paper, provided you mention The Homestead when writing. Every farmer should know about this twentieth century collar.

YOUR LAST CHANCE THIS YEAR TO GET 300 CHOICE STRAWBERRY PLANTS FOR \$1.00.

Messrs. J. L. Todd & Son, of Woodward, Iowa, say for three weeks yet they will send 300 choice plants for \$1.00, 100 of the new Senator Dunlap and 200 of two other choice varieties, with a book of instructions on how to plant and grow them. Don't wait. Send now. Their advertisement appears on page 12, and will not appear again this season.

FINE FARM FOR SALE CHEAP.

Any reader of The Homestead who is in the market for a good farm should read the advertisement of Mr. Arthur G. Black, of Kansas City, Mo. Mr. Black owns a 320-acre farm in Anderson county, eastern Kansas. He is an attorney and never farmed a day in his life. He wants to sell this farm and he will sacrifice it. He has set a price much below its market value and this place will make someone a fine home and whoever buys it will get it cheap. Look up the advertisement on page 23.

BOVEE'S HOT AIR FURNACE.

Exceptionally low prices are now being offered on Bovee's Hot Air Furnace. This system of heating is claimed to save 40 per cent on the coal bill. If you install your furnace now you will be prepared to keep the house warm when cold weather comes. This company use the return circulating radiators and hot blast ventilation apparatus in their heating system. Catalog, blanks and specifications will be sent free. Address Bovee Grinder & Furnace Works, of Waterloo, Iowa. See page 13 for advertisement and kindly mention The Homestead when writing.

THE SOLE OF YOUR SHOE

may be made of paper, cloth, artificial leather or genuine oak-tanned sole leather. Think of the significance of the fact. You probably pay nearly as much for shoes with paper soles as you do with genuine leather soles, yet one pair of the latter will outwear a couple of the former. In other words, \$4 invested in a well-made, oak-soled shoe like the Kirkendall Electric Welt shoe, will give as much returns in wearing quality as \$6 or \$7 will if invested in cheap-made footwear. Then the difference in satisfaction. A Kirkendall made shoe always looks well, wears well and lasts well. Always a source of satisfaction. It is the shoe that you will put on when you want comfort. They are flexible, that's why. Made of live material. That's what the maker tells us, and his word

is reliable. We are going to ask you to try a pair next time you have shoes to buy. Your dealer should have them. If not, send his name and address to F. P. Kirkendall & Co., 1101-1105 Harney St., Omaha, Neb. See page 18 and mention The Homestead when you write.

ANCHOR FIRE INSURANCE COMPANY.

It is always a pleasure and satisfaction to The Homestead to speak a good word for any deserving Iowa industry. In fact, it is due to the patriotism and loyalty of every Iowa citizen to stand for good home concerns. The Anchor Fire Insurance Company is one of the solid, successful Iowa companies. Its showing for the past year was gratifying to their management and friends. For the first quarter of this year, their large gains in good Iowa farm insurance exceeds anything in the history of the company, and merits the patronage of Iowa farmers and business men. This is strictly an Iowa company for Iowa people. The Homestead insures in the Anchor and recommends it to our patrons and friends.

DR. WILLIAMS' LIBERAL OFFER.

Dr. T. F. Williams, the specialist of catarrhal affections of the head, bronchial tubes, nose, throat, stomach, etc., announces a very liberal offer—to give free one month's treatment. This offer the doctor makes for the sole purpose of convincing you that he will positively cure catarrh. In order to prove to every person afflicted with catarrh in any form that his treatment will effect a cure even though other remedies have failed, he is willing to stand the expense himself for the first month's medicines. He will also send his free illustrated book, "Catarrh and its Cures." The doctor gives each patient personal attention and will make a diagnosis of your case and give an honest opinion without charge. Call or write him. His address is 408 Flynn Bldg., Seventh and Locust Sts., Des Moines, Iowa. Read his Free Treatment offer on page 22.

FIFTY YEARS AT IT.

Fifty years ago the present Howe Scale Company, of Chicago, Ill., was in its infancy. At that time there were few farms equipped with scales for weighing the produce of the farm. The makers of the Howe scale saw the need. They made the best scale possible. It met with success. Each year there were improvements made and now after fifty years of experience in making a reliable farm scale the Howe Scale Company are in the best position to put out a scale that possesses all the desirable points in scale construction and utility. The farmer who buys a Howe scale can feel assured that he is getting full value for his money. The company's past record is the best recommendation that we can refer our readers to. This firm stand ready as always to give their old and new customers a square deal in the highest sense. Write them for scale advice, mentioning The Homestead.

WICHITA CASHIER NOW ENJOYS PERFECT HEALTH.

The institution of Drs. Thornton & Minor, of Kansas City, Mo., has received some wonderful testimonials. Among them is the following from a Kansas hanker: "Wichita, Kan., Oct. 9, 1905. Drs. Thornton & Minor. Gentlemen:—I desire to state that the treatment you gave me last winter for a fissure has been very successful. I am entirely cured and enjoying excellent health. I cannot commend your methods too highly, both as to treatment, uniform kindness and consideration of your patients, and your eminently fair proposition of requiring no compensation until patient is cured. Assuring you of my sincere appreciation, I beg to remain, Very respectfully, C. W. Carey, Cashier National Bank of Commerce." Drs. Thornton & Minor have been successfully treating piles, fistula and other diseases of the rectum for thirty years. If any reader of this paper suffers from such diseases they should write immediately to Drs. Thornton & Minor.

WANT A BUFFALO CALF?

One of the most novel and interesting tests offered by any manufacturer to prove the quality and wear of shoes is made by Messrs. Bentley & Olmsted Company, "The Western People," of Des Moines, Iowa, who make the famous "Buffalo Calf" shoes, so well known throughout the West. Every pair of Buffalo Calf shoes has a test tag attached to it, which is in the shape of a small buffalo calf, and stamped from the actual leather which goes into the uppers of the shoes. Dealers almost everywhere carry Buffalo Calf shoes, but if any of our readers do not happen to find these general durability shoes, if they will just write for one of these interesting tags it will be mailed free if you will just say that you are one of our readers. They will tell you also how to get their Buffalo Calf shoes promptly, and all about why they are the best shoes for practical men, and stand the hardest knocks and more wear—besides being most comfortable and of good shape for everyday wear. If you are able to tear the little buffalo calf tag with your fingers, the manufacturers will send you a pair of shoes without cost to you. Try it.

CANADA LANDS.

Just over the northern boundary, about seven miles is the beautiful and thriving village of Estevan, Saskatchewan. It is the home of about 700 enterprising people who have gone there because they were well aware of the promise for a bright future for that country. It has many large establishments, chief among which is the brick industry. The clay for the brick is of the finest quality and is found just above a vein of the finest coal in that part of that section. Think, the clay for the brick and the coal for burning them comes from the same hole. A second large concern is the Nels Mikkelsen Land Co., whose advertisement appears on page 23 of this issue. About six years ago the gentlemen who form this company purchased all the land in this section that they possibly could. Now, during that brief six years it has trebled in value and the prospects for the future are for a corresponding great increase. Up to the present time, none of this land has been for sale, but now they are offering it at wonderful bargains. The land is rich and will produce crops of grain equal to land twice its value in other places. If you are planning on investing a portion of your means, investigate this country, and write the Nels Mikkelsen Land Co., Estevan, Saskatchewan, Canada, for their homeseeker's guide. They are not simply agents, but own this land, and will take great pleasure in answering any questions you may ask. They will also send you the paper published at Estevan free, for a short time. Mention this paper.

That Look of Newness About the Farm

produced by the use of Pure White Lead Paint is not only a source of satisfaction to the owner, but it has a definite cash value as an asset and as a protection.

When you want to sell, you can get a better price for a well-painted house, wagon or implement.

And when you don't want to sell, the protection afforded by Pure White Lead Paint means longer life to your property, a saving on repairs and replacements, and greater satisfaction in ownership.

The Dutch Boy trade mark found on the side of a keg is a guaranty that it contains only Pure White Lead made by the Old Dutch Process.

MEN WHO ARE SICK!

Or suffering from some Weakness or Nervous disorder, Kidney or Bladder Troubles, Blood Poison, Varicocele, Hydrocele, Pelvic, Urethral or Prostate troubles, Skin Diseases and Rectal Troubles.

Can Consult Us Free

Call and see us or write us about your case we will make a careful examination and diagnoses free of charge. Tell you whether your case is curable, how long it will take, etc.

We will also gladly explain our method of treating chronic diseases. A method that has accomplished hundreds of cures. In many instances after every other known source of relief had failed.

If you have had any of these discouraging experiences, have paid out your money without having obtained the results you wanted, and have become skeptical and doubtful as to whether a cure is possible for you, we ask you in justice to yourself and us for the opportunity of proving to you that our treatment is different from anything you have tried and that it is what you need to get well.

We want to demonstrate this to you. Prove in such a manner that it will cost you nothing if the demonstration fails.

If perfect health and strength is important enough to you to warrant calling on us or writing us about your case we will gladly meet you half way and show you how you can be cured quickly and permanently.

Our methods of treatment are scientific and successful. It pays to consult the best first. We made our reputation here in Des Moines. We refer you to any Bank in this city. Write for our Free Book if you cannot call. This book tells all about the various diseases, the cause and cure.

Consultation free and invited either by mail or at the office. Everything strictly confidential.

## DAY BY DAY

Agricola

Surely the churning of milk bringeth forth butter, and the wringing of the nose bringeth forth blood. This was written some 3,000 years ago with no attempt at explanation.

Sometimes Agricola wonders if it would not be well for modern wise men to omit explanations, and then again he wishes more of them would explain—make plain—the relation of cause and effect in the actual affairs of life. It has been known for three centuries why blood escapes from the nose when the capillaries are ruptured, but the "churning of milk" is yet a mystery. Explanations have been suggested, but not with convincing clearness.

There are rural schools with the grounds adorned with shrubs and flowers. The crocus is a wonderful preacher of the beauty of punctuality; the tulip, lily of the valley and hyacinth are revivalists which never offend the sense of propriety.

And there are some schools where the pupils bring ears of seed corn selected by themselves, and they are subjected to a thorough germination test. The delights of nature study, and the blessedness of working in harmony with the everlasting yet ever fresh laws of nature are thus impressed upon the young heart.

What a joy to see the trees put out their leaves and their blossoms. Why does one kind follow another, and not all leaf out at the same time? And look at the catalpa! The lower branches throw out their tropical looking leaves in advance of the upper branches. Oh, the mysteries of the forest.

But why are the upper limbs lag-gards? The catalpa is late in starting and late in ripening its summer growth, and the top buds are weak, like corn kernels, and have not the vigor to push out a new growth promptly. And sometimes, the upper extremities fail to leaf at all.

It is wise to be up with the times, but not to crowd the season. Many a man put on his gossamer underwear some warm day and repented when the wind shifted to the north. The weather clerk is as unreliable as the average alienist.

My firewood for the year is all sawed and split and is seasoning. It is all home grown, too, and cost nothing but the expense of fitting it for the range.

Oh, yes, it was a little work to set out the trees, but they paid that all back in moderating the climate, in cooling summer shade and in holding back the fierce winter gales. They paid all bills in this way and besides this, there was the charm of their presence while growing.

Agricola indulges in fresh hopes with every new year, but when the asparagus is ready for the table hope begins to have its fulfillment. For twenty years that same bed has furnished all the family could eat, with a surplus for neighbors and for sale in town.

The main secret of success with asparagus is to keep the ground very rich. It should be mellow, but if it is rich enough the mellowness is almost a consequence.

For the first time I have tested the seed corn, each ear separately. One hundred per cent of the ears will grow, and over ninety-eight per cent germinate strong. Well, the satisfaction of knowing this is good pay for the trouble, and disard-

ing the weak two per cent makes assurance positive.

Let us now be up and doing lest some sharp fellow arise and do us.

Too many farmers keep an unnecessary lot of roosters whose only vocation is to crow over the folly of their owners.

Too much of mother's lap and too little of mother's slap sometimes makes a sissy boy of material which might have made a man.

The larch is a beautiful tree, but do not set one out unless you do it early in the season. Many have failed to make it grow in the corn belt. The larch starts very early in the spring and it is hard to make it live unless set before it is in leaf.

Avoid the dollar which lowers character as it goes down into the breeches pocket.

The bible does not tell how to select a good dairy cow, but the modern authorities do say that it is necessary to select one having what in biblical language is called a big belly.

The study of Greek furnishes mental discipline. The high school student who substitutes agricultural chemistry for Greek will get mental discipline all right, and something else.

We are too apt to flatter ourselves that our vices are inherited and our virtues self-made. But will this kind of bookkeeping satisfy the final gatekeeper?

If Agricola were challenged to make a metaphor in promptu it would be something like this: Never frighten a gosling nor be frightened by a goose.

The garden furnishes all that is needed now for physical culture, and, unlike the gymnasium, the pay is on the credit side of the ledger.

When a farm separator is worn out, if of standard make, its age may be renewed and it be made "just as good as ever." The screw gear wears out first, and getting a new screw gear is about the same as getting a new separator. This is Agricola's experience.

## IN AND AROUND WISCONSIN.

The canning factory of Reedsburg will branch out this year into canning string beans.

A company with a capital of \$10,000 has been organized in Berlin for the purpose of manufacturing rural route boxes and stamped steel goods.

The first white child born in Wisconsin, recently died at Minneapolis. Her name was Mrs. Van Cleve, born at Prairie du Chien, in 1819.

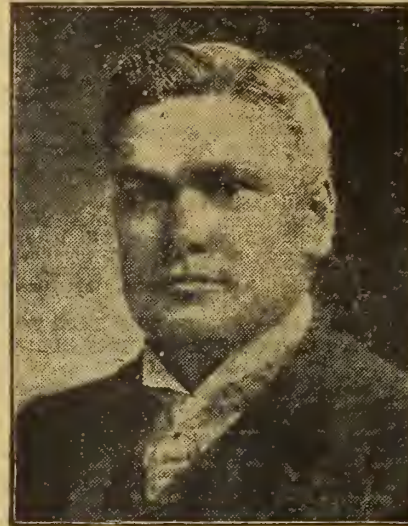

A plan which originated in Chippewa county is being carried out to present a monster petition to the legislature indorsing a bill for prison made twine. The petition will be signed by farmers throughout the state, a large majority of Chippewa county farmers having already signed it.

The Calumet County Dairy Company is having a great deal of trouble with its cold storage plant which is being erected. The site seems to be on quicksand and during the excavation for a basement several springs were struck, and one day a fountain throwing a four-inch stream was uncovered.

Work will be started soon by the employees of the Menominee River Sugar Company, of Menominee, Mich., upon the shipment of seed to the farmers in various portions of the country who are to

## LANDS AND HOMES FOR SALE

HAVE YOU SEEN SMITH? W. F. SMITH REALTY CO., OF KEARNEY, NEB. WE SELL THE EARTH Write us for our new list of central and western Nebraska lands, the cheapest for its value on earth. Write today. W. F. SMITH REALTY CO., KEARNEY, NEBRASKA

raise sugar beets during the coming year. The territory of the Menominee factory runs as far south as Sheboygan and as far north as Lake Superior.

The central part of the state experienced heavy snow fall early last week and at Plainfield, Waupaca and other places a fall of ten inches was reported. In some regions wind heaped up big drifts which will remain no doubt for many days. No loss to farming interests has been reported and it is hoped that this is the last spell of winter.

Revelations of wholesale frauds practiced on farmers of the state have been discovered. About the middle of last month a firm under the name of the Adams Grain and Commission Company opened offices, it is alleged, in Milwaukee and sent letters to farmers all over the state offering to buy eggs at several cents higher than the market price. A few correspondents asked for references, but a larger number sent in shipments which it is charged were sold at prevailing prices. Remittances to farmers were not made and an inquiry led to the above developments. Nearly \$300 worth of eggs had been received. This is a case which illustrates the need of better business methods on the farm.

A full car load of birdseye maple has been shipped from Daggett in Menominee county, Mich., consigned to London, England. Large quantities of logs of this kind are being shipped to foreign markets of late and the demand for them, as well as the prices, are on the increase. The timber is used for the manufacture of special pieces of furniture and also for finishing materials.

The purpose of the new arrangement is to be helpful in raising the quality of Wisconsin butter and cheese to the highest standard and to aid in locating the causes and defects in these products. These monthly examinations are in no sense contests, but are designed purely to assist the butter maker and the cheese maker in his effort to improve his

**FOR SALE OR EXCHANGE:** 360 acres Mer county, Missouri, improved, good land. 246 acres Henry county, Missouri, good new improvements, productive soil. Write for description and price. Box 161 Independence, Iowa.

**FOR SALE:** A few choice quarter sections. Free homesteads adjoining for right parties, on the new railroad N. Dakota and Montana. Address, 918 Security Bank Building, Minneapolis.

**SOUTH DAKOTA FARM—320 acres** good agricultural land, 2 ml. from town; some improvements; \$22 per acre. Address, C. B. Powers, Pukwana, S. D.

products, and to maintain a high standard of quality in them.

## The Manure Spreader.

To the Editor of The Homestead:

I read with interest an article in a late issue of your paper regarding manure spreaders by Alex A. Arnold, and I wish to say that I do not agree with him that they cannot be used when there is snow on the ground.

I will state that I have never had much experience with manure spreaders, having used one only a short time, but I can unload manure with mine when there is snow on the ground the same as when there is none, unless, of course, it would be two feet deep or more. I have used it when there was six inches and more covering the ground completely; also when the snow was partly thawed out and was icy and I had no trouble whatever. Now, this may seem putting it pretty strong, but the up-to-date spreader of today will do the work as I have before stated, and all persons using such a machine will back my statement.

I use my spreader with two medium-sized horses now, and they can do the work well, having only ordinary manure and I take out only a few loads a day. For very heavy manure, and if you put in a big day's work, I would advise getting a three-horse equipment. The beater wheel should have irregular length teeth (short and long), as this kind will distribute long manure more evenly than those having all short teeth. I have used both kinds and this has been my experience.

Pierce Co., Neb. Wm. Hennefer, Jr.

## 34 Years Selling Direct

Our vehicles and harness have been sold direct from our factory to user for a third of a century. We ship for examination and approval and guarantee safe delivery. You are out nothing if not satisfied as to style, quality and price.

## FOR SALE, RENT OR EXCHANGE:

Good improved grain and stock farm of 740 acres in Chautauque county, Kansas. Write for particulars. Box 81, Independence, Iowa.

### Echoes From a Kansas Farm

By Henry Hatch

There is such a thing as wasting \$50 a year using a \$15 planter. We have done it, anyhow.

The corn planter that puts two kernels in one hill, four in the next, and then drops back to three for awhile, isn't accurate enough for this age of the world. A new planter should not plant that inaccurate and erratic.

The drill-drop planter, the kind that drills all the time, with valves to collect the seed between hills, is more or less erratic in its dropping. We have seen them where much one and four kernel to the hill dropping was done.

It is always a question how deep to plant. Just now the weather is dry, and should it remain dry until the corn planted gets well sprouted, deep planting would be just the thing. We have planted deep during a period of dry weather, however, and had heavy rains come on soon, resulting in only the rows on the back-furrows and the well-drained knolls showing a stand.

Why is it that location makes a great deal of difference in the manner of farming, even when two localities are but a few miles apart? We live practically the same distance from four towns. On the road to two of these towns, the farmers are always well up with their work, while to another town, they are slower, and to the fourth slower still. This is not a happen-so, but it has been of yearly occurrence ever since we have lived in the state. Some localities are slow to let loose of a custom.

It is not often that a fellow sows one thing, or thinks that he does, and reaps another. One of our neighbors sent for seed of *Bromus Inermis*, and raised a great seed crop from it the second year. He supposed all the while it was *Bromus*, but when he went to sell it, the dealer thought it was not *Bromus*, so sent off a sample, to a seed expert, before making any price on the seed. The seed expert (?) sent back word that it wasn't *Bromus Inermis*, and he did not know what it was. No one has yet been found that does know what it is.

Life is too short to fool away the use of land growing grass or clover, with which is mixed plantain or other weed

pests. The best thing to do with a plantain infested field is to plow it up immediately, and start afresh. The state of Kansas now has a "pure seed law," and we hope some practical good will come of it.

"How many chickens did you get from that last hatch?" is an oft asked question, nowadays. The number of incubators in use throughout the width and breadth of an ordinary township is surprising in the extreme. It seems that almost every other farmer has from one to three machines, and they are kept busy just now. As soon as one hatch comes out of the shell more eggs are put in. The Americans are a race of chicken eaters, or the market would be over-supplied.

The very first thing we did this spring, after getting the small grain in, was to go ahead and disk the stalk land that would soon be plowed for corn. We can see a great difference in plowing this land; it turns the soil over finer, and the draft of the plow is lighter. Of course the weather has been favorable for this work all along. There are seasons here when we do not find the time to give this extra preparation, on account of wet weather keeping all field work at a standstill.

We are compelled to admit that there are some as badly weed-infested fields here in this part of Kansas as anywhere in the world. It seems to us that we would not sleep well at night if we had the cockleburrs that some farms have. At any rate, we would certainly "do something" that would have a tendency to lessen them. In getting rid of the cockleburrs found on this farm when we took possession, one good way found was to sow a forage crop. By leaving the field unplowed until the last of May, then working it into shape, by plowing and harrowing, for a crop of thickly sown cane or kafir corn, the burrs are given a severe set-back for that season. But it takes everlasting fighting to finally get them down and out.

#### The Week in Kansas.

To the Editor of The Homestead:

The dry weather has continued, but the almost summer heat has not. It has been very cool practically ever since our last letter was written, and each morning of the last two days we have found thin ice in the hog troughs. This, together with the dry condition of the soil, is making all growth slow. There has been no white frosts because it is too

**CENTURY MFG. CO.,**  
Dept. 750 East St. Louis, Ills.

dry, and nothing has been injured by the cold weather, except to be retarded in growth.

Of course the dry weather is the theme now. Old settlers say it's starting out just like a dry year in the '60's did. We do not doubt this in the least, but how it will end, is quite another question. In less than two weeks we may be growling because it doesn't stop raining, so there is no certainty that this season will be like another in the dim past, just because an old settler remembers that it is "starting in like it."

Last year our period of dry weather came in May. It injured the tame hay crop and the crop of spring sown small grain. It seems to be with us just a month earlier this year. It is having an effect on the grain sown a few weeks ago, and all grass is not making the growth it would with more moisture. Oats that were hogged in before the fields had dried sufficiently, are looking the poorest. The dry weather is telling badly on all such.

There is a great newspaper scare on right now about the "green bug." It has been seen, according to all newspaper reports, in the wheat in about all the counties of the state, this county included, but we have not been fortunate enough to find a single specimen as yet. Oklahoma reports much damage done, but in all cases we think the dry weather is cutting the deepest. The ideal time for all bugs and insects to work and increase is just the weather we have been having for the last month, while the same kind of weather retards all growth, making it a case of burning the candle at both ends. But the dry weather end is burning the fastest.

Work is being pushed rapidly by all who believe in pushing spring work. Considerable corn has just been planted by some, and none by many. Accordingly as fields have been worked, there is moisture enough, or almost none at all. Some are planting among clods and others in well prepared ground. The man who has followed the plows with the harrow has made by it, this spring. It is the same old story this evening—dry and cool.

Henry Hatch.

Coffey Co., Kan., April 10, 1907.

#### Possibilities of Corn Production.

To the Editor of The Homestead:

The article in a late issue of your paper in regard to the possible yield of corn when planted in hills forty-two inches each way interested me, and I did some experimenting and figuring that may throw yet a little more light on the subject.

Instead of taking it for granted that one hundred ears make a bushel, I sought a method of calculating that might give us more definite results. I went to my crib and picked out three good ears of corn. They were all exactly ten inches in length. Two of them had sixteen rows of kernels and one fourteen, and the three ears weighed three and a half pounds. Taking the editor's figures for the number of hills

to an acre when planted, as noted above, 3,556, this would give us 12,446 pounds of corn to the acre, or, at seventy pounds to the bushel, 177 bushels. These figures represent the product from what might be considered an ideal crop—a perfect stand, exactly three stalks to the hill, and a good ear to each stalk.

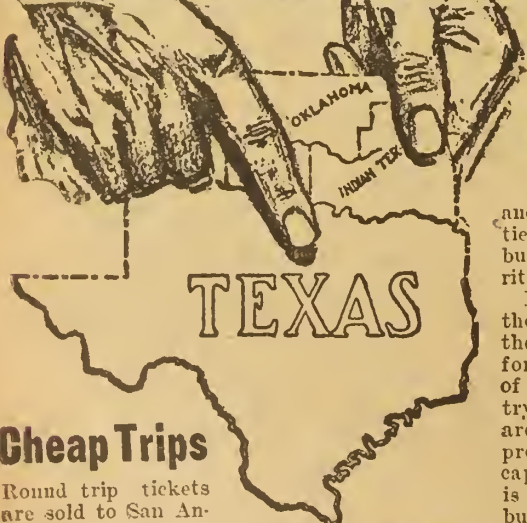

In every undertaking in life we should have our ideal and strive to attain it. We may fall short, we usually do, but we must study out every detail in a plan to come as near attaining it as it is possible to do. Then if, every condition being favorable, there is a possibility, as shown by the figures, to raise 177 bushels of corn to the acre, it is up to us to do our part in making the conditions and trust to nature to do the rest. We must be sure that we do our part. The preparation and fertilization of the soil, the selecting and grading of the seed, the utmost care in planting and cultivation, all these are factors that must receive proper attention, and the neglect of one can scarcely be remedied by extra attention to the others.

I note that one of your correspondents fails to see how one hundred bushels can be raised to the acre with only two ears to the hill. Taking the weights I give above, we see that each hill will yield about two and a quarter pounds of corn, and that 3,556 hills, or one acre, will produce 8,001 pounds, or 114 bushels.

Now, if with a perfect stand and a perfect crop we can approach 177 bushels, it would seem that the thought would furnish inspiration to every farmer in the corn belt to adopt better methods than many of them follow, and that they would have confidence in their ability to produce at least 60 per cent of an ideal crop, which would be over one hundred bushels to the acre. As I know of several farmers in this and adjoining counties of Illinois who have produced over one hundred bushels to the acre, and without extraordinary effort, it would seem that we are not bringing our \$150 land up to its possibilities if we do not come very near that yield at least three years out of four; and I certainly believe that with the progress farmers are now making in the study of the corn plant and the best methods for growing it, that the time is near at hand when one hundred bushels to the acre will be as common as sixty now. Counting the number of hills and number of ears to the acre, and noting what a difference results when 10 or 20 per cent of the number is cut out, is calculated to show us the necessity for securing as perfect a stand as possible. This is one of the important requisites in securing a heavy yield. Macon county, Ill. J. C. Nicholls.

So many in starting a poultry plant aim too high. They want to walk before they are able to creep. The most successful poultry farms in the country are those that started small and gradually grew up. No business can be successfully conducted without experience

## SEE THE SOUTHWEST

## Go Now!

and see for yourself the opportunities for making money—for home building in Oklahoma, Indian Territory and Texas.

Prospects were never brighter—the crops are fine and show plainly the possibilities of the Southwest for you. There is an actual need of more hands to develop the country. In the Southwest are vast areas of unimproved land not yet producing the crops of which it is capable. Practically the same thing is true of the towns. Few lines of business are adequately represented. There are openings of all sorts for the right men. Are you one?

## An Exceptional Offer

To enable you to see the Southwest, its advantages and opportunities, round trip tickets will be on sale April 16th and May 7th and 21st, to all points Southwest at exceptionally low fares. Tickets permit of stop-overs going and returning and are good thirty days from date of sale.

Write today for particulars and ask for our paper "The Coming Country."

FIELD NOTES.

Messrs. Manley & Co., of Lyons, Neb., are offering Proud Advance boars for sale.  
 Five young Galloway bulls are offered for sale by Mr. W. W. Scholes, of Onawa, Iowa.  
 A few good Scotch bulls are offered for sale by Mr. E. Funke, of Greenfield, Iowa.  
 Mr. Grant Davidson, of Manson, Iowa, has a few Crimson Wonder I Am sows for sale.  
 Berkshire sows and gilts are offered for sale by Mr. E. H. Dancer, of Lamoni, Iowa.  
 Three O. I. C. fall boars are offered for sale by Mr. H. C. Mehring of Manson, Iowa.  
 Ten head of Junior Jim gilts are offered for sale by Mr. Austin Renshaw, of Blair, Neb.  
 Mr. A. F. Hager, of Avoca, Iowa, is offering a few good young Hereford bulls for sale.  
 Mr. C. S. Harrison, of Blencoe, Iowa, is offering a few good Percheron stallions for sale.  
 Duroc Jersey boars of summer farrow are offered for sale by Mr. C. M. Dewey, of Shannon City, Iowa.  
 Hereford bulls and heifers are offered for sale by Messrs. Edmonds, Shade & Co., of Kingsley, Iowa.  
 Two yearling Proud Advance and Top Notcher Again boars are offered for sale by Mr. W. J. Prather, of Russell, Iowa.  
 Mr. H. J. Weber claims October 2d as a date to hold a public sale of Short-horn cattle at his farm near Jefferson, Iowa.  
 Improved English Yorkshire sows, due to farrow in April and May, are offered for sale by Mr. F. Rabeller, of Leigh, Neb.  
 The great Percheron stallion, Lord Tennyson 48208, weight 2,200 pounds, a grand individual and a grand good breeder, is being offered for sale by Mr. J. S. Golder, of Scribner, Neb.  
 Mr. Roy Stacy, of Rochelle, Ill., the well-known breeder of Duroc Jersey hogs, writes that he has some fine pigs by Tip Top Lad, a grandson of the champion Tip Top Notcher, which he will offer for sale later in the

season. If interested in Durocs write him, kindly mentioning this paper.

French draft and Percheron stallions and mares and Kentucky and Missouri-bred jacks are offered for sale by Mr. C. T. Gollehon, of Blair, Neb.

A few choice quarter sections of land with free homesteads adjoining, for right parties, are offered for sale in an advertisement, the address of which is 918 Security Bank Bldg., Minneapolis, Minn., that appears on page 22 of this issue.

Mr. W. C. Pollock, of Arlon, Iowa, has a registered Percheron stallion, weighing 1,700 pounds, with fine style and action, which he is offering for sale at a reasonable price in his advertisement that appears on page 26 of this issue.

The Ardmore Stock Company, of Holstein, Iowa, are offering for sale some good Scotch and Scotch-topped bulls. These are sired by Imp. Scottish Pride and Imp. Lord Mount Stephen. They have some good ones and are pricing them right.

For Red Polled breeding stock, either sex, write to Mr. H. M. Hansen, of Brayton, Iowa. This stock is from cows that are good milkers and their progeny in the past has always sold well. When you write him kindly mention The Homestead. See advertisement on page 26.

Messrs. Rhea Bros., of Arlington, Neb., have about thirty home-bred Percheron stallions on hand that they are pricing very reasonable. They also have some imported stallions and some of their leading prize winners will also be sold. They certainly are offering some bargains.

Mr. J. L. Slick, of Lanark, Ill., writes: "The three-year-old stallions that I am now offering, though not especially fitted for sale, are good ones, with plenty of strong bone, recorded and are broken to harness. They are right and may be bought right." See advertisement on page 26.

Berkshire gilts of fall farrow, some extra good ones, can be had by writing to Mr. C. J. Martin, of Churdon, Iowa. A number of these are very fancy in head and ear, with good backs, good feet and plenty of size. He will price these right and will sell them in singles, pairs or as many as a breeder wants.

Messrs. Wheatley & Ward, of King City, Mo., can furnish Aberdeen Angus bulls that are ready for service. Their herd is one of the largest in the West, which gives an excellent opportunity for making selections. See page 29 for their advertisement and if wanting a bull at a moderate price write them or, better still, go and see the herd.

Col. Geo. P. Bellows, of Maryville, Mo., made in the neighborhood of 150 sales during 1906 and the present year promises even better than last. Colonel Bellows is booking many dates for the fall of 1907 and the spring of 1908. Those who contemplate wishing his services should not delay getting his open dates and fix their sale date. See page 26 for Colonel Bellows' address.

Messrs. James Wilson & Son, of Avoca, Iowa, are offering two splendid young Polled Durham bulls for sale. This firm have one of the best Polled Durham herds in the West and they are reliable breeders. Anyone buying a bull of them can absolutely depend on what they say. These two bulls are good enough to head herds. It will pay anyone wanting a Polled Durham bull to go and see these.

Mr. Geo. H. Burge, of Mt. Vernon, Iowa, has concluded to hold a public sale of Short-horn cattle on October 10th. It was not his intention to hold this sale until some time next spring, but he has so many calves on hand now, and some to come every month, which would take him into the winter with more than he could handle, so he has decided to sell in October. He says this sale will be an unusual one in the number of Money Musk heifers he will have for sale.

If any of our readers want a good young Scotch bull they can buy them of Mr. N. A. Lind, of Rolfe, Iowa. He has six that are about two years old and a few good yearlings. They are mostly sired by Imp. Fancy's Pride, the bull that has sired so many of Mr. Lind's show cattle. Among these young bulls are some that could be made winners should they fall into good hands. If any of our readers are looking for a young Scotch bull it will pay them to go and see the Lind bulls.

Buyers of choice Improved Chester White swine should remember that Mr. James Fisher, of Eastman, Wis., has a choice lot of March and April pigs of this season's farrow. The kind that he keeps are the large, mellow, easy-feeding sort. This breeder has always had a good reputation for the bone and finish of his stock and no doubt he can satisfy your needs to the best advantage. Write him for prices and catalog as advertised on page 26. Kindly mention The Homestead.

Mr. J. L. Slick, breeder of Poland China hogs, of Lanark, Ill., writes: "My advertisement in The Homestead is a paying proposition. The bred Poland China sows that I have been offering are all sold, with orders to return. But we are now breeding a choice lot for July and August farrow and have a bunch of good young boars from seventy-five to 200 pounds that are well enough bred for the professional breeder and are O. K. for the feeder, both in price and quality." See advertisement on page 26.

Mr. M. P. Hancher, of Rolfe, Iowa, has about 100 Poland China pigs on hand of spring and fall farrow, and will be in position to offer the trade some good things this season. These are sired by his present herd boar, Trenton Shine 106347, a hog with lots of size and plenty of bone, and also by his former herd boar, Chief Tecumseh 4th. Mr. Hancher will make a brood sow sale next winter and he will have a good offering for the buying public. He also has a good herd of Short-horn cattle and has a few nice young Scotch bulls for sale.

Mr. R. J. Johnson, of Humboldt, Iowa, formerly one of the foremost breeders of Short-horn cattle and Poland China hogs in the United States, and for years the head of the live stock division at the Iowa State Fair, has branched out again in the live stock business and has laid the foundation for one of the very best Berkshire herds. He purchased a son of the noted boar, Lord Lee 61138, dam Lee Duchess by Baron Lee,

OUR RED LETTER

Combination Offer

AGAIN OPEN TO THE FARMERS OF THE MIDDLE WEST

FIVE SPLENDID PAPERS and MAGAZINES for \$1.25 A YEAR. SEND US YOUR SUBSCRIPTION TODAY.

The Homestead has never made an offer to its subscribers which proved so widely and immediately popular as did our famous "Red Letter Combination" last season. Thousands upon thousands of farmers throughout the corn belt took advantage of it to supply their families with an abundance of wholesome, instructive and entertaining periodical literature, and we have been asked many times if the offer would again be open to renewals and new subscriptions. Although the profit on such an offer is necessarily small, we have decided to repeat the offer during the present season and have secured the consent of the other publishers interested to advertise it again for a limited time, subject at any time to revocation without notice.

THESE FIVE PUBLICATIONS FOR \$1.25 A YEAR.

The Homestead, the world's greatest farm paper, published weekly at the heart of the corn belt and dealing with agricultural problems from the middle-western point of view; edited by farmers residing upon and operating their own farms; not a one-man paper, but the embodiment of the combined wisdom and experience of a large staff of editors and contributors; with departments covering the whole range of farm life in this section.

The Chicago Weekly Inter Ocean, a grand general family newspaper, giving an abundance of news, literature, poetry, humor, market reports, reading matter for women and children—something for every member of the family.

The Kansas City Weekly Star, an able, fearless, independent newspaper, dealing with the problems of the day from an independent point of view. Literary contents very attractive and uplifting.

The Homemaker, a delightful monthly for the women and children of the farm, readable and valuable from first page to last—brightening and broadening the life of every member of the farm.

The Farm Gazette, a beautiful magazine of profitable agriculture, printed on fine paper, with elegant illustrations and a cover in colors.

If already a subscriber for any of them, your time will be extended for one year.

To secure this great bargain, clip and fill out the following coupon:

Date .....190..

Homestead Company, Des Moines, Iowa:

Enclosed find \$1.25, for which please send the following five newspapers and magazines for one year to my address: Iowa Homestead, Chicago Weekly Inter Ocean, Kansas City Weekly Star, Farm Gazette and Homemaker, as per your special offer to Homestead readers.

to head his herd, and he is assisted by Oak-bourne Duke, a grandson of Baron Lee 6th and out of a dam by the well-known sire, Big Ben 78181. He has drawn on some of the best herds in this country for sows, and some of these days expects to have as good a herd as there is in the West. When Mr. Johnson bred Short-horns and Poland Chinas he had two of the best herds in this country, and we expect him to go to the front with his Berkshire herd.

TWENTY-FIVE HEREFORD BULLS FOR SALE.

These are sired by Beau Donald 12th 90957, one of the best sons of old Beau Donald. They are yearlings and two-year-olds, and are out of Wild Tom, Hesiod, Archibald and Stone Mason cows. Write Mr. A. Spooner, of Mondamin, Iowa, or go and see him. He can easily furnish a car load if wanted.

TELEPHONES AT SMALL COST.

Mr. B. H. Van Vliet, of 1006 Grand Ave., Des Moines, Iowa, is offering second-hand telephones at \$2.50 each. These phones are just as good as new, but they are not adapted to the new exchange that is now being installed in the city of Des Moines. See the advertisement on this page of this issue, and remember that for \$2.50 the phone will be prepaid to your nearest freight depot.

1,500 HIGH-GRADE ANGORAS.

The Angora goat fills a very good position on many farms. His ability to clear up brush land is well known. Mr. Wyatt Carr, of Collins, Iowa, has a flock of Angoras, including wethers, a few bucks and a few American milk goats. He would be glad to meet you at his farm or to answer any inquiries which you might address. Kindly mention The Homestead in writing him. See page 17.

BANNER'S VICTOR 242584 FOR SALE.

Anyone wanting a good young Short-horn bull to head a herd should write or go and see Mr. C. R. Warren, of Glenwood, Iowa. He is offering Banner's Victor for sale. He is a two-year-old and was the second-prize bull at the Iowa State Fair in 1906. He is a grandson of old Cumberland and is a bull that anyone who owns a herd of Short-horns would be proud of at the head of their herd. Mr. Warren owns his sire and therefore can spare this young prize winner. He is a most excellent individual and is all right and is looking well. Write Mr. Warren at once if you want him.

L. G. SHAVER'S POLLED DURHAMS.

Mr. L. G. Shaver, of Kalona, Iowa, breeder of prize-winning Double Standard Polled Durham cattle, writes that he is sold out of bulls over six months old. He has shipped cattle during the winter to Montana, South Dakota, Nebraska, Minnesota and Missouri, besides selling large numbers in Iowa. Recently he has sold what he considers a prize-winning seven-months-old calf to Mr. G. H. Colvin, of Ft. Madison, Iowa. This calf is out of Orange Lady, an Orange Blossom cow. Another November calf has recently been sold to Mr. Chas. Monday, of Cory, Colo., to be shipped the 1st of May. This calf was ordered young because the express amounts to \$8.50 per hundred weight. Since the 1st of January Mr. Shaver has sold something like forty

head by private treaty. He has the finest lot of young calves coming on that he has ever raised, from splendid cows and extra good bulls. Those who are interested in this breed should keep Mr. Shaver in mind and remember that he keeps the kind that win at the state fairs and at the International Exposition. See advertisement on page 29.

GEO. KITCHEN, JR., SELLS TWO GOOD "DODDIES" IN THE MCGAVOCK SALE AT OMAHA.

Among the good things consigned to the Aberdeen Angus sale to be held at Omaha, Neb., on May 1st, under the management of Mr. W. C. McGavock, is a bull and cow from the herd of Mr. Geo. Kitchen, Jr., of Gower, Mo. The bull is a yearling past and was got by the Trojan Erica bull, Elastica, being out of a Trojan Erica cow that was sired by Bion, the Highland champion bull imported by Messrs. Goodwin and Fleming. This young bull's dam, Rose of Emerson 3d, was the dam of the undefeated Rose Gay. In consigning this bull Mr. Kitchen consigns one that is thick from end to end, a good fletcher and a bull that will do some herd plenty of good. Fair Helen, the cow, was got by Gay Blackbird and is well along in calf to Louis of Meadow Brook, Mr. Kitchen's great show and breeding bull, whose get have won seventeen first and champion prizes. In Louis of Meadow Brook Mr. Kitchen has one of the great bulls of the breed. The young things now coming on are of great promise and some very promising show material is being developed. Fair Helen, the cow that goes in the McGavock sale, is a typical Angus cow, even in all her lines and a good producer, she being the dam of the show bull, Elm Park Lad. She should please some appreciative buyer who wants a good producing cow bred to a bull that is making a reputation as a sire of high-class stuff.

MARSHALL COUNTY SHORT-HORNS.

Messrs. Jesse Binford & Sons, of Albion and Liscomb, Marshall county, Iowa, are among the pioneers of central Iowa in the rearing of good Short-horn cattle. For more than twenty years the writer has been familiar with their breeding operations, and at no time in their history has he known their herd to be in as high a state of perfection as at the present time. Their cows have wintered nicely and are at the present time in the best condition they have ever been on their farm at this season of the year. They have a few bulls that they care to part with in the near future and incidentally they remarked that they might part with their herd bull, Waubun. This bull was sired by Baron Kear, and is a straight Orange Blossom Cruickshank. He has been a splendid breeder and not only that, is one of the best individual Short-horn bulls in central Iowa. He was bred by the late John Glennous, of Iowa City. This bull has unquestionably been the best breeding bull the Messrs. Binford have used for many years. He is a solid red and worthy of a place at the head of a herd. So much of the get of this bull remain on the farm that they have deemed it expedient to make a change. They have five young bulls for sale, several of which are exceptionally good ones. Their other herd bull is Nokomis 162763. This is a

FOR SALE AT A BARGAIN

SIX slightly used Cyclone well drilling machines, 5 five steam, one gasoline power. All in first class shape. Also 2 1/2 horse power gasoline engine. Address,

B. F. RICHARDSON, DUBUQUE - IOWA.

TELEPHONES

Town..... State.....

Brawlt Bud bull, also sired by Baron Kear 117998, hence it will be seen that he is a straight Cruickshank of the most aristocratic breeding. It has been the use of just such bulls as these that has given Messrs. Bin-ford their prestige in the Short-horn busi-ness. In addition to the five bulls mentioned for sale a few females might be spared in connection with the sale of a bull. How-ever, they have their herd reduced now to about sixty head of breeding cows, and are not particularly anxious to sell females at this time. But they have always been very accommodating to their customers, and when a good customer appeared at their place of business he could usually get prices on al-most anything he desired, and we predict this same liberal policy will be pursued in the future. Their changed announcement will be found on this page. When writing them kindly mention The Homestead.

#### SOME GOOD ANGUS BULLS.

The man hunting some good Angus bulls should get in touch with Mr. W. F. Eckles, of Green City, Mo. Among these Mr. Eckles is offering his double Pride herd bull, Pride's Albion 5th, a massive bull that is a great sire, he having sired the first-prize heifer at the World's Fair at St. Louis and the first-prize heifer at Nebraska State Fair, and the Hutchinson, Kan., show in 1906. Mr. Eckles is only selling Pride's Albion because he is keeping so many of his daughters that he cannot use him to advantage. See page 29 for Mr. Eckles' advertisement and when writing him kindly mention The Homestead.

#### J. H. MOYER'S SHORT-HORNS.

A Homestead representative recently spent an hour or two among the good Short-horn cattle owned by Mr. J. H. Moyer, of Newton, Iowa. At the present writing Mr. Moyer has a splendid bull for sale called Nonpareil Courtier Jr. 243631. This splendid bull was calved May 13, 1904. His dam was Beauty 48th of Maine Valley. He has been using this bull at the head of the herd and has demonstrated his worth as a breeder. The numerous good calves by this bull can be seen by any prospective buyer. He is a thick-fleshed bull, true and even in his lines, possessed of good quarters and as a whole must be considered one of the good, thick-fleshed breeding bulls of central Iowa. In addition to this choice bull, Mr. Moyer has for sale a half brother to him, a beautiful red, sired by Scottish Champion. He has for dam the same cow, Beauty 48th of Maine Valley, which, by the way, is one of the best Short-horn cows in Jasper county. Mr. Moyer's herd is not of sufficient numbers at present to justify him in offering to price many females. His chief concern is in the sale of these two bulls, yet we suspect that if a bull buyer were to present himself and would not be content without securing one or more of the choice females in Mr. Moyer's herd, that he might be persuaded to part with one or more. Nevertheless, this is a matter of speculation on our part. The Homestead can heartily recommend Mr. Moyer as a safe man with whom to deal. His announcement appears on page 31.

#### MALAKA SHORT-HORNS.

Conditions at Mr. H. D. Parsons' Malaka herd of Scotch Short-horn cattle held at Newton, Iowa, or Baxter, Iowa, were never better. With some two or three old cows excepted, the herd is entirely Scotch. Scot-tish Champion proudly claims the honors of chief stock bull and it would require a phenomenal bull to wrest this position from him. The numerous strictly choice calves by this bull persuade Mr. Parsons to the be-lief that he has never owned a better sire and few breeders have ever had his equal. There are seventy-five Scotch cattle now in the herd. He has for sale now and ready for service one red Cruickshank Mayflower by Scottish Champion that is a top notcher, a herd header. He also has a splendid dark roan bull by Lord Lenton 206868 and out of Lady Gloster that should be doing service in some herd. Both of the above bulls are past one year old and are worthy of the in-vestigation of anyone in need of something really good and royally bred. Imp. Blythe-some has a good red bull calf ten months old. She has a three-year-old daughter by Imp. Choice Goods that is the best matured daughter of this great bull that we have ever seen by him. If there is a better worth four figures, she is the one. Some great work is being done at Malaka Farm, as will be ver-ified by a trip to the farm. Mr. Parsons is one of the older breeders of the state and there are none in America in whom the breeders have more confidence. Miss Pearl Parsons, who has prepared all of her father's catalogs, would be pleased to compile and have printed catalogs for any of the Short-horn breeders of the West.

#### FARM AND GARDEN HELPS.

Tools that save time and labor and result in larger crops. The scarcity of good farm help is a serious problem which confronts the farmers today, and the result is that many of them are compelled to let a large part of their land lie idle and allow it to run to grass and weeds. The farmer or gardener who depends on Iron Age Farm and Garden Tools has the best help in the world. These tools do the work easier, quicker and better than it can be done by any other tools or methods. There are Iron Age tools for every farming need, and some of them combine several tools in one implement. The No. 6 Iron Age tool, for instance, can be used either as a double or single wheel hoe, or as a hill or drill seeder. At a single operation, it opens the furrow, sows the seed, covers and rolls the ground and marks the next row. It takes only a few minutes to change into either form of wheel hoe. This implement can also be had without the seed attachment, when it becomes the No. 1 Iron Age combined double and single wheel hoe—the only wheel hoe that combines these two forms. Illustration of the No. 1 is shown herewith. The No. 60 Iron Age riding cul-

tivator is another great labor saver. It is quickly adjusted to cultivate any crop in rows from twenty-eight to forty-eight inches in width. It is successfully operated on both level and hilly land, and all kinds of soil; is easy to guide and easy to turn in small-

est space. Iron Age potato machinery brings success to the potato grower and makes his work more profitable. The Iron Age (Im-proved Robblins) potato planter is the only planter that does absolutely perfect work—no misses or doubles—and doesn't bruise or puncture the seed. Other Iron Age potato machinery comprises four-row sprayers, special riding cultivators and potato diggers. Iron Age tools are made by the Bateman Manufacturing Company, of Grenloch, N. J., and the works have been established since 1836. Only the best materials and work-manship enter into the making of Iron Age tools. They are light, strong and easy run-ning, and every implement is guaranteed. The 1907 Iron Age book is the most beau-tiful book of its kind ever published, and shows and describes the complete line of Iron Age farm and garden tools—wheel hoes, seeders, fertilizers, distributors, horse hoes, potato planters, cultivators, sprayers, dig-gers, etc. It is a book that should be in the hands of every reader of The Homestead, and will be sent free on request to Bateman Manufacturing Company, Box 148, Grenloch, N. J.

#### THE E. L. NAGLE & SON CHESTERS.

The firm of Messrs. E. L. Nagle & Son, of Deep River, Iowa, report the arrival of 100 spring pigs up to date, sired by such well-known boars as Pioneer 9515, Neponset Henry 15607, Top Notcher 12661, I Will Win 13629 and Perfection Model 12785. The pigs are all strong and hearty and the firm are now hooking orders. Breeders who se-

cure some of these young Chesters at three or four months of age will be specially for-tunate. The firm will send out nothing but what comes up to a high standard and gives every promise of growing into the right kind. Messrs. Nagle & Son also have on hand five September yearling boars in good condition. These will be priced right. See the adver-tisement on page 29 and when you write please mention The Homestead.

#### HIGH-CLASS HEREFORDS IN THE OMAHA AUCTION, MAY 1ST.

In the McGavock auction at South Omaha,

May 1st, are included some of the best Here-fords that have recently been offered at this sale place. Mr. S. R. Waters, of Poplar Bluff, Mo., who purchased at the recent Nave auction the show cow, Nutbrown 9th, at \$1,975, consigns sixteen head to this auc-tion that are of the very best type with good scale, bone and breeding. He catalogs fifteen cows and heifers and one bull and they are sired by such celebrated bulls as Beau Don-ald, Beau Brummel, Kansas Lad, Kansas Lad Jr., and the females are in calf to Prime Lad Jr., a son of the champion, Prime Lad, and there are calves at foot and cows in calf to Dale Wilton 2d and Henry Dale, grandsons of the champion, Dale. The bull included in the Waters consignment is Beau Monarch by Beau Donald 33d, a son of the great Beau Donald. He is two years old and has been used considerably in the Waters herd and is one of the best stock bulls that will go under the hammer this season. Mr. T. A. Reece, of Savannah, Mo., consigns a quartet of very handsome bulls, two of which, Admiral A. 206495 and Kenneth 218202, are both by imported bulls and are highly re-com-mended as herd headers. Two other splendid consignments from Savannah will also be found in those of Messrs. J. R. Owens and Warren Landers. Mr. H. J. Stinger, of Allen, Neb., is one of the largest consignors to the sale, being represented by both bulls and females, and including the blood of Cor-rector, Anxiety 3d, Lord Wilton and The Grove 3d. A full list of the consignors will be found in the advertisement on page 29 and the catalog will be sent upon applica-tion to Mr. W. C. McGavock, sale manager, Springfield, Ill.

#### GLENFOYLE SHORT-HORN SALE.

Short-horn breeders who have kept posted on the recent public sales of the past season will note the upward tendency of the mar-ket for this breed. There has been no time in recent years when the best cattle, both breeding and individually considered, have been in more demand than at present. In calling the attention of Homestead readers to the forthcoming sale of Glenfoyle Short-borns, the property of Mr. A. Chrystal, of Marshall, Mich., which will be held at Glen-foyle Farm on Wednesday, May 8th, we wish to emphasize the fact that the offering is one of the best of the year. Seventy-five head have been listed for this notable event, sixty-five of which are cows and heifers and ten bulls, including two of the herd bulls, Imp. Pennan Commander and Village Sultan, one of the best sons of Whitehall Sultan. In selecting the foundation stock for Glenfoyle herd, Mr. Chrystal purchased cattle of great scale and substance, combining smoothness and quality. The sale reports of past years show that many of the best lots fell to Mr. Chrystal's bid. The female offering of sixty-five head is without doubt the strongest ever sent into the sale ring from this noted herd. There are twenty-five cows with calves at side and a number of other cows are due to calve shortly after sale day. All cows of breeding age are safe in calf or have calves at foot. Mr. Chrystal realizes the fact that the discriminating breeder of today is after the top cattle. He is taking from his herd some of the most valuable cows which he owns and no one will be disappointed in the offering. They are sired by some of the most noted bulls in Scotland, Canada and the United States, and represent the most fashionable families of the breed. Mr. Chry-stal has always used the best bulls obtain-able at the head of his herd. Imp. Lovat-Champion, now at the head of the Flynn Farm Company's herd, at Des Moines, Iowa, was imported by Mr. Chrystal and used by him until a year ago, when he went to head one of the oldest and best herds of the country. A strong lot of heifers and some good bulls of the herd header sort are listed in the sale, the get of this noted bull. Imp. Beaufort Victor was another of the noted

TOO LATE TO CLASSIFY.

RED POLLED BULLS AND HEIFERS FOR SALE

By H. N. Hanson R. 1., Box 7, Brayton, Ia.

hulls used by Mr. Chrystal. He was re-tained in the herd until his death. At the head of Glenfoyle herd Mr. Chrystal is using Imp. Bapton Magnet. He is one of the best sons of the noted Silver Plate, one of the greatest sires the breed has ever produced. Imp. Bapton Magnet is one of the richest-bred bulls on this continent, thirteen of his ancestors having been bred by Mr. A. Cruick-shank. Many of the females in the herd are bred to this noted bull. Others are bred to Imp. Pennan Commander and Village Sul-tan, bulls included in the offering. Further mention of these bulls will be made in later issues. The bull consignment is a truly notable one and should attract the attention of Short-horn breeders in search of herd bulls that are bred right and are of the show-yard type. This is without doubt the best offering of Short-horns ever made from Glenfoyle, and in all respects will be one of the very best offerings of the year, such as should appeal strongly to anyone in the mar-ket for the most desirable specimens of the breed. Over one-half of the entire offering is Scotch breeding, and the Scotch-topped cattle are most excellent specimens of the breed and have been good producers. The breeder or beginner who is in the market for good, well-bred Short-born cattle will find Glenfoyle sale one of the best opportu-nities of the year. More good cattle are con-signed to this sale than any sale for the year, and the opportunity should not be over-looked by Short-born breeders. Past sales at Glenfoyle have demonstrated the fact that the cattle have sold worth the money, and good values may be had on this occasion. In our next issue we will be pleased to give further details concerning this noted sale. Write for catalog as per the announcement on page 28 of this issue, kindly mentioning The Homestead, and plan to be present sale day.

#### J. J. CONSIDINE CO. ON HAY, ETC.

Receipts of timothy hay, although some-what smaller for the past few days, continue fully equal to the requirements of the trade, and prices are a little easier, especially for the lower grades. Choice holds its own at \$17.50 to \$18. We are of the opinion that we have seen the highest prices on hay for this season and that a month from now they will be still lower. Hence shippers who still have hay in their barns will do well to get it in now. Arrivals of prairie hay are still larger than the demand and prices lower.

Choice timothy is selling at \$17.50@18; No. 1 at \$15@16; No. 2 at \$14@14.50; No. 3 at \$12.50@13.50. Choice prairie at \$12@12.50; No. 1 at \$10@11; No. 2 at \$8.50@9; No. 3 at \$8@8.50; No. 4 at \$7@8. Straw—Rye straw, \$9@9.50; wheat at \$6.50@7; oat at \$7@7.50. Corn—No grade sold at 28½¢@35¢; No. 4 at 42¢@44¢; No. 4 yellow at 42¢@43¢; No. 3 at 44¢@45¢; No. 3 yellow at 44¢@45¢; No. 4 white at 44¢; No. 3 white at 44½¢@48¢. Oats—No. 4 sold at 40½¢; No. 4 white at 40¢@43½¢; No. 3 at 41¢; No. 3 white at 42½¢@44¢; standard at 44½¢@45½¢; No. 2 white at 45½¢.

Gloster's Favorite, is a richly bred Duchess of Gloster hull; will weigh 2,100 pounds, is a grand good herd bull, and is an excellent breeder. Mr. Norton has used him and has some splendid calves by him now on the place.

The above two Cruickshank bulls are offered for sale by that eminent breeder, C. C. Norton, Corning, Iowa. These bulls are as good as has ever been offered for sale in this country and are good enough to head any herd in Europe or Ameri-ca. He also has a number of younger bulls, every one of which is a straight Scotch, and it will pay any breeder who wants a good herd bull to write him or go and see what he is offering for sale.

### Dispersion Sale of Mrs. C. S. Cross' Herefords.

On Wednesday, May 15th, at Fair Acres Farm, near Emporia, Kan., Mrs. C. S. Cross, of Emporia, Kan., will disperse her entire herd of Hereford cattle, a herd that under the management of Mrs. Cross has gained recognition as one of the leading herds of Kansas. That this is so is because Mrs. Cross knows full well the requirements of an animal for both breeding and show purposes and when founding her herd bought such stock as she knew from the performance of their ancestors and their ability to produce would breed on. Daughters of the great Albion, Wild Tom, Lord Saxon and Java were bought and from these Mrs. Cross has in seven or eight years grown a herd that today numbers seventy head or more. Mrs. Cross' love for a good animal is such that she has retained the very best heifers, developed them properly and retained them as breeding cows. The bulls from the Fair Acres herd have always brought good prices, those selling in the various Kansas City sales always bringing from \$200 to \$300. The best bulls obtainable have been used. Among these was Tranquility, Beau Real and last, but by no means least, is the present herd bull, Christy, that will be two years old in July. He was got by Keep On 2d and out of a Lord Saxon-Wild Tom cow. Some breeder wanting a great herd bull should look to him. There will be eighteen young bulls ranging from yearlings to two-year-olds in the sale, twenty-eight breeding cows, the balance being young heifers ranging from nine months to breeding age. It is only in dispersion sales that such good things as Mrs. Cross offers are found. The man wanting high-class breeding cows can do no better than here. There will also be show material found throughout the offering. Were it not for the hired help proposition Mrs. Cross would not part with this herd, as she is undoubtedly one of those who enjoys being among good cattle and likes to see that each year finds her herd producing better stock than on the previous year. It is when such breeders disperse that every man or woman who wants choice breeding stock should make arrangements to secure some of the fruits of that breeder's efforts. The young man who contemplates buying some foundation stock should also be on hand, as he will be taking advantage of the years that have been spent gathering together such a lot of useful breeding matrons as are found at Fair Acres. In succeeding issues more will be said of Mrs. Cross' Herefords. Those of our readers interested in good Herefords should write at once for a catalog. Kindly mention The Homestead when doing so.

### Splendid Scotch and Scotch-Topped Short-horns at Omaha, May 2d.

Numerous are the good ones in the McGavock Short-horn auction at South Omaha, May 2d. Mr. A. C. Huidekoper, of Meadville, Pa., is sending out twenty-one head from his high-class herd, one-third of which are Scotch and nearly all of which are sired by imported Scotch bulls, the most famous that has been brought to this country. Three bulls and eighteen females constitute the Huidekoper offering and chief among the bulls we would mention the straight Scotch statesman, a four-year-old that has been used in the herd. He was got by the celebrated bull, Avalanche, and was out of Imp. Sunflower 22d by Count Sunbeam. He is a red of grand scale, thickness, excellent lines and good finish of head and horn. Two Harding-bred show heifers, Anoka Fluff, a Scotch one of the Buchanan Lassie family and sired by a son of Whitehall Sultan, and Golden Garter by the Dustin-bred Baron of Springbrook, are attractive ones in any auction. Some six Scotch females, tracing to Imp. Louisa by Baron Kildale and of grand quality and general utility, are cataloged. They are sired by Imp. Avalanche, his son, Avalanche's Duke, and other good bulls. The females of the offering are in calf to Sidelight, a bull that cost Mr. Huidekoper \$1,000 when a yearling at one of the Harding auctions. He was got by Royal Wonder, a son of the great show bull, Justice, and was out of Imp. Lady in Waiting, the dam of the \$5,000 Ceremonious Archer. Imp. Master Archer and other prize winners. Mr. E. W. Cockrell, of Horace, Ind., consigns four bulls and eight cows and heifers sired by the Scotch bulls, Imp. Courier of Cluny, Imp. Palermo, Imp. Silver Victor and Valley Monarch. They are in calf to Lord Abbott 2d, a Cruickshank bull sired by Imp. Lord Abbott. A highly-bred Missie bull from an imported sire and dam is cataloged by Mr. H. G. Bowers, of Elmwood, Ill., and he is a herd header of the best type, character and breeding. The Duchess of Gloster bull, Roan Emperor by Imp. Emperor, is also consigned by Mr. Bowers, and both of these young bulls are very promising. These entries from the eastern side of the Mississippi are strongly reinforced by entries from Iowa and Nebraska, rendering this one of the most attractive Short-horn sales of the season. A full list of the consignors appears in the advertisement on page 29 and more particulars concerning other offerings will be given later. The catalog is now ready for distribution and will be mailed on application to Mr. W. C. McGavock, sale manager, Springfield, Ill.

### The Conner & Cockran Dispersion Sale.

A sale of good, useful Short-horn cattle that should attract all who are interested in this great breed is that to be held on April 30th, at Auburn, Neb., by Messrs. M. T. Conner and S. J. Cockran. It will be a complete dispersion sale, including two as good herd bulls as you will ever see in any two herds. Mr. M. T. Conner will consign twenty head, including twelve good cows, five of which will have calves at foot on sale day, and the balance are safe in calf to the great herd bull, Gloster Prince 231899, he by the great Prince Gloster, a massive red bull of the noted Duchess of Gloster family. His dam was Red Beauty, got by Earl of March, bred by Messrs. J. & W. B. Watt, belonging to their great prize-winning English Lady family. This we consider a richly-bred bull and should be sought for by some good breeder who is in need of a herd header. They will also sell the great cow, Sparswood Mary of London-

dale, a massive red cow by Velasco and tracing to Imp. Young Mary. Merry Flower is a fine three-year-old heifer by Merry Marshall, a Cruickshank Clipper bull by Imp. Merry Hampton, dam Flower Bell by Scottish King, a pure Cruickshank bull bred by Mr. A. Cruickshank. She will be sold safe in calf to Gloster Prince. Valeria, a great three-year-old by Robert, he by Rob Roy, tracing to the great Imp. Thistle Top. Her dam was Sparswood Mary of Londondale, tracing to Imp. Young Mary. There will be several young heifers and bulls in this offering, most of which are the get of his herd bull, Gloster Prince. Mr. S. J. Cockran will consign twenty head of Bates cattle, including his herd bull, Airdrie's Waterloo Duke 253512, he by Airdrie's Sharon Duke and having for his dam Water Girl 5th, tracing to Imp. Water Girl. Most of the younger stuff in this offering are sired by this great bull. The cows are mostly of Bates breeding and among them are some very choice individuals. Duchess of Wapsie is one of the good cows in this offering and was got by the great Wild Eyes Duke 196004. Her dam was 6th Duchess of Oaks, tracing to Imp. Duchess of Athol. The Bates Duchess tribe is the highest priced and most noted family of cattle on record. At the New York Mills sale September 10, 1873, fourteen head sold for an average of \$18,742 per head. Wapsie Wild Eyes was got by 2d Duke of Oaks, dam Wild Eyes 6th of St'd Plains, and traces to Imp. Wild Eyes Duchess. The Wild Eyes is one of the purest of the Bates families and the prices they have brought are second only to the Duchess and Oxford tribes. 6th Kirklevington of Wapsie is another of the good things to be offered. She was got by Harrington Prince. Her dam was Kirklevington 2d of St'd Plain, tracing to Imp. Kirklevington 11th. From the breeding already given in this field note you can form an idea of the class of cattle these gentlemen have been breeding. Address either of these men for a catalog and see just what they are selling. When writing please mention The Homestead.

### Gudgell & Simpson Sell Herefords on May 2d.

The offering of Herefords, consisting of twenty bulls and thirty heifers, to be made by Messrs. Gudgell & Simpson, of Independence, Mo., should bring out a good attendance. The sale will take place on Thursday, May 2d, in the fine stock pavilion at Kansas City, Mo. The bull end of the offering will be particularly strong, they being sons and grandsons of the great Beau Brummel, also a number by Paladin, one of the best sons of Lamplighter. Beau President, the son of Beau Brummel that was first-prize junior yearling at the World's Fair at St. Louis, will be represented in the sale by several sons that are of great promise. One of these, Beau Dominant, is out of a Lamplighter cow. He is just a year old and a desirable fellow fit to head some good herd. Another by the same sire and out of a Mill-tant dam will be found a fine prospect. His dam was a show heifer that was a winner in 1901. Her last calf, a year older, won second at the Royal and sold for \$500 at private treaty, going to the Big King ranch in Texas. Two sons of Fowler 8th are also listed. One of these, Bright Fowler, is out of Bright Countess, the dam of Bright Donald that won second as aged bull at the St. Louis World's Fair and is today one of the leading herd bulls in Messrs. Gudgell & Simpson's herd. Another by the same sire is Saturn. His dam, Sorosis 2d, was got by Beau Brummel and that she is a great producing cow was proven by her bull calf, Sagamore, that was the first-prize junior bull calf at the World's Fair, St. Louis. There are other as good bulls as these in the sale and from dams that are among the best producers in the Gudgell & Simpson herd. In the female section of the offering there will be found an excellent opportunity for selecting foundation stock or to get something choice to add to your herd. That the Gudgell & Simpson females do as well in the hands of others as do the bulls, was proven in the recent Nave sale, when Nutbrown 9th sold for \$1,975, she being of Gudgell & Simpson's breeding, her sire being a son of Lamplighter and her dam a granddaughter of Don Carlos. For this sale a number of Paladin heifers are listed. These Paladin heifers are making a great record for this bull. Others are by sons of Beau Brummel and all are bred to their leading herd bulls, such as Beau President, Bright Donald, Beau Donald 3d and other sons of Beau Brummel and Lamplighter. The entire offering is one of decided uniformity and all are of their own breeding, both the sires and dams having been bred by Messrs. Gudgell & Simpson. It is the intention of Messrs. Gudgell & Simpson to give the public an opportunity to get as good as they have produced and for this occasion they have selected carefully from their herd. Purchasers should improve the opportunity, as it is worth much to secure stock from such breeders. See page 29 for their advertisement and send for catalog.

Mr. F. F. Luther, of Grand Junction, Iowa, well known over this western country as one of the most competent live stock auctioneers, has just closed the most successful season of his life. Assisted by his son, Lloyd Luther, the two together have made 250 sales since September 1, 1906, to April 1, 1907. The senior member, Mr. F. F. Luther, has made 165 of these, covering seven western states, including Illinois, Indiana, Iowa, Minnesota, Missouri, Kansas and Nebraska. He has turned away sales from Ohio, Wisconsin, South Dakota, Oklahoma and other states, being unable to give these parties dates. He was the first man that ever sold a Duroc Jersey sow for \$300, was the first to sell a sow for \$1,500, and has the record of selling the highest-price Duroc Jersey gilt that has ever been sold, the same being a daughter of Savannah Belle, which brought \$2,000 in the S. R. Murphy sale a few months ago. As an authority on a Duroc Jersey pedigree he stands in the forefront, and the Iowa State Fair board of directors thought enough of his judgment to secure his services as a judge in 1905. He is an indomitable worker and is known as one of the most forcible auctioneers on the block. He is now booking dates for 1907-08, and will be pleased to hear from any of the boys who contemplate making a public sale.

## GREAT DISPERSION SALE OF SHORT-HORNS

..... To Be Sold At .....  
**AUBURN, NEBRASKA**

**APRIL 30, 1907**

**40 HEAD of Scotch and Bates Bred Cattle 40**

Included in this sale will be great herd bulls. Mr. M. T. Conner consigns 20 head of cows and heifers, most of them safe in calf or with calf at foot by his great bull, GLOSTER PRINCE 231899 by PRINCE GLOSTER, a red Scotch bull of Mr. Cruickshank's celebrated Duchess of Gloster family. Mr. S. J. Cockran will consign 20 head of Bates-bred cattle, including the great herd bull, AIRDRIE'S WATERLOO DUKE 253512, got by AIRDRIE'S SHARON DUKE, dam Water Girl, tracing to Imp. Water Girl. Four of these great cows will have calf at foot and the balance are all bred and safe in calf to AIRDRIE'S WATERLOO DUKE. This will be a great opportunity to buy good, useful Short-horns. They are from great milking strains and have great size and quality. Write these gentlemen for a catalog and then arrange to attend the sale, as it will be of interest to you.

### - ABERDEEN - ANGUS CATTLE

— TO BE SOLD —

**Wednesday, May 1, 1907**

**At Union Stock Yard Pavilion, Chicago, Ill.**

**25 BULLS AND 55 COWS AND HEIFERS**

The grandest lot of high-class cattle ever sold in Chicago for years—cattle from the leading herds of the country, where money was no object in buying the best. All the most fashionable families represented, Blackbird, Erica, Pride, Queen Mother, Heather Bloom, Drumin Lucy and other popular families. There are many animals in this consignment with splendid show yard records; bulls fit to head any herd in America; bulls that will sire market toppers; cows with calves at foot, and many will calve soon after sale; cows that have sold heretofore for more than four figures; heifers for the showman who wants something to add credit to his herd. This lot of cattle has been carefully selected as to quality and breeding. The consignment will please the old breeder, the young breeder, the new beginner and the ranchman who wants a carload of top-notch bulls. Remember I do not sell anything but the best. Remember the time and place. We want all lovers of good cattle to be there on sale day. Send for catalog. Mention The Homestead.

# GLENFOYLE SHORT-HORNS

AT AUCTION

MARSHALL, MICH., WEDNESDAY, MAY 8

75

SEVENTY-FIVE HEAD OF IMPORTED AND HOME-BRED SCOTCH  
and SCOTCH TOPPED SHORT-HORN CATTLE.

75

Representing the products of the most noted breeders of Scotland, Canada and the United States, and by sires that have demonstrated their worth in the show yards as well as in the breeding lot.

Sixty-five cows and heifers, twenty-five calves at foot and many of the cows will calve shortly after sale day.

Ten bulls, including two of my herd bulls, IMP. PENNAN COMMANDER 211984 and VILLAGE SULTAN 260235, one of the best sons of Whitehall Sultan.

This is undoubtedly the best offering of Short-horns ever made from Glenfoyle and in all respects will be one of the very best offerings of the year, such as should appeal strongly to anyone in the market for the most desirable specimens of the breed. Write for catalog, mentioning this paper.

COLS. WOODS, BELLOWS, JONES and COTTINGHAM, Aucts.

A. CHRYSTAL, Marshall, Mich.

## Last Call Bothwell's Clover Blossom Short-horn Dispersion.

On this page will be found the last announcement of the dispersion sale of the "Clover Blossom" herd of Short-horns owned by Mr. Geo. Bothwell, of Nettleton, Mo. It marks the distribution of a herd that, through its consistent winnings was made prominent over all America. It is also to be regretted that so young and so enthusiastic a breeder should drop from the ranks, as he had become noted as a cattle improver and a man who inspired confidence in the breed. We have in past issues called attention to the bulls and females that are to be scattered, and we sincerely hope to herds where they will be appreciated as they have at "Clover Blossom" Farm. In our final summing up, before the sale, we wish to say that the best breeders in the country will find stock here that is fit to enter any herd, add to and help improve same. The stock descends for generations through ancestors that have been known producers of stock that has done well in herds to which it has gone after leaving the "Clover Blossom" herd. During their day, every breeder was watching the performances of the lot of these two grand herd bulls, Grand Victor and Imp. Nonparell Victor, the bulls to which the present offering is indebted for so much of its individual excellence. Over fifty of the sixty lots to be sold will be found to have one of these bulls for sire or grandsire. Mr. Bothwell purchased several bulls to follow these bulls, but most satisfactory and the one bull to which he pinned his faith (and well he did so) is the bull, Golden Lavender, bred by himself and got by Grand Victor out of Imp. Sittytton Lavender 6th by Pride of the Morning. Golden Lavender should be appreciated for his individual excellence, his rich pedigree and most of all his ability as a sire of high-class stock. The man who buys him has little to fear, as he is a breeding bull absolutely sure and sells under such a guarantee. Mention has been made of the other bulls that go in the sale. Four are Cruickshank and Scotch, five are heavily Scotch topped and out of those great producing American-bred cows. There is herd bull material among these younger bulls that should please the most exacting. In the female end of the offering there is also found stock that has made money and reputation for Mr. Bothwell. The most ardent admirer of true Short-horn character will find in Mr. Bothwell's sale females that will please him. Their usefulness as producers will be fully demonstrated by their produce in the sale, both in animals of breeding ages, as well as the great number of calves that sell at foot. The men who want milking Short-horns will find them here, as Mr. Bothwell has been using a great many of these Short-horns in his dairy, milking them regularly and feeding the calves by hand on skim milk. The Cruickshank and Scotch sorts need no further mention more than to say that better are seldom found and only then where one or two are listed in some sale as an attraction. The famous Bothwell Rose of Sharon, Princess, Goodness and White Rose tribes have done their share to promote the Clover Blossom Short-horns. This is where Mr. Bothwell finds so many heavy milkers and it was from these tribes that a goodly number of his show cattle came. They have for generations been topped off with Scotch sires, and better producers are hard to find. Mention of a great many of these might be made, as they are individually good and are producers. They are not an old worn-out lot of cows, but on the contrary are mostly young and just coming to their most useful age. This is a consideration that should have much weight with the prospective buyer and he should also remember that it is only in dispersion sales that the seller lets go of all his good ones. Mr. Bothwell's catalog should be in the hands of everyone interested in Short-horns. He sells at Hamilton, Mo., on account of all trains on the C., B. & Q. stopping there. Hamilton is but a short distance northeast of Kansas City and directly east of St. Joe. See Mr. Bothwell's last announcement and if you have not already decided to attend the sale, do so now and arrange accordingly.

Attractive Aberdeen Angus at Auction, Omaha, May 3d.

The breeders making the Angus auction at Omaha, May 3d, constitute the most noted list of consignors that has recently been assembled for an auction, and we wish to place special stress upon the fact that they include more high-class show and highly-bred breeding bulls than has been seen in an auction in this country of the breed. The females also include some very noted ani-

## POLAND CHINA HOGS.

### Willowdale Herd.

Fancy Poland Chinas.

Young Stuff of Both Sexes For Sale.

—Send for catalog.—

Pure bred White Wyandotte cockerels, \$1.00.

HARRY R. SMITH,

Maynard - Iowa

WILCOX HAS BRED SOWS FOR SALE.

MR. Gerald Wilcox of McCook, Nebraska, offers a choice lot of Duroc Jersey and Poland China bred sows at reasonable prices if taken at once. Write him and mention The Homestead.

### 10 GOOD FALL BOARS

I WILL price these Poland China boars at very reasonable prices for the next 30 days. Extra large, heavy bone and as well bred as anyone needs. Am pricing spring pigs. Address, GEO. E. PATCH, Hannibalville, Illinois.

## POLAND CHINA BOARS

OF the big-boned growthy-skinned, nice head and ears, sired by a boar with a 10½-inch bone and out of mature dams. They are an extra good lot and will be priced right. Also one yearling that is hard to beat. A big-boned showy dog good enough to head a good herd. O'Brien Bros., Waukon, Iowa.

mals. Mr. W. A. McHenry, of Denison, Iowa, who won both premier championships at the World's Fair at St. Louis, and whose herd has won more prizes at leading shows during the last twenty years than any other breeder in America, consigns seventeen head to this auction. They are of the blood from which he has produced his prize winners, and include the great breeding cow, Coquette McHenry 4th, the dam of the champion, Gensor, and other prize winners, and Mr. McHenry also catalogs a son and daughter of this cow, as well as a daughter of the sensational champion, Barbara McHenry 13th, one of the few animals that ever defeated the celebrated Short-horn, Ruberta. The great list of Blackbird, Trojan Erica, Pride and Barbara bulls cataloged by Mr. McHenry renders this auction prolific with herd headers. Mr. C. J. Ott, of Peoria, Ill., who bred and sold the highest-priced bull in the recent International Exposition sale at Chicago, and who bred and exhibited Exillo, whose carcass was awarded the grand championship of the last International, sells brothers and sisters to these celebrities. Mr. J. B. Withers, of Missouri City, Mo., who bred the first-prize bull calf at the last International Exposition, includes on this occasion bulls from the same blood and that are just as good at the same age as the prize winner of last year. Mr. Geo. Kitchen, Jr., of Gover, Mo., includes a young bull that was a prize winner last year and he is one of the best that will be out this season. Mr. R. S. Williams, of Liberty, Mo., who won the female championship at the McGavock show and sale at Kansas City in 1905, consigns a sister to this champion and a cow in calf to the sire of the champion. A full list of consignors will be found in the advertisement on page 27, and breeders should not miss the opportunity to inspect under one roof the product of these famous herds. No such chance will be presented to obtain a stock or show bull at public auction this season. The catalog will be mailed on application to Mr. W. C. McGavock, sale manager, Springfield, Ill.

## Fairview Stock Farm.

Mr. C. E. McCollough, proprietor of the Fairview Stock Farm, of Humeston, Iowa, has been steadily breeding and buying Short-horn cattle and Poland China hogs for the last twenty years, until now he has some extra good individuals of both classes in his herds. Until recently his herd of Short-horns was headed by Lad's Lavender (246650) sired by Merry Lad out of Lavender Blossom, tracing to Imp. Victoria. A son of this bull is still on the place and will be sold right. The cows of this herd are all Scotch topped and are good individuals. His Poland China herd contains some extra good cows, some of which he has paid good prices to secure. This herd contains some of as good blood as can be found in any herd; such as daughters of All Dude, five times winner of blue ribbon at the Iowa State Fair; Chief Tecumseh 2d, Chief Tecumseh 3d and others of equal breeding. They are all large boned and good and lengthy, just the kind for breeders. See advertisement under "Too late to classify."

## LAST CALL

DISPERSION OF THE CLOVER BLOSSOM

# SHORT-HORNS

AT HAMILTON, MO.,  
MONDAY, APRIL 22D

10 BULLS

Cruickshank

Scotch Topped

See Golden Lavender.

50 Females

Cruickshank

Scotch

Scotch Topped

Some Imported

37 Cows sell with calves at foot or 37 are soon due to calve.

Imp. Nonparell Victor, sire of the champion, Nonparell of Clover Blossom; Grand Victor, sire of his dam; Imp. Wanderer's Last, and Golden Lavender are the principal sires represented. Among the Scotch sorts is Golden Lavender, one of the most satisfactory sires ever used at Clover Blossom. Imp. Ethel, Imp. Winifred 4th, Maid of Honor, Clover Blossom Wimple and Sweet Rose, all stock that I would not price were I not selling all. My Rose of Sharon, Goodness and White Rose tribes will be found good tribes from which to make selections. I am making an absolute dispersion and invite you to come and see the cattle. If they please you, buy. Your price is mine. Write for catalog, anyway, mentioning this paper.

GEO. BOTHWELL, - NETTLETON, MO.

# OMAHA'S GREATEST AUCTION of the SEASON

**175** High Class Herefords, Short-horns and Aberdeen Angus

TO BE SOLD AT SOUTH OMAHA, NEB.,

Wed., Thurs. and Fri., May 1st, 2d and 3d, 1907

**65**  
**Short-horns**  
Thursday,  
May 2d

From the herds of A. C. Huidekoper, Meadville, Pa.; H. Smith & Sons, Tobias, Neb.; Fremont Watts & Son, North Platte, Neb.; Robert Volker, Johnson, Neb.; E. W. Cockrell, Horace, Ind.; O. E. Osborn, Weston, Iowa; Geo. H. Mahr, Corning, Iowa; H. G. Bowers, Elmwood, Ill., and Geo. C. Hebron, Strawberry Point, Iowa. There are included straight Scotch herd heading bulls and very desirable Scotch and Scotch topped females, rendering it one of the most attractive Short-horn sales of the season.

**60**  
**Herefords,**  
Wednesday,  
May 1st.

From the herds of S. R. Waters, Poplar Bluff, Mo.; J. R. Owens, Savannah, Mo.; T. A. Reece, Savannah, Mo.; Warren Landers, Savannah, Mo.; H. J. Stinger, Allen, Neb.; G. J. Greenwell, Shelby, Mo.; Ernest Draheim, Emerson, Iowa, and Andrew Tonning, Newman Grove, Neb. There are show bulls, herd headers, bulls for the ranchman and farmer, and high-class females for the best breeders as well as beginners in the business.

**50**  
**Aberdeen Angus**  
Friday,  
May 3d

From the herds of America's Leading Breeders and Exhibitors. Their owners are W. A. McHenry, Denison, Iowa; C. J. Off, Peoria, Ill.; Geo. Kitchen, Jr., Gower, Mo.; J. B. Withers, Missouri City, Mo.; R. S. Williams, Liberty, Mo.; Marion C. Stone, Milan, Mo.; T. E. Morris, Stanberry, Mo., and W. H. Baldwin, Delavan, Ill. There are more high-class herd heading and show bulls, than I have ever cataloged for an Angus auction, including 6 Blackbirds, 7 Prides, 3 Queen Mothers, a Trojan-Erica, and several Drumm Lucys, Westertown Roses and other fashionable families, quite a number of which were winners at last year's shows. The females are also good and highly bred.

**Auctioneers**

Col. F. M. WOODS,  
Col. GEO. P. BELLOWES,  
Col. T. F. WATTS.

Remember the dates on which the different breeds sell, and for separate catalog of each breed, address,

**W. C. McGAVOCK,** Sale Manager,  
Springfield, Ill.

HORSES.

## TAYLOR & JONES'

### New Importation

#### ARRIVED MARCH 9TH.

Our barns are now filled with imported and home-bred PERCHERON, SHIRE and BELGIAN STALLIONS. Don't you know that PUBLIC SALES of stallions only indicate a cheap lot of trash, or that the sellers are men who CAN'T DO A BARN BUSINESS? Did you ever know a merchant to sell groceries at auction? Would you buy a gold watch at auction? We use no slick salesmen to sell our horses. They are good enough and our reputation so clean that we are selling more horses than ever before, which proves our prices are the lowest, our horses the best and our manner of doing business is satisfactory to our patrons. For catalog address,

## TAYLOR & JONES,

BOX 68,

WILLIAMSVILLE,

ILLINOIS.

PUBLIC SALE OF SHORT-HORNS, JUNE 4, 1907.

### OUT OF THE RING BUT STILL IN THE LEAD

We have been ruled out of the International Fat Stock Show ring in Chicago, and disbarred from the association privileges for one year.

BECAUSE we refused to submit to the decision of one judge, knowing that he, however honest and capable he might be, was selected solely by our only would-be competitor, we being refused another judge to act with this one, drastic action was taken by the superintendent of the horse department, barring us from showing, not only in the German Coach classes, but also in the Belgian and Percheron classes, in which we had several entries, and well prepared for the battle. It is currently reported among horsemen who are on the "inside," that the measures adopted to deprive us of a fair showing grew out of plans laid by an envious breeder. However true this may be, we have reasons to suspect that the generally recognized merits of the Oltmanns breedings and importations have created an uneasiness in certain quarters. In fact, we know of more than one preconcerted effort to gain from us by unfair means, that which cannot be fairly gained. In the show world we stand without fear of successful competition.

The individuality given each one of our animals places them in a class by themselves. In our breeding studies, both in Germany and America, every effort is made and with unvarying success too, to bring out most prominently those qualities of equine flesh that have given fame to the German Coach Horse and won for them a high place. On two continents the name we carry stands for excellence, in horse flesh. We are proud of our record as breeders and importers of German Coach as well as Percheron and Belgian breeds. Our buying facilities are unsurpassed. The senior member of our firm, Landshaftant O. V. Oltmanns, resides in the German Coach Horse district, and within four hours ride of the Percheron and Belgian Horse district of France and Belgium, and is ever on the lookout for the finest and best of the old country produces. We buy better horses at less expense than any other importer can possibly do, and for that reason can give you a better horse for less money than you can buy elsewhere. Write us for full particulars or call at our barns at Watseka, Ill., or Ft. Worth, Tex. Though ruled out of the ring we are still in the lead.

OLTMANN'S BROS., Leer, Germany, Ft. Worth, Texas, Watseka, Illinois.

## PINE RIDGE STOCK FARM

HORSES.

# FRANK IAMS'

has opened FOR SALE a "new barn" full of his "PEACHES AND CREAM" Percheron and Belgian stallions, (NOT SEEN BY BUYERS BEFORE.) They are his "FAMOUS PRIZE WINNERS" that you ALL saw at the Ills., Iowa and Neb., 1906, state fairs and his "TOP NOTCHERS" bought for the "1907 HORSE SHOWS." "Shy Ann, get into 'IAMS' BAND WAGON," all RAILROADS lead to ST. PAUL, NEB., (at 2 cents a mile.) Have a look and you will buy one of IAMS.

## 40 Percheron and Belgian Show Stallions 40

Among them are the FIRST PRIZE and SWEEPSTAKES PERCHERON and BELGIAN at 1906 Neb. state fair. The SECOND PRIZE WINNING four-year-old black Percheron stallion at 1906 Ills. STATE FAIR. The "HIGH FIVE" coming four-year-old Percheron stallions that won the "LION'S SHARE" of prizes at Ill., Iowa and Neb., 1906 state fairs. The first prize winning coming three-year-old black Percheron, wt. now 2080 lbs., and many others. IAMS' "1907 SHOW STALLIONS" are the "BEST EVER" WINNERS and SONS OF WINNERS in FRANCE and BELGIUM. They are three to

six years old, wt. 1,800 to 2,500 lbs. Ninety per cent blacks. Seventy-five per cent TON HORSES. All IMPORTED and STAMPED. DAD—Iams' stallions are SO GOOD they need not be "peddled" or put on the "auction block" to be sold, to get your cash business QUICK. IAMS will sell you CHOICE of ALL his stallions at from

**\$1,000 — TO — \$1,500**

(BAR TWO). All his stallions must be sold. His selling clothes fit ALL buyers. No man with money or bankable notes gets away from Iams. He buys, owns and sells more stallions than any man in U. S.; saves THOUSANDS OF DOLLARS to STALLION BUYERS. He is not in the stallion trust. Iams places \$1,000 or \$1,500 insurance.

**\$1,000 — SAVED AT IAMS — \$1,000**

Key, what a rich graft these "SLICK STALLION SALESMEN" are working on the honest farmer, selling fourth-rate stallions at \$2,000 and \$5,000. Mr. Buyer, see Iams' stallions yourself. Take no "GOLD BRICK STALLION SALESMAN'S WORD." Iams has "THE GOODS." His establishment is worth going 2,000 miles to see. He is knocking "high prices" out of the "Xmas tree." Iams "butts in" sells more stallions each year. George, dear! buy a stallion of Iams. His \$1,200 stallions are MUCH BETTER than our neighbors paid those Ohio men \$4,000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from BREEDERS, pays no BUYERS, SALESMEN or interpreters, has no two to ten men as partners to divide profits with. Iams guarantees to sell a better stallion at \$1,000 to \$1,500 than are sold to Stock Companies for \$2,500 to \$5,000 by SLICK SALESMEN or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee.

## TRUMANS' PIONEER STUD FARM

BUSHNELL, - - - - ILLINOIS

## Rhea Bros., Arlington, Neb.

Breeders of Percheron Stallions. We exhibited 11 stallions at late Nebraska State Fair and won 9 prizes as follows: 21 and 4th on four year-olds, 1st on three year-olds, 2d, 3d and 4th on 2 year-olds and 1st, 2d and 3d on yearlings. At Interstate Fair at Sioux City, Ia., we had 7 entries and got 5 places, 2d on 4 year-olds, 1st and 2d on 3 year-olds, 2d on 2 year-olds, 1st on yearlings. Our horses are home bred and acclimated, have size, bone, quality, are raised in pastures, not pampered with grain and drugs, thus insuring good service from the start. Every stallion sold under a positive breeding guarantee. Arlington is on main line N. W. Ry., 25 miles northwest of Omaha, eight miles east of Fremont.

DES MOINES, IOWA, APRIL 25, 1907.

WHOLE NO. 2597

## FALSE ALARMS IN THE COMMERCIAL WORLD.

Much amusement was caused by the utter failure of Wall street, a few weeks ago, to scare the public by its own real or pretended panic respecting the financial situation. The bulls and bears of the stock exchange have always taken themselves very seriously; and, up to five or six years ago, the country took the same view of the subject, and looked for trouble whenever Wall street saw or pretended to see clouds above the financial horizon. The first exception to this rule came several years ago at the time of the Northern Pacific flurry in stocks. The speculators of New York at that time discerned in the attitude of the government toward the Northern Securities Company a threat against the prosperity of the country, and worked themselves up into a frenzy because of it. By all the old rules, the business of the country should have experienced in consequence of that semi-panic a severe and protracted depression. Instead of causing such a disturbance, however, the Wall street crisis had remedial effects. It caused just enough liquidation in speculative circles and released just enough of the unsubstantial elements of industrial expansion and inflation to restore normal conditions, promote caution among investors and prevent disaster. Five or six years of the best times the United States ever experienced have resulted.

To all appearances, the recent Wall street flurry, instead of producing a general scare, will be equally beneficial. Certainly the country paid not the slightest heed to the frantic shouts of the speculators, but went cheerfully and confidently ahead with its business, relying upon the vast and constantly growing material and financial resources of the West and the enormous output of gold to maintain prosperity.

The grounds upon which the more recent attempt to create a financial crisis were chiefly based were related principally to the efforts of the national and state governments to regulate and control the railways. It has been claimed

and the railways have suffered severe losses from this cause, and anything tending to prevent the railways from borrowing money on their bonds or from selling stock to raise money to purchase rolling stock would have a serious effect upon all the material interests of the country. Indeed, anything tending to produce unfriendly feelings between the transportation companies and the general public would be disastrous to both, temporarily if not permanently.

Upon examination of the facts of the situation, however, it is apparent that these warnings are put forth largely for the purpose of preventing legislation and have little or no actual foundation. It is probable that putting some good sharp teeth into the interstate commerce law so as to make it effective against rebates, special rates and discriminations will not diminish, but actually increase railroad earnings. The two-cent fare laws may slightly reduce receipts from passenger traffic for a time; but, unless lower rates result differently in this matter than they have when freight rates have been reduced, there is every probability that very soon passenger traffic will be bringing more revenues than ever. The prohibition of free passes to officials and others will certainly increase railway earnings. The exposure of dishonest manipulations of railway stocks and bonds will have a tendency to compel railway officials to invest the proceeds of stock and bond sales in new equipment instead of appropriating the money to their personal use, as they appear to have done in some cases.

In fact, too, the railways are purchasing new cars and new rails for sidings and double tracks about as fast as the car shops and steel mills can turn them out. The United States Steel Corporation booked during March orders for about 8,000 tons a day in excess of March, 1906. This does not look like stagnation or depression. It looks like a demonstration that there is no more substance to these cries of alarm than there has been on like occasions in the past; and that agriculture, manufactures and

commerce are all in so healthy a state that the false alarms of the stock market are powerless to injure them.

## LENGTH OF HOURS ON THE FARM.

The following communication has been received from a Kansas subscriber:

Last year you had a good deal of advice to give relating to the length of days that the average man should put in on the farm. In a general way it may be said that your paper, if I remember correctly, stands for the comparatively short day. At first, I thought you were entirely off, but am really coming around to your way of thinking. Of course, we must all concede that during the spring, summer and fall, farmers must be up by 5 o'clock in the morning. When this is the case, I am coming to believe that the work can be kept up just as well if it is planned to finish the day about 6 or 6:30 p. m. as if the work is trailed along until 8 or 9 o'clock in the evening. If horses are sensibly worked, they can put in a full day in nine or ten hours and it is much more satisfactory to all concerned to finish up the day's affairs in good time than it is to labor until dark.

It is so difficult nowadays to obtain any kind of help that I think it is up to farmers to make farm life and work a little more attractive and one way in which this can be done is to shorten the hours. The result of my observation is, that the man who handles his work so as to get everything out of the way in good time in the evening has less difficulty in obtaining help than those who keep everlastingly at it.

It was not our intention to bring this subject up again, it being our belief that the matter was sufficiently thrashed out last year. However, as this subscriber is responsible for its re-appearance we again come forward with our views on the subject.

We indorse the views expressed in this communication although in doing so we realize that this view diametrically opposes the views of many of our subscribers. We have neighbors who are thoroughly fixed in their belief that the labor of the farm can be kept up only by putting in fifteen or sixteen hours daily. They start at five o'clock in the morning and end the work at eight or possibly as late as nine o'clock at night. From the ranks of these we expect no converts to our way of thinking. However, to the younger men starting out for themselves, we believe we are

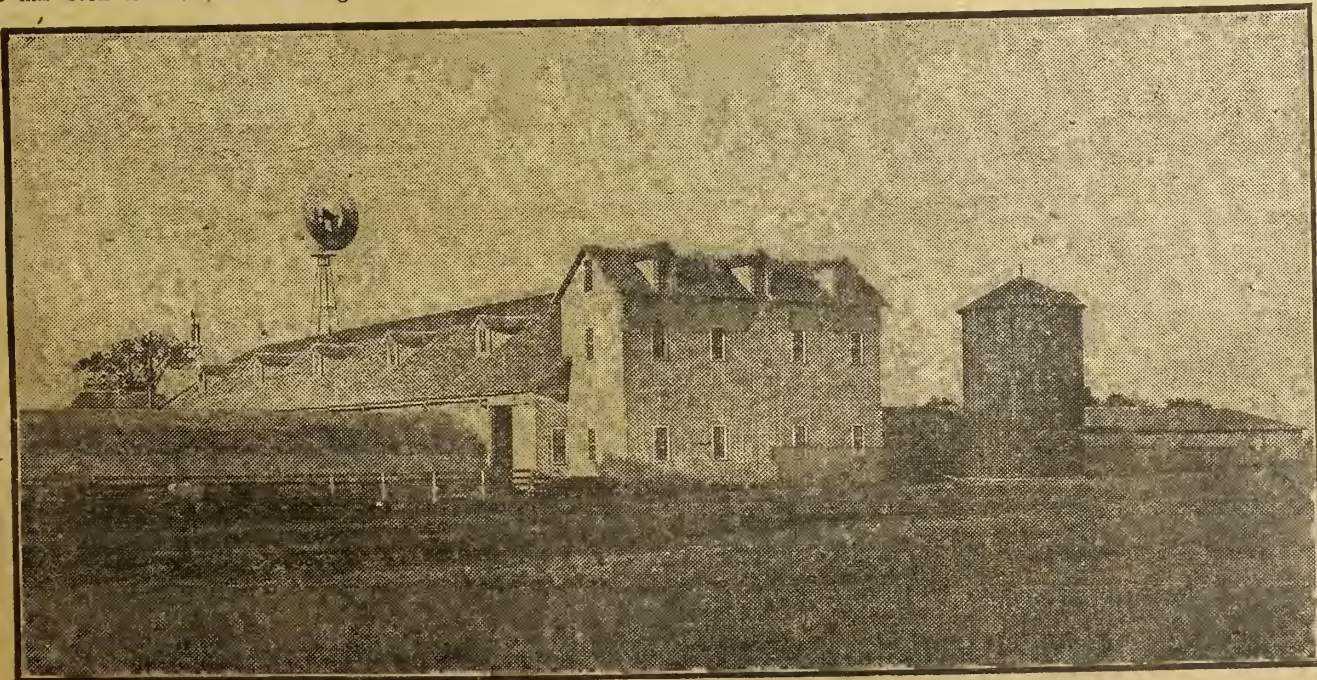

acting wisely when we try to disseminate the doctrine that it is more profitable and certainly much more pleasurable to adopt in one's system of work, the so-called shorter day.

Our theory is that a team can be made to do a full day's work in ten hours and even in nine where live stock must be cared for night and morning. This is especially true when horses are performing the heavy labor of disking or harrowing, or are in any way preparing the ground for crop. Instead of sending them through until six o'clock or six thirty and looking after the stock when the field work is done, we think it is more preferable to drive just a little faster and unhitch an hour earlier. Where several teams are at work it is not necessary to shorten the days of all, but we do think that it pays to let one or two men knock off earlier to care for the stock. Where all work right up to six or six thirty it simply means that the day's labor will be carried well on into the evening or even into the night. Under such circumstances it is not surprising that men seek work in the cities and there undertake to perform much more irksome labor in order to get the advantage of the shorter day.

We do not mean to insist that labor of the farm can be put on exactly the same basis as labor in the city, because of climatic conditions, but we do say that it is entirely practicable to adopt a general policy which results in getting all forms of labor finished up at least by six thirty p. m. There will be exceptional days, bear in mind, when this cannot be done, but during fine weather when things are running smoothly it is a much wiser policy than that of trailing out the work an hour or two later.

## PERSISTENCE IN ESTABLISHING ALFALFA.

On certain soils in the corn belt alfalfa produces a thrifty growth from first seeding, but in many cases the first crop grows somewhat sickly and if not plowed under finally dies. In many cases of this kind the grower gives up the battle, thinking that his land is not adapted to the growth of this crop. Now, an experience of this kind is not an indication that a soil will not produce good alfalfa. There might be one or two factors operating to make the crop grow weakly or kill it out altogether. In the first place, land that has never produced alfalfa may be almost entirely lacking in bacteria; that is, the organisms that live on the roots of this crop and contribute apparently to its healthy growth. If this is the trouble, and this alone, the same land should be re-seeded after the first weak crop is plowed under.

Buildings at Glenfoyle Farm, the property of Mr. A. Chrystal, of Marshall, Mich., the home of the noted Glenfoyle Herd of Short-horns. See field notes.

that the searching investigation made by the national bureau of commerce and labor into the capitalization of railways; the enactment of the rate bill by congress; the passage of two-cent fare bills by the legislatures of several states and other restrictive measures enacted or proposed were calculated to deter capital from investing in railway securities and thus prevent the transportation companies from adding to their equipment of cars and locomotives. The shortage of cars has been very great for the past twelve months, especially on the trans-continental lines. Shippers, consignees

This is advised because these organisms seem to gradually increase from the time the alfalfa seed is first sown.

Another condition that is not specially favorable to the growth of alfalfa in the beginning is when the soil is somewhat hard or waxy in its nature. This is especially true when the subsoil is of this character. Now, it frequently happens, under such circumstances, that plants will develop and send down roots three or four feet, but when that stage is reached the crop begins to turn a sickly yellow and if it is not plowed under it will probably die out altogether.

In such a case it is usually advisable to plow the land, but bear in mind that the roots of these delicate plants may have done something by way of fitting the soil for the crop later on. Upon their decay they render the soil more porous and therefore make it much better adapted to the production of vigorous alfalfa roots. This being true, it is not uncommon to find instances where the first crop on a given field utterly fails after one has been patient with it two or three years, and yet the second effort to establish a stand is crowned with absolute success.

There is a very large part of corn-belt land that is a little bit close in texture for the full development of alfalfa roots, and for that reason it must be humored a little, and there is nothing better to humor it with than to make a trial with alfalfa itself. Of course the seed is dear, it is true, and no man cares to experiment on a large scale with a crop that he knows is not going to bring in a profit. Alfalfa is so valuable, however, when it is once established that men who have grown it to any considerable extent claim that it is quite worth while to try the second time if you do not get a stand in the first instance.

#### SHORT-HORN BREEDERS BARRED FROM RECORD.

The directors of the American Short-horn Breeders' Association held an important meeting on April 12th last, at which time resolutions affecting W. M. McLemore, of Kearney, Neb., and W. O. Merz, of Monticello, Minn., were passed. The resolutions as applied to Mr. Merz are as follows:

Whereas, It has been represented to the board of directors of the American Short-horn Breeders' Association that one W. O. Merz, of Monticello, Minn., has sold a cow to one Judge D. B. Searle, of St. Cloud, Minn., by him, the said W. O. Merz, represented to be Rose of Marchmont, Vol. 45, page 646, of the American Short-horn Herd Book, got by Indian Nobleman 138666, when in fact said cow, Rose of Marchmont, had died before such sale; and,

Whereas, The said W. O. Merz was duly notified of the hearing of the said charges by the board of directors of the said American Short-horn Breeders' Association, to be held on the 11th day of April, A. D. 1907, at the hour of 9 o'clock in the forenoon, at the office of the secretary of the said American Short-horn Breeders' Association, in the city of Chicago, county of Cook and state of Illinois; and,

Whereas, The said W. O. Merz has failed to appear at the said meeting, but makes default; and,

Whereas, Evidence, oral and documentary, has been submitted to and heard by the board of directors of said American Short-horn Breeders' Association; and,

Whereas, Upon due consideration of said evidence by the said board of directors the said W. O. Merz has been found guilty of the said charge, and the said board of directors does hereby convict the said W. O. Merz upon the said charge; now, therefore he is

Resolved, by the board of directors of the American Short-horn Breeders' Association, That the said W. O. Merz shall never be allowed to enter another animal in the American Short-horn Herd Book.

The charges made against Mr. McLemore and the resolutions adopted by the board of directors are as follows:

Whereas, The following charges have been made against one W. M. McLemore, of Kearney, Neb.:

1. That in a certain printed sale catalog of viz.:

Short-horn cattle held on Dec. 30, 1905, at Gothenburg, Neb., he, the said W. M. McLemore, did make, among others, the following statements and representations: "Secret Girl, calved July 6, 1903; got by Charming King 157835, out of Golden Belle by Golden Phyllis 131975; Mollie Rhodes, calved June 10, 1904, got by Robert 167606, out of Golden Belle by Golden Phyllis 131975, and Kearney's Duke, calved May 30, 1905, got by Chief Knuckle Duster 172871, out of Golden Belle by Golden Phyllis 131975, and all bred by James Francis, of Rhodes, Iowa," which pedigrees, and each of them, were false and untrue, the said Golden Belle never having given birth to the said Secret Girl, Mollie Rhodes and Kearney's Duke, or any of them, and the said James Francis never having bred or owned the three animals aforesaid or any of them.

2. That the said W. M. McLemore knowingly and intentionally caused to be recorded in the American Short-horn Herd Book false pedigrees of the said animals, Mollie Rhodes and Secret Girl, purporting to be signed by the said James Francis, when in fact such pedigrees had never been signed by the said James Francis.

3. That the said W. M. McLemore knowingly and intentionally caused to be recorded

in the American Short-horn Herd Book a pedigree of Lady Belle, got by Young Scotchman 66688, out of Secret Girl, bred by James Francis, purporting to be signed by the said James Francis, when in fact the said James Francis never signed the said pedigrees, nor bred nor owned the said animal.

4. That the said W. M. McLemore knowingly and intentionally imposed fraudulent pedigrees upon the American Herd Book, in that he caused to be recorded therein the pedigree of a certain cow named Wall Flower's Girl, calved April 14, 1901, by Baron Wilderburg 125982, out of Hillsdale Lady 27th, by Spartan Chief 5303, and a certain other Short-horn cow named Wildflower Maid, calved March 6, 1902, by Robert 167506, out of Hillsdale Lady 27th, by Spartan Chief 95303, both bred by John Marsh, of State Center, Iowa, when in fact the said Hillsdale Lady 27th died before the 1st day of February, 1902, and never at any time was in the possession of or owned by a person of the name of John Marsh.

5. That the said W. M. McLemore in the sale catalog of Short-horn cattle held on December 30, 1905, as above stated, offered for sale Gertrude 7th, calved August 27, 1901, by Broken Tall 126205, out of Gertrude 6th, by President 120545, when in fact Gertrude 7th died in the month of April, 1905.

6. That the said W. M. McLemore in the catalog aforesaid advertised for sale on December 30, 1905, a bull named Lad For Me, calved April 6, 1905, got by Charming King 157835, out of Grace Lide, by Baron Wilderburg 125982, when in fact the said Grace Lide was not with calf on the 16th day of February, 1905. And,

Whereas, The said W. M. McLemore has been duly notified of the said charges, and that the board of directors of the American Short-horn Breeders' Association would hear the said charges and evidence in support thereof on the 11th day of April, A. D. 1907, at the hour of 9 o'clock a. m., at the office of the secretary of the said association, in the city of Chicago, Cook county, Ill., and that the presence of the said W. M. McLemore was desired at said hearing by the said board of directors; and,

Whereas, Although duly notified of the said hearing upon the said charges as above stated, the said W. M. McLemore does not appear, nor does any one appear in his behalf, but makes default; and,

Whereas, The board of directors of the said American Short-horn Breeders' Association, having heard the said charges and evidence, both orally and documentary, in support thereof, doth find that the said W. M. McLemore, of Kearney, Neb., is guilty of said charges and of each of them, and the said board of directors does hereby convict the said W. M. McLemore of the same; therefore, be it

Resolved, by the board of directors of the American Short-horn Breeders' Association, That the said W. M. McLemore shall never hereafter be allowed to enter another animal in the American Short-horn Herd Book.

Whereas, One W. M. McLemore, of Kearney, Neb., has by the board of directors of the American Short-horn Breeders' Association, been found guilty of certain charges, as will more fully appear by the resolutions this day adopted by the said board of directors; now, therefore be it

Resolved, by the board of directors of the American Short-horn Breeders' Association, That the said resolution be published in the succeeding volume of the American Short-horn Herd Book and in the agricultural journals of the United States.

Whereas, One W. M. McLemore, of Kearney, Neb., has this day been found guilty of certain charges by the board of directors of the American Short-horn Breeders' Association, as will more fully appear by the resolution duly adopted by the said board of directors; and,

Whereas, In the opinion of the said board of directors, not only for the protection of this association, but of the innocent public, the said W. M. McLemore should be prosecuted under the laws of the state of Nebraska; now, therefore he is

Resolved, by the board of directors of the American Short-horn Breeders' Association, That the assistant secretary of this association be and he is hereby instructed to submit to the proper prosecuting or district attorney of the state of Nebraska any and all evidence which he may have bearing upon the offenses committed by the said W. M. McLemore in said resolutions set forth.

#### Straight Corn Checking.

To the Editor of The Homestead:

In a late issue of this paper the two-row cultivator was brought out again. The most serious objection to the two-row cultivator is crooked planting. Please let me state a method we used last year and we had the straightest rows the checked way we ever had. Only a small percentage of workmen can draw the wire so the tension is always the same. The majority will do fairly well, but some fields are a sight to behold. The point I wish to emphasize is this: If the planter is perfect in its work, and all are supposed to be, then the only thing for the operator to do is to see that the pole at neckyoke is carried the proper height from the ground. This will depend on the size of team used. If the planter is perfectly adjusted and checks correctly, the only reason for crooked checking must be unequal stretching of the wire or a very light wire, causing side draft by pressing or causing one side of planter to go deeper in the ground than the other side. If the end of the pole at neckyoke is on side of marker row where the chain is, there is just so much side draft and the hills will be dropped just that much from a true line if the checking is otherwise perfect. If the planter drops correctly and all side draft is eliminated, there is only uneven

## CONGO ROOFING

On flat roofs or steep roofs, on old shingles or new buildings, Congo gives roofing service longest for the least cost.

Let us send you a sample and you will understand why. You will see then that for quality, Congo has no equal. It is proof against the hottest sun or the chilliest cold snap or the most drenching rain. As easily laid as a carpet.

Write for that sample now.

BUCHANAN-FOSTER CO.,

538 West End Trust Bldg., Phila.,

Chicago and San Francisco.

stretching of chain to cause crooked planting.

We took a piece of smooth wire about ten inches long and twisted one end around anchor stake above step and one below. This would leave enough to make a loop two or three inches long. We did this with both anchor stakes. Now get one or two fifty pound spring scales. If you have two you will have one for each end of wire; if you have one you will have to carry this with you (we used only one). Hook your spring scale in loop of wire on stake and draw up the necessary pounds, say forty pounds for fields sixty rods or over and twenty-five pounds for forty rods or under. Grasp the anchor stake with other hand and only steady it enough to hold this perfectly perpendicular. Draw up the required number of pounds (never draw more than the required number) and set stake. Stake should be set at least forty feet back of center of planter, even if you have to go through a fence to set your stake. Now if all other conditions are perfect this should give you perfectly straight rows the way the rows are checked. The little spring scale is unerring in its judgment and cannot fail. When you have planted a dozen rows get in on field ten or fifteen rods from end, dig up the hills and see if they are perfectly in line. If not see if pole is carried too high or too low; discover the fault wherever it is and have it corrected. This should insure the most perfect checking and corn should be straighter the checked way than the way planted.

I see no reason why the two-row cultivator should not be the coming plow if the planting is perfect. An old bail from a wash tub will make a good handle for spring scale. A Subscriber. Saude, Iowa.

#### The Two-Row Cultivator.

To the Editor of The Homestead:

I notice that you desire information relating to the two-row cultivator. I used one last season and found it highly satisfactory indeed. I tilled eighty acres of corn myself with three horses, and believe that I could have handled ten or fifteen more.

It is no more difficult to operate a two-row than a single-row plow, and a man with three horses can cultivate eighteen acres a day just as easily as his neighbor can cultivate nine acres with the single-row plow. I crossed corn that was planted on stalk ground that wasn't extra straight and yet the cultivator did good work. I think that the two-row plow is the coming implement in this locality. I raised 4,800 bushels of corn without any extra help. P. H. Keiser. Blackhawk county, Iowa.

I recently read in your paper what Mr. John Crick said about two-row plows and would like to know more about them. I will say that I bought one last year and it proved a success every way. It is a good plan to buy one on a week's trial.

In the first place, burn the corn stalks, as no two-row plow will do good work in stalks or trash. I use the three shovels in each gang or twelve in all, and the first time through the corn the two front shovels were set ten inches apart. That was as close as I could have them and not stop too much. I could average ten acres the first time and nine or ten the second time across, and after that I could plow from twelve to fourteen acres

a day, according to the weather. The first time through it pulls as hard as a sixteen-inch riding stirring plow. It needs three fourteen or sixteen hundred pound horses to pull it the first couple of times; after that it pulls a horse easier. One man can tend sixty-five or seventy acres in a season all right and do as good work as two men with one-row plows.

Get a plow with the seat at least four feet behind the first shovels; some plows have the seat too far ahead. Get also a balance frame and long distance axle, as it is pretty heavy on the wheels. I got the three-inch tires. I work the two inside gangs with my feet and the two outside have long handles like a walking plow to work with the hands. I drive with the lines around my shoulders. The gangs should work up and down independently and sideways all together. By all means buy one on a week's trial and if the agent comes out put him to plowing where there has been manure and heavy stalks turned under, and then ask him how he likes it. The agents of any make will tell you that they will work well any place, but don't believe it. However, under good conditions they are a grand success.

Clinton Co., Iowa. E. L. Hastings.

#### Mr. King on the Road Drag.

To the Editor of The Homestead:

Allow me to congratulate you on the wisdom of your statement in a recent issue, which is as follows: "The first advice that we would offer anyone about to make his first road drag is to make it as simple an affair as possible."

This is most excellent counsel for several reasons. For one, if a man decides to knock together something that will do, he will generally set at it immediately, and as a result secures an improvement in his road without delay. Again, if he uses a two-inch auger and wedges the stakes securely he will find that a few feet of sharpened steel on the front slab is about all the addition he needs.

I am convinced, after years of observation, that the more thoughtfully evolved "fixings" and the more expense put into the building of a drag, the more likely it is to be unsatisfactory. I have seen a number. And finally, after several years of experiment in building drags of different materials and of various shapes, my neighbors (whose advice and assistance I have had) agree with me that the original split-log idea is best. It is best because it will do anything a drag should be expected to do. It is the best because it is the simplest, and, other things being equal, the simplest is always the best. And it is best because it is the cheapest. Let me also indorse the injunction to make the drag of light material. D. Ward King. Maitland, Mo.

#### Aids to Intensive Cultivation.

With the rapid adoption of more intensive cultivation and scientific methods of agriculture, there is need of tools that are suited for the work involved. "Special purpose tools" are shown and their particular uses described in a valuable and attractive forty-eight page book, published by the American Fork & Hoe Co., Cleveland, Ohio. Our readers are offered free copies while the present edition lasts. See advertisement on page 10. Write soon and mention The Homestead.

## Farm Furrows

Turned by a Practical Farmer.

The strongest crop in the land—onions.

A valuable side partner on any stock farm is a good Scotch collie.

A good many farmers sold potatoes last fall and now are buying the same ones back at twice the price.

There should be plenty of excitement to keep the wildest boy on the farm when the shoots begin to shoot.

The farmer is the only business man who does not seek out a market for his produce. Negligence of this sort in other lines proves suicidal.

A poultry expert claims that oyster shells have little value as a grit supplier in the poultry pens. Their shells are said to disintegrate and revert to their former state of shell lime. Crushed rock is the best grit food.

The tall men in Texas ask the legislature of that state to require nine-foot sheets in hotels and the request will be enforced by the law now. Travelers should wear a happy smile at breakfast in that state after this.

An old farmer once sarcastically said that he thought that boys who went to agricultural colleges learned a great deal more about farming than people imagined, because so few of them ever returned to the farm. The fact is that fully half of the graduates from our best agricultural colleges go back to the farm and make stanch, influential citizens in their community.

Dispatches from Argentina, S. A., state that the outlook for the corn crop is very dubious, due to a persistent drouth which has greatly damaged corn plantations to the extent of destroying half the crop in some areas. The surplus for export will be very small which will probably affect the market in this country in a favorable way for the producer. Argentina raises about one-twen-

tieth as much corn as the United States.

All kinds of farm implements should be examined in every part at least once a day when they are in operation and thoroughly tightened up with a wrench. I believe in tightening things before they get loose.

There are a lot of young fellows who reach the climax of their ambitions when they get possession of a driving horse and a new buggy. The biggest business deal they are capable of engineering is one where a \$25 cutter of but one season's use is traded in on a new buggy for a dollar whip and a gaudy lap spread.

The more a man studies the live stock market and its relation to supply and demand, the more he is convinced of its complexity. There are only one or two men in the country who can forecast the condition of prices in the corn belt, and this information is secured at a considerable cost of time and money.

Agriculture now can boast of being dignified with a cyclopedia of American agriculture which has recently been published. It is from the pen of the noted writer of farm literature, L. H. Bailey. Numerous fine illustrations of farm scenes brighten the pages and altogether the book is a store-house of information.

A neighbor's dog was an unwelcome visitor at our place for months. Nothing that I could do would keep him away. I stopped him at last and all I did was this: I put him in a large barrel, put the top on and then rolled him down a quarter mile hill. When I let him out I could just distinguish a yellow streak going across the fields.

A nuisance as regular as a rainstorm is a leaky barn or granary roof. If the horse or cow stalls are not floored the trouble is further aggravated. A leak over the grain bin is worse than one in the floor by far. A day or two spent in replacing rotten shingles will be an investment of time that will bear a hundred per cent in returns.

How inconsistent and short-sighted, indeed, for men to invest money in lines of business with which they are absolutely unfamiliar and expect that, in the hands of men who themselves have as a class failed even as specialists, there is a possibility for making big returns or even fair ones. One business is not so very much more profitable than another.

Some of the best work horses I ever owned or know of were of the kind that would not put on flesh. Their ribs would show regardless of the amount or kind of feed they received. In the collar they would wear out any horse, especially one in better flesh and in hot weather. I like to see a nice amount of flesh on a horse, but not so much that the muscles become soft.

When a man moves to a new country he takes with him some ideas more or less not adaptable to his new surroundings. While it is well and proper to be progressive, up-to-date and all that one must bear in mind that there are surely men before who have been as progressive and that the present methods have survived as the best fitted to the conditions.

About 5,000 species of bees are said to exist. Bees stand in social and constructive ability at the head of the insect kingdom and it may be presumed that this is why they exist in such numbers and variety. It is probably true, as we are told by scientists, that we can never fully realize the important influence which bees exert upon the plant world by pollinization.

Stallion owners should not delay the matter of having their animals recorded with the department of agriculture of their respective state if there is a law to this effect in force. There was a pretty general agitation of the law in corn belt states this past winter. Wisconsin and Iowa require this procedure of stallion owners and in the latter state a fine of \$100 is imposed for failure to comply.

There is a certain amount of equipment necessary in the house, to conduct its affairs efficiently, as well as on the farm. We are not living in the simple days gone by. The housewife has as much necessity of labor-saving machines as the husbandman of the farm. A great

### This Little Pig Went to Market and Got Top Price

Clean hogs are healthy hogs and make profit. *42 State Agricultural Colleges* use Zenoleum on their hogs, and unhesitatingly in Bulletin after Bulletin, recommend you to do the same thing. So do America's most successful hog breeders.

## ZENOLEUM

### Makes Hogs Wallow in Profit

Disinfectant destroys disease germs, makes sanitary quarters, prevents contagious diseases from taking hold. Famous for warding off and avoiding hog cholera. As a dip, it kills lice, cures mange, eczema, scours, sores, scurvy, canker, surfeit and wounds. *Non-poisonous when taken inwardly*, and is a sure relief from intestinal worms.

**Most Dealers Everywhere Sell Zenoleum.**

**At All Dealers**—Small size, 25 cents; Quart, 50 cents; Half gallon, 90 cents; One gallon, \$1.50; Five gallons, \$6.25—or we will deliver one gallon or more, charges paid, to your station. **Ask Your Dealer First.**

**Free Booklet Veterinary Adviser**

64-page book for Stockmen and Farmer's written by Agricultural College Authorities. *Positively free for the asking. Send postal quick.*

**OUR POSITIVE GUARANTEE**

If Zenoleum is not all we say it is, or even what you think it ought to be, you can have your money back. No talk, no letters,—just money.

many men do not realize this. It is a false economy to do without burden reducers until the marks of decrepitude appear.

A good many farmers have gone out of business on good land simply because they did not know where "they were at" so to speak, in financial affairs. Some individuals let the other fellow keep the books, and eventually let him keep their property, too, for his trouble.

All my life I have watched the workings of that old saying, "Sky red at night, sailor's delight; sky red in the morning, sailor's warning," and while I have no faith in signs, I am wont to believe that it is about as sure a forecaster of weather on the morrow as any indication not based on science.

Already the effect of the rigid meat inspection laws is gratifying and foreign countries subjecting our meat exports to careful examination have found no fault with them since the different meat products are properly labeled and rightly represented. Uncle Sam is paying over a thousand new salaries for the new service.

When a man hauls two loads of grain to market in a day he has made an initial expense of from two to four cents a bushel in getting the same on the market. As a rule a man does not consider this time worth a great deal, but when there is always plenty of repairing, fence-making and preparation to attend to a farmer's time is always valuable.

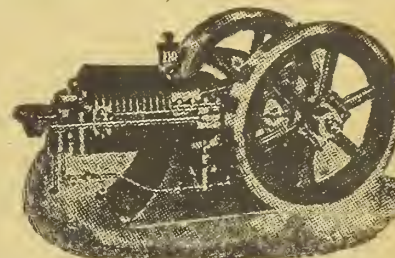

Here is a problem in simple economy: A farmer recently sold a load of wheat for sixty-eight cents a bushel and in exchange received a ton of bran at \$22.50. What was his object? I figure a ton of wheat is thirty-three and one-third bushels which at the above price is \$22.66 2-3. It looks about like an even exchange with the cost of hauling and time thrown in.

### Something About Alfalfa.

To the Editor of The Homestead:

Your recent invitation to write something about alfalfa prompts these few lines. I have raised it in southern Kansas and found that some of the land produced it well and some did not. I have lived in southeast New Mexico one year, and will deliberately say that this is the best alfalfa country that I have ever seen. It grows to perfection here. Last summer I cut mine five times and it furnished good green pasture all winter, and where it was not pastured it is six inches tall now and perfectly green.

It is possible to cut eight tons per acre in one season. I sold mine for \$10.50

**GADE AIR-COOLED GASOLINE ENGINES**  
Sizes 2, 3 and 6 H. P.

We keep our cylinder cooler than it can be kept by water or oil. We have no frozen up water jackets or burst cylinders in cold weather like the old styled water cooled engines. Write for catalog and price list.

per ton in stack this last winter. This is considered a great fruit country, but I believe I prefer alfalfa on account of producing the first year and it is from five to seven years before fruit comes into bearing. I know of nothing that will beat it anywhere. Three cuttings of hay and one of seed pay well, the second one seed, which is liable to beat five cuttings of hay, that is, the seed.

August or September is considered the best time to sow, though many sow in the spring. I think the drill the best for seeding. This is a new country and undeveloped, but I think it will be a great stock-feeding country when developed. I certainly believe in alfalfa for profit. We have about twelve inches of rain during the year, sometimes twenty inches, mostly in April, June and July. Our winters are mild. We had one freeze and one twelve-inch snowfall this winter, which was early. Since then we have wild flowers in the field and the willows in leaf. This is an irrigation country from artesian wells and also from rivers. The dry summers favor curing the hay without loss from rain.

Eddy Co., N. M.

D. M. Elder.

## Driver or Worker

To do his best, a horse needs the whole food value of his ration. To produce flesh and milk this is also true. In a heavy fed animal only about half of the food is usually digested, in an unthrifty animal it is less.

Dr. Hess Stock Food the prescription of Dr. Hess (M.D., D.V.S.) increases the powers of digestion and assimilation and makes every pound of grain yield a larger amount of profit than is possible without it, besides curing the minor stock ailments. When we remember it is not the food consumed but the food digested that produces the profit, we comprehend the necessity for tonics. Professors Quilman, Winslow, Finlay Dun and all the leading medical authorities recommend the Hitter tonics in

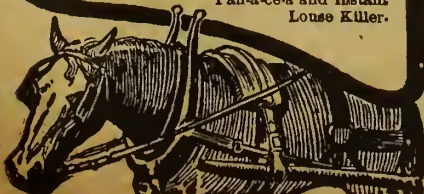

## DR. HESS STOCK FOOD

for improving digestion, iron for the blood, nitrates for expelling poisonous material from the system and besides it is sold on a Written Guarantee.

100 lbs. \$5.00  
25 lb. Pail, \$1.60

Where Dr. Hess Stock Food differs in particular is in the dose—it's small and fed but twice a day, which proves it has the most digestive strength to the pound. Our Government recognizes Dr. Hess Stock Food as a medicinal tonic and this paper is back of the guarantee.

If your dealer cannot supply you, we will.

## HONOR IN MAKING UP PEDIGREES

Elsewhere in this issue we give the charges preferred by the directors of the Short-horn Breeders' Association against two of its members and the resolutions which bar these men forever from recording an animal in the American Short-horn Herd Book.

Assuming that the charges are true, it brings us face to face with a very serious situation. The whole pedigree business is based entirely on honor, because pedigrees are ordinarily made out in the quiet of one's sanctum. The seal-awag is given a splendid opportunity to deceive, though the investigations recently made by the Short-horn Breeders' Association would indicate that after all, honesty is the best policy, because the end in most cases is humiliation and disgrace.

We give space for recording this event, not because we believe that any considerable number of pure-bred breeders need it as an example, but rather for the benefit of those few who are inclined to use their guessing propensities when it comes to the matter of making out a pedigree. Although in this case cattle-men are caught, the lesson to be drawn fits breeders of all classes of stock, and while no man rejoices over the punishment of a fellowman, yet it is hoped that these two instances will sufficiently warn those who are loose in their affairs relating to the pedigree business, so that the near future will not record similar events of this character.

## THE GEORGE W. CATT BEQUEST.

The late eminent New York engineer, George W. Catt, remembering the hardships of his own youth and grateful for the opportunities afforded him at his alma mater, the Iowa State College of Agriculture and the Mechanic Arts, left a will which contained the following provision:

I give to my wife, Carrie, one-half of all my remaining property, both real and personal, absolutely, and do hereby give to her all of the income from the other one-half during her life time, and do constitute her a trustee for the said last half of my remaining property to keep and to hold the same during her life. At her death this last one-half of my remaining property shall then go to the Iowa State College of Agriculture and Mechanic Arts, to be used to found as

many scholarships of \$100 each as the income of the same shall provide.

The property thus bequeathed to the college was then of the value of \$40,000, but is said to be now worth \$70,000.

The lower courts of New York held that this part of the will was null and void for the reason that the college was a part of the state and could not receive a gift.

Mrs. Catt, who is a former Iowa woman, has, it is reported, found a way of carrying out her husband's will. She has filed a trust deed conveying the property to the college. This will obviate the necessity for an appeal of the case to the higher courts of New York by the attorney-general of Iowa.

The bequest was a noble one, generously conceived; and Mrs. Catt is to be commended for her course in making it effective.

## Listing or Checking Corn.

To the Editor of The Homestead:

Listing is certainly the most popular method of corn planting today in Missouri and Kansas; whether it is the best way or not, is very much of a question.

Some of its apparent advantages over top planting are that an earlier seeding can be made and this in the average of seasons is of value, for as a rule the early planted corn gives the best results.

With the lister a field can be seeded in much less time than it would take to plow, harrow and surface plant.

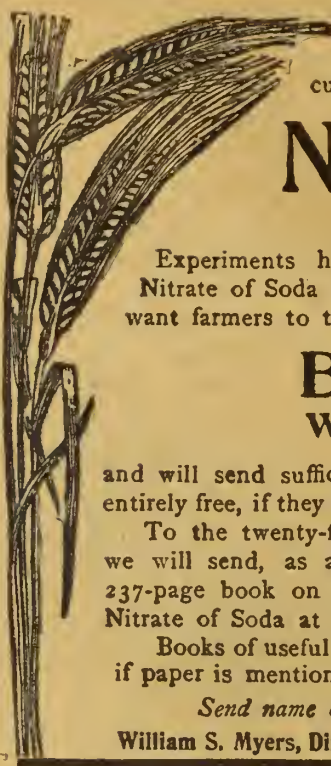

The hired man question also has a bearing, for horses can be had and with a riding lister and a relay of teams one man can cover a large area of land in a day.

Listed corn is thought to stand drouth better than surface planted due to the fact that the root system of the plants are established deeper in the soil, being thereby more closely connected with the sub-soil and in a dry time can avail of the supplies of moisture brought up by capillary force from subterranean sources.

As the rows are gradually filled as cultivation progresses, the fields are left in the end in a nearly level condition, a form better than ridges for the retention of moisture and affording stronger support to the plant against heavy winds. Wherever comparative tests of yields have been made between listing and top planting under like general conditions the results have been practically about alike. Indeed if the lister had not been able to maintain its equality it would have been in the junk pile long ago. While single listing and seeding at the same time without any previous preparation of the soil, probably largely prevails, yet there are many modifications of the work in common practice.

One of the changes instead of using the stalk cutter on fields that were in corn the previous year, is to give a good double disking, once each way; this effectively gets away with the stalks and whatever other rubbish may be present and also fines the surface soil to a good physical condition. Then list out the rows and plant with a double rowed corn planter.

Sometimes the listed rows are allowed to warm up a day or two before planting. One advantage of this method of planting is that the planter firms the soil well over the seed, insuring a more prompt and certain germination and there is another advantage; if a double rowed cultivator is to be used, two rows will always be parallel and equi-distant from each other, to which the cultivator

IT'S LIKE

cultivating only half your field to try to do without

# Nitrate of Soda

(The Standard Ammoniate)

Experiments have proved that a top dressing of Nitrate of Soda invariably means a greater crop. We want farmers to test it on

## BARLEY Wheat or Rye

and will send sufficient Nitrate of Soda for the purpose, entirely free, if they will use as we direct, and report results.

To the twenty-five farmers who get the best results, we will send, as a prize, Prof. Voorhees' most valuable 237-page book on fertilizers of all kinds. Apply for the Nitrate of Soda at once, as this offer is necessarily limited.

Books of useful information will be sent free to farmers, if paper is mentioned in which this advertisement is seen.

Send name and complete address on post card.

## AMERICAN FAMILY SUPPLY CO.,

1711 STATE ST.,

CHICAGO, ILL.

can be more easily and effectually adjusted.

Another practice is to double list before planting, thus securing a more perfect stirring of the soil. Some seasons this pays well to do, and again in some seasons there is no apparent advantage. It doubtless depends much upon the previous condition of the soil and the season. Others run the lister twice in the same row, not going any deeper the second trip than the first, claiming that this extra fining of the soil gives increased yields.

The great drawback of the use of the lister is the danger of heavy rains at the planting season. Every row for the time being becomes a canal, either carrying away the loose soil or else burying the seed or corn plants under an avalanche of mud.

This loss by the washing of a newly listed field is enormous and requires years of labor to renew. Of course these heavy downpours do not always come just at the time our fields are open, but they are in evidence often enough to cause serious and lasting loss. The amount of good Missouri and Kansas soil that the use of the lister has caused to go down to the Gulf of Mexico will never be estimated or known.

There is also in the use of the lister a greater liability of failure to secure a good stand, sometimes necessitating much replanting, and replanting is at best a job not to be courted. This is probably due many times to the soil not being sufficiently warm to start germination and the seed corn rots.

As a whole it is likely that the popularity of the lister is due to the fact that it is a less expensive method of corn growing than plowing and surface planting and that under our present methods and a majority of the seasons gives as good results. Now as to surface planting and check-rowing, where a field is prepared by plow and harrow there is certainly very much less danger of loss of soil by washing by a heavy rainfall at the planting period, as the loosened soil will absorb and hold a vast amount of water before reaching the point of saturation and flow and the seed or young plants if they are showing up are not as liable to be buried under mud. Germination is more certain and prompt and if good seed be used, a strong, even stand is almost certain. If checkrowed as most of surface planted corn is, a

## STEERS FOR SALE

286 HEAD well bred steers, the low down blocky kind, dehorned; weight 600 to 1,150 lbs. Must be sold at once. Call on or write H. I. BALL, FAIRFIELD, IOWA

more thorough and effective cultivation is possible, the weeds can be kept in better control, soil mulches more easily maintained, and we are realizing more and more each year that the corn crop depends more upon the cultivation it receives than upon the season.

Our own and the experience of the older states show the folly of continuously keeping our fields in any one crop and we are turning towards the practice of a rotation of crops. With the more general adoption of this system will come a less and less use of the lister and a larger use of the plow and disk.

We are really just learning how to grow corn, for now we only succeed in growing thirty or forty bushels to the acre when easily double that amount should be produced. This failure is not due to the limitations in capacity of the corn plant, the lack of fertility in our soils or the varying seasons. It is due to us, but we are learning. We are gathering some new ideas of practical application in soil fertility. We are learning many new and strange points about seed corn, about its selection, care and potency. We are coming to a better knowledge of the moisture requirements of the corn plant and that it is really within our power in a large degree to supply these requirements, whatever the seasons may be. And all this knowledge will crystallize and take shape in general acceptance and practice in the advancing years, and there shall be show-ers of blessings in greater harvests.

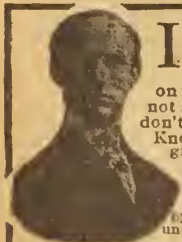

Kansas.

M. Mathewson.

Some farmers would be better off if they had to climb a slippery hill twenty miles long, going to town and had only one mile of smooth road going home.

## BARGAINS IN FARM LANDS.

If you want to learn about exceptionally rare bargains in South Dakota farm lands or unusual business opportunities in the new towns in the magnificent new country being opened up by the Minneapolis & St. Louis R. R. extension write for beautifully illustrated descriptive pamphlet on the "New Empire," the farmer's and stockman's paradise. This pamphlet will be mailed free. A postal card will do it. Write at once before edition is exhausted, to A. B. Cutts, G. P. & T. A. Minneapolis, Minn.

I can prove that the "Knodig" Pitless is the scale you need—if you will give me half a chance. That's all I ask of you. Send me your name and address, and simply say you will give the Knodig a 30-day free test. I'll do all the rest. I'll pay all the freight. I'll pay for setting the Knodig right on your premises if I don't prove my case. I'll take all the risk of the Knodig not suiting you. If it doesn't suit you that's my fault and my loss—not yours. I don't ask you to pay me a red cent until you're ready to say "Gumbel, your Knodig Pitless Scale is just what I needed." Do other scale manufacturers give you such a square deal or as mine? Not by a long shot. They don't dare to. I can afford to do it simply because the Knodig Pitless Scale will stand the test that other scales can't stand.

I send the Knodig Pitless Scale from my factory, straight to you, so I save you all dealer's, jobber's and agent's profits. It's the only scale that is good enough to be backed by an unlimited, iron-clad 10-year guarantee. You positively can't afford to buy a scale until you read the big Knodig Book—It's free. Just send me a postal. Read it and then—

Let Me Pay the Freight On a **Knodig Pitless Scale** 30 Days' Free Trial

Remember the "Knodig" Pitless is fully covered by patents so you can't buy the best scale made except by sending direct to me. You can move your "Knodig" Pitless Scale wherever you need it. No pit to dig and keep cleaned out—no rusting parts—no rotting timbers—no big repair bills—no trouble at any time, but an ever-ready, absolutely accurate scale because tested and regulated in exact accordance with U. S. standard of weights. My free book is the most complete and attractive scale book ever published. It contains over 40 handsome illustrations of interest to every Farmer and Stock Raiser in the land. It shows you just how you can save from \$35 to \$50, and at the same time get the best scale made. Send for a copy now. Address me personally like this:—  
H. C. GUMBEL, Gen'l Mgr.,  
National Pitless Scale Co.,  
2011 Wyandotte St., Kansas City, Mo.

## VETERINARY MATTERS

PROFESSIONAL veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their addresses. No question will be answered by mail unless accompanied by a fee of \$1.00. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

### SYMPTOMS AND TREATMENT.

#### LOSS OF COWS.

I would like to know what kills my cows, as I have lost two of them inside of a week. They seem all right at night and are dead in the morning. They run in the stalks and meadow, and I feed them corn and clover hay, in the barn at night. One died and I tied another in her stall, and that one died. I had a veterinary doctor from Red Oak and he said they were poisoned, from eating clover hay. Kindly let me hear from you soon.

We are at a loss to know what killed your cows, as your description throws little if any light on the subject. It seems unlikely, however, that clover hay should cause death unless it happens to be moldy. We suspect that cows have picked up injurious food on stalks and would advise you to stop pasturing in those fields. Corn stalk disease, so-called, takes many forms and this may be one of them. If more trouble occurs notify the veterinarian of the state experiment station at Ames and ask him to investigate or have it done by the state veterinarian.

#### CORN STALK DISEASE.

I have a cow which had the corn stalk disease that many cattle have recently. She took sick while I was in to dinner, and when I came out the hogs had bitten the point of the left front teat off, and had torn the flesh from the right front teat. She got well all right of the disease, but the bag is in bad shape. It was impossible to milk those two front teats for several days. I applied salve until the wounds were partially healed, and by this time her bag had begun to cake. I milked the teats, and clots came from them. It then turned to clean water, and the bag kept getting harder. I then applied salt grease, but it did no good. It grew to smell terrible. We then called a veterinarian who advised us to bathe in very hot water twice a day and insert a liquid of warm water and a white powder. Have continued this some two weeks. It does no good. Cow is very poor. She was a good milker and very hard to turn dry. Was fresh in August. Is six or seven years old. Has been sick since middle of December. Has good appetite. What shall I do for her?

The cow is ruined, but might possibly have been saved had you at once called in the graduate veterinarian to give intelligent treatment. The two affected quarters are lost and will not regain their function, so if possible she should be dried off and fattened. If you do not care to do this then sell her to the buyer of "canner" cows. Treatment at present stage should consist in injecting a

lukewarm one per cent solution of permanganate of potash into discharging teats once daily until bad odor subsides; then change to two injections of hydrogen peroxid daily and from the first rub the affected parts of udder once daily with mercurial ointment.

#### SKIN DISEASE.

I have an old mare that has something the matter with her tail. I would call it lth; it is also on her back bone. She eats hearty. What shall I do for her?

You are feeding too heavily of too many different feeds. Substitute whole oats and bran and if possible supply some carrots in addition to hay. Have teeth of old mare put in order by a veterinary dentist. Scrub affected parts of skin with soap and hot water; then with a 1-30 solution of coal tar dip, in which flowers of sulphur have been freely mixed. Apply the latter every three days, but do not wash again. All of the horses should be out of doors for exercise just as much as possible if not worked.

#### LUMP JAW.

I have a registered bull which has the lump jaw. Would be pleased to know if it is contagious.

Lump jaw is not, strictly speaking, to be considered contagious, but is an invasive disease, being caused by the ray fungus finding entrance to the tissues by way of a scratch or abrasure of the skin or wound of the gums. Where pus is discharged from a lumpy jaw abscess it contains spores of the ray fungus (actinomyces) and these getting onto fodder might affect an animal having scratches or other wounds of the face or gums. It, therefore, is a wise plan to isolate an animal so affected. The disease is not transmissible to progeny by an affected bull or cow.

#### ABORTION.

I have been a subscriber for your paper since December, and have failed to see anything in regard to abortion, and as I have twenty-five head of two-year-old black Angus heifers would like to know something of it. Five of these heifers have aborted, due to calve from the 1st of May to June 15th. They are in good order and have the run of the farm, corn stalks, meadow, oats straw, a little hay night and morning, but no grain. They have plenty of water and salt once a week. Now I wish to know what to do for them. Will it be safe to breed those that have aborted? Should I use a disinfectant? What? How? Please answer through your paper.

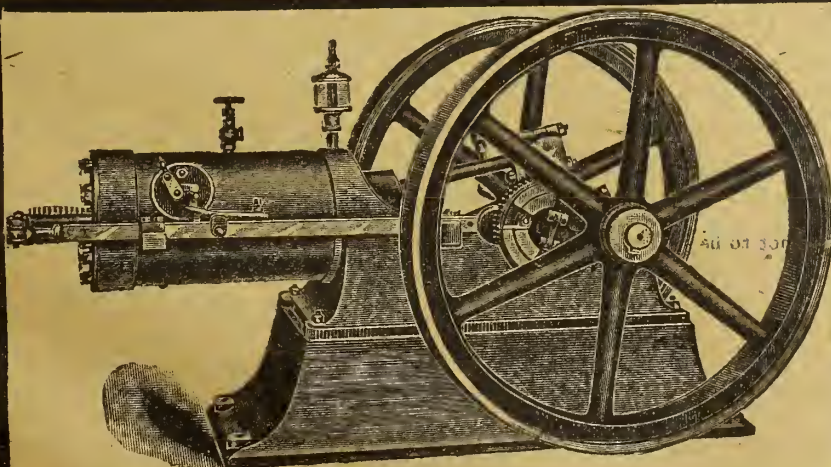

We have very many times given full and explicit instructions as to treatment of contagious abortion. Isolate the aborted heifers and do not breed them until they arrive at the time they would have been bred had they not aborted and not then unless the discharge has wholly ceased as a result of treatment. The feeding mentioned is unfit for pregnant cows. They should have grain, mixed hay and be kept out of stalk fields. Flush out the vagina of aborted cow once daily with a lukewarm 2 per cent solution of coal tar disinfectant for a week; then every other day for a week; then twice a week until bred. Every day spray or sponge external genitals of each pregnant cow with similar solution. Give each pregnant cow throughout pregnancy half a dram of pure carbolic acid mixed in water and put in feed,

## HORSE OWNERS! USE GOMBAULT'S CAUSTIC BALSAM.

A safe, speedy and positive cure. The safest, Best BLISTER ever used. Removes all bunches from horses. Impossible to produce scar or blemish. Send for circulars. Special advice free.

THE LAWRENCE-WILLIAMS CO., Cleveland, Ohio.

### BLACKLEG IN CATTLE

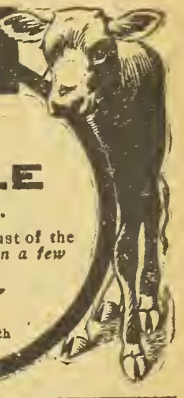

NO DOSE TO MEASURE. NO LIQUID TO SPILL. NO STRING TO ROT.

Just a little pill to be placed under the skin of the animal by a single thrust of the instrument. You cannot afford to let your cattle die of blackleg when a few dollars spent on Blacklegoids will save them. Write for circular.

**PARKE, DAVIS & COMPANY**

HOME OFFICES AND LABORATORIES, DETROIT, MICH.

NOTICE.—For a limited time we will give to any stockman an injector free with his first purchase of 100 vaccinations.

sprayed on hay, or given as a drench each other day. Carbolic acid may also be mixed in salt at rate of one pound of the acid to fifty pounds of salt and given freely to cattle on grass as a preventive.

#### LAMPERS.

I have a black horse six years old, weight 1,000 pounds, that has lampers. I think it is called. The gums on the inside of the upper teeth are swelled down lower than the teeth. Please tell me how to cure him. I have been feeding timothy hay and shelled corn. Has been sick about a week.

Lampers is not a disease in itself, but merely a symptom of general inflammation of the gums and buccal membrane lining the mouth. The probable cause is irregularities of the teeth which should be attended to by a veterinary dentist, after which swab mouth twice daily with a solution of half an ounce of borax in a quart of soft water and allow horse to chew on a few ears of old hard corn daily.

#### AN OIL WITHOUT ODOR.

We know that it will interest our readers to learn that the J. Stevens Arms & Tool Co., of Chicopee Falls, Mass., have perfected a new oil which is known as "Stevens Odorless Gun Oil." The name is interesting when we know the unwholesome odor that gun oils have had in the past. This oil is a lubricant, rust preventive, polishing and a cleaning compound. It is not only adaptable to firearms, but also to bicycles, sewing machines and all mechanisms requiring a high-grade oil.

GOMBAULT'S CAUSTIC BALSAM IS O. K. Frank M. Dyer, of Early, Iowa, writes March 26, 1906: "The Lawrence-Williams Company, Cleveland, Ohio:—A mare of mine had a sore spavin 11st spring. I used all kinds of remedies, but nothing helped her until one day a friend told me to try Gombault's Caustic Balsam. I did so and now the mare is all right. I will do all I can to help you. Your remedy is the best that I have ever used." See advertisement on this page.

#### EXCURSION RATE TO PACIFIC COAST.

Daily during March and April, the Minneapolis & St. Louis R. R. will sell one-way excursion tickets to points in Montana, Idaho, Washington, Oregon and British Columbia at \$15 less than regular rate. Ticket offices 512 Walnut St., and Union Station. For further information address W. K. Adams, D. P. A., 512 Walnut St., Des Moines, Iowa.

#### CHEAP ONE-WAY RATES.

Every Tuesday during March and April, the Minneapolis & St. Louis R. R. will sell cheap one-way excursion tickets to points in Minnesota, North and South Dakota and the Canadian Northwest. Rate is \$14 to most North Dakota points. Buy tickets at 512 Walnut St., or Union Station. For further information write W. K. Adams, Dist. Pass. Agent, Des Moines, Iowa.

## Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

### Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Write for detailed information and a free copy of Fleming's Vest-Pocket Veterinary Adviser

Ninety-six pages, durably bound, indexed and illustrated. Covers over one hundred veterinary subjects. Read this book before you treat any kind of lameness in horses.

### HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

Three cornered patches of land are frequently made by railroads crossing farms and fields of this shape are rather unhandy to plow or work with any field implement. One of our subscribers tells his plan of procedure when such a plot is to be plowed with a stirring plow. He plows around the field, but in place of plowing out to the point of the triangle where the freshly plowed land must be tramped considerably if the point is finished; he throws the plow out of the ground far enough from the point to allow the turn to be made on the unplowed land. This leaves a strip eight or ten feet wide the full length of the field when the stubble is all turned. Now the strip can be plowed and all the turning must be done at the extreme ends of the strip.

"In stretching woven wire fence I find a splendid stretcher in the enclosed sketch," writes J. W. B., Hurdland, Mo. "Five or six feet from the end of the corner or end post I set a temporary post as an anchor for the stretcher. A brace is placed between the tops of these two posts as shown which completes the anchor. A clamp made of hard wood 2x4's is bolted on the end of the woven fence and the stretcher proper, the end construction of which is

shown in detail, is hooked in position. The chain from the anchor is hooked into the lone hook on one side of the stretcher and the chain from the fence clamp hooks into one of the two on the opposite side. The lever for the stretcher is about ten feet long and of sound timber, as one cannot afford to risk a break at this point. The lever is worked back and forth and the pair of hooks are alternately fastened in the chain from the clamp until the fence is taut." A blacksmith can make the necessary parts

of this stretcher and the bolts for the clamp can be purchased and that part made at home. It is much handier to have a stretcher of your own than to have to depend on borrowing and then never know when one may be secured, as other people usually want to stretch fence just when you do.

On all sides buyers of swine for breeding purposes are crying for more bone, larger frames and more growthy individuals. The demand is significant. It means that the majority of farmers and breeders have not yet learned the secret of feeding their herds the proper kind and amount of feeds that tend to produce large, growthy frames in the hogs.

ALL STYLES—LOWEST PRICES—  
AMERICAN SCALE CO.  
206 NEW ENGLAND BLDG., KANSAS CITY, MO.

It is a well-known fact that the cheapest feeds in the corn belt are those suited to the growing needs of the animal. Corn will never produce bone when fed in itself, for the simple reason that it does not contain a very large per cent of mineral matter. Some of the other grains are much better fitted in this respect for bone-making and a great many farmers are feeding liberally of oats, wheat, rye and barley. Here and there we find some man who is a firm believer in keeping a good supply of coal, ashes, slack, charcoal, and any other kind of material which contains a large portion of mineral matter on hand. It invariably follows that where this kind of food has been kept before a herd for a good many years they are, as a whole, strong-limbed and large of bone. One breeder whom we know of practices the feeding of a mixture of salt and slack. He is situated near a coal mine where he can procure the slack easily. He feeds the mixture from a feeder, a sketch of which we show. The box part of the feeder is of sufficient size to hold several bushels of the mixture. There is a false bottom to the box which slopes from the front to the rear and allows the salt and slack to feed down through a space two inches wide between the box and the rear end of the false bottom. The salt and slack work out on the bottom proper where the hogs gain access to it. One would be surprised to know how regularly each one of the herd comes to the box. On several occasions the box has gone empty for a day or two. On refilling every member of the bunch was as anxious to get at the mixture as could be imagined. Some swine growers on account of their location in a country where lime-

stone occurs in abundance may not need to supply mineral matter to the extent that is necessary on soils of a different nature. Cob and bone charcoal are standard forms of mineral feed in many of the best herds in the country. They should not be burned too hard, but rather charred, or the result will be ashes rather than charcoal.

From one of our Illinois subscribers comes an idea in the form of an electric light for writing desks and secretaries. An ordinary electric light globe of six-candle power is hung over the desk and it is connected with a seven-jar dry battery which is located in some part of the desk. The whole outfit complete costs \$1.75 and it furnishes a very nice light and it is always ready for use. The writer did not state how often the jars needed to be renewed. However, it is likely that if the light is not used too much of the time it would not be very expensive. A desk with such a complement, along with a desk phone, should certainly make the work of writing letters and answering inquiries a delight to any farmer.

#### Destroying Hog Lice.

To the Editor of The Homestead:

I would like to give my experience in dipping hogs for lice. I do not agree with your correspondent who thinks dipping will not kill lice.

Last spring my hogs did not seem to be doing well, so I proceeded to look for the cause, and discovered that they were covered with lice. The next thing was to get rid of them. I priced the dipping tanks and found the price so high that I hardly thought it would pay me to buy a tank for such a small herd of hogs. I therefore dug a hole in the ground large enough to immerse a large hog, and plastered with cement, just as you would a cistern, plastering right on the ground. One sack of cement will make a vat large enough to dip a 300-pound hog. After it sets two hours, whitewash with pure cement and it will not leak a drop. Use one part of cement and three of sand.

Two dippings ten days apart freed my hogs from lice. The balance of the summer we dipped once a month and my shoats have done extra well. Dip in cold weather if hogs have lice.

Just before breeding time I bought a thoroughbred boar at a good long price. When I got him home I found that he was covered with lice. I warmed the water enough to take the chill off, then run him through the vat twice and he was rid of every louse. Of course you must keep the animals out of the wind until they are dry. If

### THIS SCALE IS PERSONALLY GUARANTEED BY ME.

### Here's My Hand on It

After more than forty years experience as a scale-builder I am now able to offer you a five ton bridge trussed steel lever scale with platform 14 feet x 8 feet and a solid brass compound beam and beam box for \$45.00 delivered to your station. All sizes from a postal to a track scale at an equally low price. All scales sold on trial.

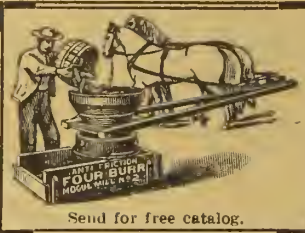

Write me for full particulars of this offer.

JONES HE PAYS THE FREIGHT

JONES OF BINGHAMTON,

Box 418

Binghamton, N. Y.

### THE OLD RELIABLE Anti-Friction Four Burr Mills.

DOUBLE THE CAPACITY OF OTHER MILLS. TWO-HORSE mill has 25 ft. Grinding burrs all grinding at once and grinds from 25 to 50 bu. per hour. Four-horse mill has 30 ft. of grinding burrs and grinds from 60 to 80 bu. per hour.

30,000 Bu. With One Set of Burrs. I have used a Mogul No. 1 mill for seven years and it has ground with one set of burrs more than 30,000 bu. of corn and the burrs are still in good condition. F. F. Craig, Mt. Carroll, Ill.

Absolutely no friction or gearing. Will earn cost price in three days. The largest ears of corn to these mills are like pop corn to other mills. We manufacture the most durable and fastest grinding line of mills sold, including our Famous Iowa No. 2 for \$12.50. Bovee Grinder & Furnace Works, Waterloo, Ia.

## LUMBER <sup>1/2</sup> Price

ing goods of all kinds roofing, etc. Reference, Merchants - Laclede National Bank. Satisfaction guaranteed or your money refunded. Write to-day for complete catalogue and prices.

ST. LOUIS WRECKING & SUPPLY CO., 3867 MANCHESTER AVE., ST. LOUIS.

you do this there will be no danger of their catching cold. I think there is no necessity for dipping in cold weather if hogs are free from lice in the fall. Change their bedding once a week and disinfect their sleeping quarters and lice will not be very plentiful by spring. I do not think dip hurts the hearing, or the eyes. I do think it is the best thing for little pigs that have cankered mouth. It will not hurt a week old pig to dip him.

M. C. Freestone.

Lice on hogs, in order to perpetuate their posterity, deposit their eggs or nits on the hairs of the animal. It is an easy matter to destroy the lice, but unless the vitality of the nits is destroyed in due time they will hatch out another lot of lice.

A solution of crude carbolic acid and machine oil, in the proportion of one part acid to seven parts oil, will, if applied to all parts of the animal's body, effectually exterminate both lice and nits at the same time. We have bred and fed hogs on our farm for thirty years. During that time have had only one lot of lousy hogs. We selected our breeding sows out of the herd and put them by themselves and fattened the remaining ones for the market. Upon inquiry I found that the remedy above referred to had been successfully used by other parties on their hogs. We used it on our breeding stock and it did the work thoroughly, and since that time we have never had lice on the farm unless it was brought there by some other animal.

We scrutinize every hog we purchase to see if there are any lice, and if there are, we just make an application. It is not necessary to soak the hog in the solution, but just apply enough to wet all parts of the animal from the end of his nose to the tip of his tail. Be sure to apply it to the inside of the ear as well as the outside. We applied it with brushes and rags, rubbing it in thoroughly. In the winter time it would be well to keep the mixture a little warm when applying it. Acid will not freeze, but the oil will if not warmed.

Crude carbolic acid is a great disinfectant around buildings where live stock is kept. In mixing large quantities for a disinfectant we dilute the acid with water, it being cheaper than oil. In a short time it will be ready to use by stirring it up. Carbolic acid is not dear in price. It can be obtained in most any quantity at the drug store. If any of your subscribers who have lousy hogs doubt the efficiency of the remedy given above they can procure a small amount and test it. While it is itself a poison, but not to the extent that it requires a label from the druggist, yet it is better not to administer it internally.

Should some of the mixture get on the hands a little soap and washing powder will remove it. I have used it for years and have never had any trouble as a result of its use. C. H. Fairall.

Cedar county, Iowa.

Those who oppose cooling the eggs in the incubator, have never explained the effect upon the eggs under the hen, which are at times exposed for an hour while she is off the nest eating, drinking and dusting herself.

Dressing poultry is an art. If neatly dressed, poultry sells quickly.

### 15 YEARS OF ECZEMA

Terrible Itching Prevented Sleep--Tore Bandages Away to Scratch--Got No Permanent Relief Until

### CUTICURA CURED IN 6 DAYS

"I had eczema nearly fifteen years. The affected parts were my hands, arms, and legs. They were always itchy, and I could not keep from scratching them. I had to keep both hands bandaged all the time, and at times I would have to tear everything off my hands to scratch the skin. I could not rest or sleep. I had several physicians treat me, but they could not give me a permanent cure, nor even could they stop the itching. After using the Cuticura Soap, one box Cuticura Ointment, and two bottles Cuticura Resolvent for about six days the itching had ceased, and now the sores have disappeared, and I never felt better in my life than I do now. Edward Worell, Band 30th U. S. Infantry, Fort Crook, Nebraska."

#### A Cyclopedia of Agriculture,

There has recently come from the press of the MacMillan Company the first volume of Bailey's "Cyclopedia of American Agriculture." It is a work of between 600 and 700 pages and is a compendium of the principal current facts and opinions relating to farm affairs. Prof. L. H. Bailey, editor-in-chief, has been a liberal contributor to this volume, though he has been assisted by several hundred recognized experts.

This volume is the first of a series that will be prepared by Professor Bailey, and it deals with the agronomy division of agriculture, it being the intention to discuss live stock questions in future volumes.

Nearly every page of this cyclopedia is illustrated, there being something like 100 full page half-tone prints. It is printed on good paper, the type is attractive, and we have no hesitation in saying that the book would make a splendid addition to any farm library in the great central West.

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must in variably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 950,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## PLYMOUTH ROCKS.

MAKE YOUR FORTUNE NOW raising Barred Plymouth Rocks of the prolific strain. Females, \$2.50, males \$5.00, worth double, sent C. O. D. without a deposit; no risk of refusal when you see them. Eggs, this season only, best pens, 13 for \$1.25; 28 for \$2.00. Farms in eight states; low express charges everywhere. Catalog free. Geo. Phillips, 7631 Coles Ave., Chicago, Ill.

A BARGAIN If taken at once. 320 acres in eastern part of Dickey Co., North Dakota. For particulars address Box 105, Oakes, N. Dak.

OKLAHOMA FARMS—Write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

## REAL ESTATE.

WHY DO YOU GO to the extreme Northwest when you can buy the best kind of land in central Wisconsin much cheaper and be living in God's country under the Stars and Stripes, and be near the best markets, such as Chicago, Milwaukee, Minneapolis, St. Paul and Duluth? The land is the most fertile, water the purest and best, and the grazing grasses grown are unequaled in any part of the country. Think for yourself. This is the best opportunity in the United States today; the climate is delightful and conditions such that any man who will work will make big money. Write for lists of improved and unimproved farms stating what you desire. J. W. Gray, New Auburn, Wis.

STOCK RANCH FOR SALE—7,000 acres near Eureka, Nevada, patented; plenty of water, perpetual flow; controlling 20,000 acres contiguous pasturage; ranch now stocked with 1,000 head of cattle, many horses, etc. Property fenced and contains modern improvements, houses, barns, etc. Cutting 600 tons of hay. Broken health only came for sale. Price, \$50,000. For terms and particulars address the owner, Mrs. M. Wenzel, Eureka, Nevada.

480 ACRES—Thirty miles from Kansas City, Mo., in Johnson and Miami counties, Kansas. Best land, all smooth; stock and grain farm; all alfalfa land, sixty acres seeded, line improvements, \$85 per acre. 145 acres, well improved, adjoining town, \$85 per acre. 80 acres, fair improvements, one mile from town, \$45. For terms and description, address, W. E. Tisdale, Springhill, Kansas.

ARE YOU looking for a home? If so, don't buy before seeing copy of the Real Estate Journal. It has nearly 4,000 farms, city property and stocks of goods advertised in it, and reaches 45,000 readers each issue. Advertising rates 2 cents per word. Send 10c. In silver for two months' trial subscription. Farm and Real Estate Journal, Traer, Iowa.

BARGAIN HOME FARM—160 acres, good house, stable, grove and well; 135 acres wheat, second crop from '06; balance pasture. Farm all level and fenced, only two miles from county seat of Harper County, southern Kansas. Best wheat, corn and alfalfa in Kansas. Price, \$4,500, one third, low interest. Write Theo B. Marsh, Anthony, Kansas.

FOR SALE—480 acres prairie land, under fence, in Graham County, Kansas, three and one-half miles from good town, 155 acres plow land, balance rough, with excellent spring of running water; school house on land. Price, \$12.00 per acre, \$5.00 per acre cash, balance easy terms. Wm. Rush, Morland, Kansas.

FARM FOR SALE—To close an estate, 120 acres must be sold soon, located in Ford County, Illinois, center of corn belt; house, barn and cribs, deep well and wind mill. Price, \$120 per acre. No trades. Write today. W. J. Stone, Gibson City, Ill.

OKLAHOMA 25 CENTS—Oklahoma colored new state map and book describing soil, crops, rainfall, climate, church, school and social conditions, with free information mailed on receipt of 25 cents. James M. Powers, Lawton, Oklahoma.

\$720 BUYS 72 acres good land, 45 fenced and in cultivation. Water, fruit, house four rooms, outbuildings; everything in good repair; station, 1 1/2 miles, rural free delivery and telephone. Terms, Frank Pearce, Fredericktown, Mo.

SOUTHERN LANDS—Why not? Come to the Sunny South, fine climate, cheap lands, four crops yearly. Write for free booklet. Southern Land & Improvement Co., New Bern, North Carolina.

CHEAP LAND IN IOWA on easy terms. Half section half mile from Titonka, Iowa. Partly tiled, good level land; will split in small tracts. Investgate. Write, Herman Nelson, Titonka, Iowa.

A GOOD 80, 160, 240 and 320 acre farm for sale. Near Catholic church and schools. Fine improvements, best soil, easy terms, prices right; correspondence solicited. Julius Kunz, Wesley, Iowa.

IDEAL RANCH—1,600 acres, four miles from county seat; five-room house, horse barn, cattle sheds, granaries; fine artesian well. For particulars address, Chas. Turner, Leola, S. Dak.

PANHANDLE LANDS—The cheapest and best farm lands to be found anywhere. Will grow anything. Write us for particulars. Christopher Brothers, Miami, Texas.

HARPER COUNTY FARMS in the Wheat Belt of Kansas. Correspondence solicited. Robert Law, Real Estate farm loans, Anthony, Kansas.

FARM BARGAINS—180 acres, rented \$725 cash, \$87, 240 acres, Jouis Sioux City, 37. S. Sanders, N. W. Bank Bldg., Sioux City, Iowa.

IOWA 80 farms as good as Illinois \$125 kind. Send for booklet of prices. "Secor," Postmaster, Buffalo Center, Iowa.

A GOOD FARM FOR SALE—180 or 500 acres, three-quarters of a mile from depot. G. H. Watson, Barry, Illinois.

INFORMATION—All about sunny southeastern Oklahoma for stamp. J. L. Merritt, Tecumseh, Oklahoma.

WANTED—A Dakota land bargain. Box 400, Buffalo Center, Iowa.

## MISCELLANEOUS.

TYPEWRITERS—All makes, all prices. Large stock of 22 makes to select from; prices 1/4 to 1/2 manufacturer's prices. Slightly used and factory rebuilt machines our specialty; full guarantee. We ship on approval anywhere. Write for bargain list. B. P. Swanson Co., 222 Fifth Street, Des Moines, Iowa.

RAT PROOF Corn Crib Fixtures. Just patented. Only thing in America that "turns the rats out" and keeps them out. County rights for sale to farmers. Good farmer salesmen wanted. Full particulars free. Wm. Branch, Abingdon, Ill.

AYERS' CATARRH JELLY cures catarrh and deafness. Write today for 25c tube on approval. If benefited send the money. Ayres Chemical Co., Sidney, Ohio.

CREAM CREAM! Send us your next shipment that we may convince you that profits will be increased by shipping direct. Des Moines Creamery Co., Des Moines, Iowa.

PRINTING—Send 10 cents for samples of our work and catalog. We print anything from a card to a catalog. Journal Publishing Co., Annville, Pa.

COINS ARE VALUABLE—Look at dates. 1853 quarter worth \$4.00. Send for Coin Value Book P, ten cents. Geo. W. Elson, Springfield, N. Y.

COAL, \$2.00—Like anthracite, coke, gas, litter produced from peat swamps. J. Bordolillo, Kinseybridge N. Y. City.

## OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

## CROPS FOR NEXT WINTER'S FODDER.

The following communication has been received from a subscriber at Wayland, Iowa:

I keep fifty cows and my greatest difficulty is in getting enough good fodder for winter use. What would you advise me to sow this spring so as to have a good supply next winter? I have tried millet, but do not like it very well.

Where as many as fifty cows are kept it is doubtful if any venture would pay as well as the erection of a good silo and the filling of the same with good fodder corn. With this number of cows one might reasonably expect the silo to pay for itself the first year.

However, if this plan is not adopted good use might be made of some cane or sorghum fodder. This is usually seeded sometime in May or June and the seed bed should be well prepared. Use anywhere from seventy to 120 pounds of seed per acre. Of course seed has been somewhat high in price during the last few years and the tendency has been to economize a little, but on general principles the thicker the better as the cane then grows much finer in the stem and therefore makes a better fodder. Cane is usually cut with the mower and put into large shocks, afterwards being hauled to the feed yard when it is needed.

Some use might be made of a mixture composed of peas and oats—that is, Canadian peas. This mixture is generally seeded at the rate of three bushels per acre, using equal parts of each. The pea crop is a legume and if the mixture is cut when the grain is in the milk stage it furnishes a most nutritious and palatable fodder. It is true that the crop is not grown much in the corn belt, but those who have used it most extensively are enthusiastic over its value.

## Raising a Dairy Calf.

To the Editor of The Homestead:

The success in growing the calf, whether raised by hand or nursed by the dam, depends very much on the care it receives during the winter and spring. It must be well cared for during the first

winter, or no matter how well bred or how well it may be fed as a yearling or finished for market it will not reach its full possibilities. It is the mistakes of the first winter that are serious in handling any kind of young stock. I believe that grain can never be fed to better advantage and with greater profit than to the young stock on the farm from weaning time until grass becomes good the following spring. Not that they should be given all the grain they can eat right through, but that a reasonable amount is very beneficial while they are getting a start. When the calf is running with the cow I would commence feeding grain just before weaning, and with the hand-raised calf it has already commenced and should not be discontinued until it is a year old and on good substantial pasture.

If a calf is fed a little more than half of what it will eat up clean of oats and corn and given good clover hay, plenty of salt and pure water and sheltered from the cold, stormy weather, the animal will pay for it all and leave a good profit to the owner. The calf needs some muscle-forming food, and oats and bran are probably the cheapest foods for this purpose. However, some corn is required in severe cold weather to keep up heat. While the calf is simply being grown, not fattened, care should be taken in feeding. Feed in quantities that will come just a little short of satisfying their appetite. A common mistake made, even by some of our most expert dairymen, is feeding the young calf too lavishly during its early life. As a rule the up-to-date dairyman is a very ambitious individual, proud to raise anything in the line of fine stock, but sometimes his ambitions overcome his judgment and in mistaken kindness to the animal he feeds too heavily of rich and not easily digested foods. He may be conscious of the fact, yet he is ready to take the risk for the sake of out-classing his neighbor in raising something extra good. The result is that the animal becomes stunted and is almost worthless. Feed such as the steers or other fattening stock get is not such as the dairy calf should have. It is fattening food and the result is that the calf becomes excessively fat without sufficient muscular or bony development. If a farmer treats all his calves alike, steers and heifers, and gives them practically full feed, it is useless for him to expect profitable dairy cows out of them. In fact, it is my opinion that improper feeding has more to do with degeneracy of milking stock than any other one thing.

Waukesha Co., Wis. W. Stenson.

## Corn for the Silo.

To the Editor of The Homestead:

I have tried several kinds of corn in my silo; but have as yet failed to find a more satisfactory variety than Leaming. While sweet corn and ordinary field corn grown here can be used, I do not believe they will give as good results as some of the dent varieties, which will produce considerably more feed of both fodder and grain per acre. Get a good variety of corn—I mean one that has given good results in the locality in which you wish to grow it, one that will not only yield stalk and grain, but will fully mature before frost time.

The matter of maturity is very important, for no corn will give the best results in the silo when placed there before it has reached that stage. Green corn or that which is immature will invariably make unsatisfactory silage, and right here has been the mistake of many farmers in their first experience with the silo. They have used corn for filling before it had fairly matured and the kernels had not become glazed and well dented, consequently their silage has come out sour, as they term it. Do not

## THE OLD PAN WAY

50%

MORE CREAM

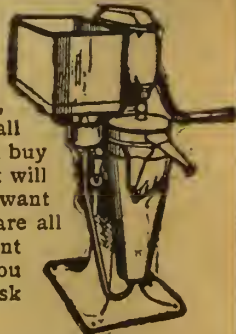

THE TUBULAR WAY

The old pan way of raising cream don't pay—it's too mussy and fussy—too much work for the women. And it don't pay in dollars and cents because you actually lose 50 per cent of the cream you ought to get. You can increase your cream product about 50 per cent over pan setting; 33 per cent over cans set in cold water; 25 per cent over patent creamers or dilution cans by using the

DON'T PAY

## SHARPLES TUBULAR SEPARATOR

Besides you can skim the milk immediately after milking—save the handling and the expense of storage. A good milk-house costs more than a Tubular and isn't half so profitable—even if you already have the milk-house it will pay in labor saved, in crocks and pans saved, and the increase in cream will be all clear profit. Of course, when you buy a separator, you want the one that will get you the most profit—you'll want the Tubular—the reasons why are all given in a book which you will want and which we want to send to you free if you will only write for it, ask for book H. 121

Mr. Mac Tuttle, Danville, Ill., says "The first week we used the Tubular we made a gain of 12 lbs. of butter from five cows."

THE SHARPLES SEPARATOR CO.,  
Toronto, Can. WEST CHESTER, PA. Chicago, Ill.

cut until the kernels have dented and it is about ready for the shock.

For removing the silage from the silo I have found a common four-tined manure fork a most convenient tool. The larger the fork and the closer together the tines the faster the work may be accomplished. It is important however, that the surface of the silage be left as nearly level as possible and the amount removed from time to time simply skimmed off the top to a depth of two or three inches each day. It is never best to thrust the fork down into the silage five or six inches, as though it were manure you were pitching. Simply take the top layer in as careful a manner as possible, not loosening up more than is taken out. In this way there will be considerably less waste either by molding or freezing.

In handling silage after it comes from the silo we like best a short-handled potato or beet fork. Such a fork has a number of tines set close together with the outside ones slightly raised in order to hold more and is a very convenient tool for feeding silage. The ends of the tines are not sharp, but have a slight enlargement making its use more like a shovel than a fork. Such a fork is light to handle and will hold not far from the right amount of silage for a single feed, but if more or less is desired it is as easily supplied. The first year we had our silo we used a bushel basket to handle the silage, but since trying the beet fork we have never returned to the old method. My silo chute is so arranged that the silage falls near the center of the feed way and the cow mangers all face inward. The feeding is thus very easily and quickly done, taking but a few minutes to feed the entire herd.

Cows should never be fed exclusively

on silage. They need some dry forage to go with it; besides, silage is a carbonaceous food and needs some more nitrogenous food to go with it to make a well balanced ration. About thirty, or at most forty pounds of silage a day is as much as should be fed to each cow. If the feeding commences immediately after filling the silo, and this is a good way to do, there will be no damaged silage at all. My way to feed the silage ration is in two feeds, night and morning, and it is better to feed after milking because the peculiar odor of the silage might affect the flavor of the milk. Cows, as well as other stock, have a wonderful liking for silage, and I believe much of the success in feeding it can be attributed to its palatability. They even prefer it, to a certain extent at least, to fresh-cut forage or good grass in the pasture. I have seen cows in June when on good pasture come to the gate at four o'clock in the afternoon and bellow to come to the barn and get silage, which they would eat greedily and with apparently great relish. There is no better and cheaper feed to supplement short pastures which we are almost sure to have every summer on account of drouth or other causes than good silage.

I know some of the most successful dairymen in the country who feed silage every day in the year, winter as well as summer. I believe the time is not far distant when a large portion of the feed consumed upon the average farm will be silage. When our people once realize its value, silos will be put up as fast as their means will admit. In each community some one will have to lead in demonstrating its value in the dairy barn, the sheep pen and the feed lot. Good dairymen have found that silos which will hold two hundred tons of silage can be built for \$300, and that with the grain, dry feed and pasture this will carry twenty cows through the year, giving thirty to forty pounds per day of silage. Alfalfa hay or clover should be a part of the ration to supply the protein. Silage and bran fed in the morning, following by a feed of clover or alfalfa hay with another feed of silage and bran in the evening, and with a feed of clover hay the last thing at night, is the feeding plan of many a successful dairyman.

Some of the most successful dairy farmers have adopted the plan of having their cows freshen in the fall from September to November. The advantage of this plan is that the best flow of milk is then secured during the winter when prices of butter and cream are higher than at any other time. Then again,

## Mica Axle Grease

lengthens the life of the wagon—saves horsepower, time and temper. Best lubricant in the world—contains powdered mica which forms a smooth, hard coating on axle, and reduces friction.

If you want your outfit to last and earn money while it lasts—grease the axles with Mica Axle Grease.

DAVIS CREAM SEPARATOR CO.,  
841 N. Clinton St., Chicago, U. S. A.

## Don't Buy Until You Investigate!

We Ask Only the Chance to PROVE Our Claims.

YOU want the cream separator that will give you the best results, in profits and comfort.

It's mighty poor policy to buy until you are sure you are right. That's why we urge you to make a thorough investigation of the Omega—to find out for yourself whether or not it is the separator you want.

We offer to prove to you that it is the best separator—that it does better work and gives less trouble than any other. Surely it is worth your while to find out about it.

We Want To Show You Why

—The Omega turns so easily:

—How it is the only separator with the bowl supported at both top and bottom;  
—How it delivers both milk and cream from the bottom of the bowl.  
—How the bowl drains itself;

## Just Try Omega An

—How you can stop the bowl instantly;  
—Why you can clean it and have it ready for work again in three minutes.  
—Why it lasts so long.  
—Why it needs so few repairs.

We ask you to take these statements as facts—which we want to prove to you. We believe a fair investigation will easily convince you that the Omega is, of all separators, the separator you want, because it will give you the best service.

Lansing, Mich.

if they be turned out to pasture in spring and early summer the fresh feed will increase the flow of milk for two or three months, then they may be dried off during the last half of July and during the period when pastures are bad and milk flow is naturally the smallest they will be resting from their labors. Skill in handling the dairy cow will add twenty per cent to her returns during the year.

J. P. Fletcher.

#### Brains in Dairying.

I happened at New Douglas, Illinois the day on which a special meeting of the dairy farmers had been called by a large milk shipper, who was desirous of getting more milk and was bidding a little higher price, as well as offering some special inducements to the farmers in the way of establishing a creamery and milk shipping station, providing they would guarantee him, at least, seven-eighths of all the milk produced in that vicinity and shipped from that station. The milk had formerly been going to another St. Louis concern, and the farmers feeling that they had an opportunity of getting a little better price for their milk, came out in numbers to attend the meeting.

I had been traveling through that section for several days, and pretty well understood some of the conditions that were holding those farmers down to an unprofitable basis, in production of milk, on the St. Louis market. I never visited a section where I found so many poor, dependent farmers. The universal opinion was that the only reason why they were not making money in the production of milk, was because the price was not high enough.

Now, I believe in selling milk, or any article of merit at the highest possible price, but those farmers were not getting the lowest price for their milk; the trouble with them was the manner in which they were trying to produce milk. While it is not always the case, it was a fact in this instance, that the milk shippers were really better to the farmers, in the price they were paying for the milk, than the farmers were to themselves, in the poor, unscientific manner in which they were conducting their work.

They were not trying to solve the problem of supplying milk in the winter months, when the price was high, but they would substantiate any statement that was made to the effect that they should produce milk in the summer, and let their cows go dry in the winter, simply because of the high cost of feed stuffs. These same farmers were letting their cows run out in the corn stalk fields during cold, bleak weather. One day the ground would be frozen, and the next day mud would be ankle deep, because being considerably farther south, the ground does not stay frozen hard all through the winter.

The barns in which their cows are kept are very poor buildings. If you were to ask one of them why he did not build a good barn, or a warm stable at least, he would tell you that lumber was too high and the price of milk too low; nevertheless they were producing some milk, and when I asked one of them, why he traveled two miles to deliver twenty odd pounds of milk, he could find no reasonable excuse for doing so.

That same man had enough cows on his farm that, had he been taking good care of them, had he been feeding them properly, he could have delivered at least four and possibly five cans of milk daily, of eight gallons each. He was feeding twelve to fourteen cows and they were all dry with the exception of three, and they were strippers. Just think of

this condition right in the middle of December when the milk shippers were bidding \$1.40 per cwt. f. o. b. the railroad station where the farmers delivered their milk. He had no milk to deliver, practically speaking, at the time when milk would bring a decent price. His cows were fresh on grass and stayed fresh for perhaps six months when the price of milk is usually at the lowest point of the year; then when he commenced stabling his cows, he housed them in poor stables, gave them awfully poor feed and worse still, he gave them practically no attention, and did not seem to realize the importance of even treating the cows kindly.

He was the most outspoken man at that meeting in condemning the milk shippers for giving such ridiculously low prices for milk. No wonder that man did not make milk at a profit. I believe it was the first time those farmers, as a class, had ever listened to anyone advocating warm stables, plenty of feed, kind treatment and good cows for a foundation to bring them success in producing milk, instead of continually harping on the price of milk as the only means of success.

From New Douglas I traveled to Shipman, Illinois, not far distant on the Chicago & Alton road. Here I found a progressive lot of farmers who for several years had been shipping practically as much milk in the month of December as when their cows were on grass. I found that these farmers were feeding their cows plenty of good milk-producing feeds, in the belief that to get results out of them they had to feed results into them. They were better dairymen and were imbued with the idea of dairying every month in the year. I visited the farm of Mr. Herman Shultz, who was milking twenty-two cows, most of them either very high-grade or pure-bred Holstein-Friesians. He was shipping between eight and nine cans of milk per day, each can containing eight gallons, and his milk check for the month of November was \$316.

He was feeding a ration of hominy feed, dried brewers' grain with shredded corn fodder and clover hay for roughage; he was also giving them an occasional mess of corn on the cob, sliced up. I asked him how many pounds of feed he fed daily and he told me that he let the cow take care of that; only in a general way did he limit the amount of feed—that he gave them all they would eat up clean with a relish. A cow that was about dry he did not aim to give quite a full feed, but any cow that was milking was getting all the feed that she wanted, which largely accounted for the good flow of milk that his cows were giving.—J. W. Anderson, before an Illinois Farmers' Institute.

#### Cod Liver Oil for Calves.

To the Editor of The Homestead:

Experiments have recently been made in Wisconsin in the use of cod liver oil for calves as a substitute for whole milk in rearing which tend to confirm the results hitherto obtained, namely, that calves to which whole milk is fed do the best, although the system of feeding cod liver oil is decidedly the more economical.

The calves were given whole milk for the first six weeks of their existence. They were then divided into two lots. One lot was given the same food as before, namely, whole milk; the other being given an increasing quantity of separated milk and cod liver oil, while the whole milk was discontinued. At the latter period the oil which was supplied reached a weight of two ounces per day

per animal, and the separated milk amounted to ten pints, which was increased to twelve pints a month later, without any extra oil, though the other lot had the same quantity of whole milk as before.

Without going fully into details, the whole milk was valued at sixteen cents per gallon; therefore the daily cost of each of the calves works out about twenty-four cents when the maximum allowance of milk was given. If the separated milk is valued at four cents per gallon, the milk for the calves fed with it would be six cents per head per day, to which has to be added the cost of the cod liver oil, bringing it up to nine cents per day. The difference in the value of the calves was considerably in favor of the cod-liver-oil-fed ones, after the cost of the feeding material was taken into account. It is very rightly pointed out by the experimentalist that the amount of fat present in the whole milk (one and one-half gallons) and in the same quantity of separated milk, plus, in the latter case, two ounces of cod liver oil, was about the same. It therefore follows that the cod-liver-oil calves might continue to get their two ounces of oil daily for about four months, the period during which the other lot received whole milk. Then if we assume that whole milk contains three per cent of butter fat, in one and one-half gallons a calf gets something like seven and two-fifths ounces of fat daily, which is really four times the amount of fat supplied to a calf getting one and one-half gallons of separated milk and two ounces of cod liver oil.

In order to determine, if possible, whether the oil might, with advantage, be continued after weaning to those calves that were accustomed to it, a further experiment was conducted which went to prove that the oil could be so given and that the animals to which it was given rapidly increased in weight until they slightly exceeded those to which whole milk alone had been given through the same period.

Waukesha Co., Wis. W. Stenson.

#### AN INTERESTING STORY.

Mr. J. R. Naylor, a practical Illinois farmer, some years ago began to wonder why an improvement could not be made on the harrows that are used on farms. He gave the problem much study and now has invented a harrow which he believes is the best implement of its kind for the preparation of a thorough seed bed. He calls his harrow the Two-In-One Harrow, for the reason that it does both the work of a spring-tooth harrow and a spike-tooth harrow. It can be seen at

## TRADE IN YOUR INFERIOR SEPARATORS

Many users who would like to change their inferior machines of various kinds for a new

### DE LAVAL CREAM SEPARATOR

do not understand that while such second-hand machines have no salable value the De Laval Company makes very fair "trade" allowances for them, just to get them out of the way and by means of this practical illustration of the difference between good and poor separators stop the sale of others like them in the neighborhood. Nobody is injured by the re-sale of these old machines as they are simply "scrapped" at their old metal value.

Then there are many thousands of DE LAVAL users who should know that they may exchange their out of date machines of ten to twenty years ago for the very much improved and larger capacity ones of today. These old machines are refinished and sold over again to those who do not think they can afford the price of new ones.

Write in a description of your old machine—name, size, serial number, and date purchased—or else see the nearest DE LAVAL agent about it.

**Easy Corn Cutting**

MEN used to think that almost anything with an edge and a handle would do for corn cutting.

Now we know a makeshift doesn't pay.

The quality and shape of your corn hooks are of as much importance as the quality and shape of your mowing machine knife.

**Ask Your Dealer For TRUE TEMPER Tools.**

The True Temper label on a corn hook is the strongest guarantee expert manufacturers can give you, that the quality is the finest and the shape the most correct they can produce.

No tool—Fork, Hoe, Rake, Hook, Weeder, whatever it may be, is allowed to wear the True Temper Label until it has been tested and found to come up to its standard of requirements.

The special steel used in True Temper corn hooks makes a sharp cutting edge that holds.

The correct shape gives you the right swing and enables you to work rapidly, cutting your corn alick and clean.

Ask your dealer to show you the complete True Temper line. "The best tools you have ever bought at the same prices you have always paid."

Write today for our FREE BOOK, "Tools and Their Uses." It tells how to save time and money, by the use of proper tools.

## GOLD MEDAL SEED CORN

FROM stock that won the \$2,000 Burg wagon. 300 bushels Reid's Yellow Dent home grown and shelled, \$2.00 per bushel in ear, or \$1.75 shelled. Satisfaction guaranteed. "Twenty years' experience."

W. P. COON, - - - AMES, IOWA

## The Jewell Nursery Co.

(Box 16,) Lake City, Minnesota  
Capital \$500,000.00. 1200 acres. Largest Nursery in Northwest. Established 1868. Hardy seeds, trees and plants. Agents wanted—Good pay.

REID'S SEED CORN For Sale by D. L. Pusey, DeWitt, Ill., the man who grew and exhibited the champion ear of Iowa in 1904 and in January contest in 1907.

## HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

### FROST PROTECTION.

It has been found in the past that a very early spring entails unusual danger from late frosts. When orchards and berry fields are of limited extent, it is possible and wise, to adopt protective measures. If your work proves to be needless well and good. Pile near where the protection is desired, usually on the north and west of the fruit, a few loads of litter, rotten straw, old hay, manure, corn stalks, or any thing that will make a smoldering fire, and much smoke. Have on hand a barrel of coal tar or crude petroleum.

After a few showery days, is likely to come the rub. If the mercury at sundown, stands at thirty, it is likely to drop eight or ten lower before morning. That means a damaging frost. The wind should be right to carry the smoke over the orchard. You may need to move some of your fuel. Sprinkle the piles liberally with coal tar. Then about one or two o'clock fire them. Watch and keep them active, but smothered until sunrise. The smoke drifting over the endangered fruit will keep the air above the freezing point. A few hours' of active vigilance has often saved a crop worth hundreds of dollars. If the frost is severe you may be only partially successful, but a half loaf is better than none.

### THINNING FRUIT.

Nature makes liberal plans, and allows a wide margin for possibilities of loss. She always aims to have enough, and something to spare. Hence if weather conditions are all favorable, our fruit trees are often over-burdened. They are in the unfortunate condition of the man who has taken that which he cannot complete, and do good work without a loss. The tree has not vitality enough to perfect in size and quality its full load of fruit.

Man's intelligence is needed to aid the blind efforts of nature to do her best. He sees that each separate fruit must have light and space, so he removes a third or even a half of it, throwing out the poorer specimens.

The result is that at harvest time he has perfect fruit of large size, giving a greater measured yield than if the whole crop had been allowed to remain.

And the money value is even proportionately greater, because the quality insures a higher price.

When the young apples are a third grown, the size of plums, set the boys to thin them out. It will be labor wisely directed.

Plums often needs the same treatment, but the work is more tedious than with the apple. One plum man's method is to clip out about a third of the bearing twigs, thus trimming the tree and thinning the fruit at the same time.

### OLIP THE FRUIT STEMS.

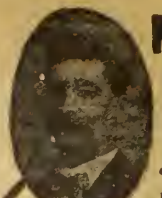

All but one leaf should be removed before setting the strawberry plant, and culture should begin at once. Never wait for the weeds to start. As the leaves develop in the course of two weeks, you will notice fruit stems appearing. Destroy them as you would snakes or skunks. They are enemies. Cut them promptly, even before the bloom opens, if possible. Why?

Because the effort to produce seed in any tree or plant is exhaustive. You must forestall the instinctive effort of nature to do her work, because the plant is not in a healthy, thrifty condition. To produce fruit is a heavy tax on the vitality of the plant. Your aim is to have the plant prepared for future usefulness. For every berry which you allow to develop and ripen the first season, you sacrifice a dozen or more in prospect for the second year.

### The Strawberry Plant.

To the Editor of The Homestead:

In June, 1906, I plowed down a clover sod for the potatoes. I top dressed it with a thin coat of manure and planted the potatoes early. The crop was dug as early as possible and the ground sowed to rye. This rye will be turned under this spring as soon as the soil becomes dry enough for strawberries. I believe this will give one about an ideal bed, but to make it a little better I will give it another coat

## My 2-in-1 Harrow Makes a Perfect Seed Bed in HALF THE TIME

BECAUSE it does the work of both a Spring Tooth and a Spike Tooth Harrow at one time and at one operation.

Because, you see, my harrow is BOTH HARROWS IN ONE.

If you have to go over your field four times now—you'll only have to go over it twice with my harrow.

If your ground is in such shape that you now go over it twice, then only once over will give you an even better seed bed when you use my harrow, and you can follow right along with a planter.

That means if it rains overnight you haven't got your work to do over again.

On newly broken sod you can work across the furrows (instead of with them) and not pull up a single sod or choke the teeth. You can prepare new ground with my harrow in 1/2 the time you can working the old way—using two harrows separately.

One lever instantly adjusts my harrow so you can use the spring teeth alone—or the spike teeth alone—or both together—or you can throw all the teeth up out of the way so that the frame will slide along the ground like a stone boat.

When a live farmer knows about my harrow he wants it. I can name, off-hand, twenty places near my farm in Cass Co., Mich., where you'll find good spring tooth and spike tooth harrows out in the barnyard with grass growing up around them.

The farmers have thrown them away and are using my harrow alone—and they're MAKING MONEY by doing it.

### HOW I CAME TO INVENT THE 2-IN-1 HARROW.

I always had the same trouble you've had in getting my ground ready.

It seemed like there ought to be some way around it. So my brother and I got busy one winter AND SOLVED THE PROBLEM.

This is the way we figured:

A spring tooth harrow wants to keep digging in all the time. That keeps the frame pressed hard on the ground and it's a tough pull on the horses. A spike tooth wants to keep jumping up all the time, you have to put some heft on the top to keep it down. The horses have to drag the heft as well as the harrow.

So we made a 2-in-1 harrow—spring and spike teeth together. That season we used it on our farm and it worked just as we figured it would. The spikes kept the springs from digging in too far, and the dig of the springs kept the spikes down to their work—and once over (except on extra bad ground) left a smooth, even, perfect seed bed.

That's why my 2-in-1 Harrow was easier on the horses than either a spring tooth or spike tooth alone and SAVED OVER HALF OUR TIME getting ready for planting.

The best proof of how really good my harrow is lies in the actual fact that every harrow I have sold has since sold from two to five more.

My Harrow is such a really wonderful thing and such a TIME and MONEY saver for the farmer that I expect each harrow I place will keep on selling others in the neighborhood. So I have decided to make a

**SPECIAL CONFIDENTIAL PRICE** to the first man in a locality who writes me—the confidential price will be AWAY DOWN, too.

Don't even consider buying a harrow till you get my confidential introduction price.

## We Breed 7 Varieties of SEED CORN

We raise every ear of corn sold by us for seed on our own farms. We cultivate 7 large farms; each of them produces a pure variety of seed corn. Our plan of cultivation insures your getting pure bred corn, the best varieties.

We have increased the yield of certain varieties from 35 to 90 bushels per acre on the same land. That shows what breeding will do. If you want some of that kind of seed corn send your name for catalog. We sell hundreds of bushels of seed corn to our neighbors annually; they tell us it is the best they can find anywhere. That's proof that our seed is what you want.

Box 16 W. W. VAN SANT & SONS Farragut, Iowa.

## EARLY SEED CORN

94 BUSHEL RATEKIN'S QUEEN OF NISHNA, Yellow, and EARLY BLOODY BUTCHER, Red. Mature in 80 days, 10 days ahead of Pride of North, and yield twice as much per acre. Grow especially for our Northern Seed Corn trade, but sent everywhere for late planting. Made yield of 94 bushels per acre here on our trial grounds last year. Price \$1.25 per bushel, sacks free. Ninety-six to 100% strong germination. Big Seed Corn Book free. Save this advertisement, as it will not appear again. Address, RATEKIN'S SEED HOUSE, SHENANDOAH, IOWA. (Largest Seed Corn Growers in the world.)

## SEED CORN

NEW GOLDEN WEST and all the best varieties of choice, selected, thoroughly tested seed corn, which have yielded 75 to 218 bushels per acre. Costs Only 25 cents Per Acre for Seed. Large, descriptive catalog of Seed Corn and all kinds of Farm and Garden Seed mailed free if you mention this paper. IOWA SEED CO., DES MOINES, IOWA.

## GRAIN FREEMAN BROS. & CO., HAY

Prof. Holden of Ames College, Iowa, told us Feb. 7th that he regarded Goddard's "Silver King White Dent" as a remarkable corn. One of the very best. We control 1906 crop of "Silver King" grown in this county (Winnebago) by the man who perfected and named "Pride of the North." Let us send you history of this wonderful corn. We grow all standard varieties. Sow Northern Grain Seeds. Get our catalog. THE ADAMS SEED CO., Decorah, Iowa.

I prefer a cool, damp, still day for planting, but when I have so many to plant I do not stop for anything but rain. Those who have to buy their plants should never try to set them when the ground is dry and hot or the wind blowing strongly. Those who have plants of their own should leave them healed in and water them occasionally.

Where I grow the berries in matted rows I make them four feet apart; if in hills or single hedge rows I make them three feet apart and in double hedge rows, three and a half feet apart. For cultivating I use a fine-tooth cultivator, running twice in a row at first and later in the season only once in a row. I find the best cultivator is one with twelve teeth, and should be made to widen or narrow to suit the row. I start the cultivator about a week after the plants are set and continue as I think necessary until September.

I use a good steel garden rake for the first hoeings and after the runners start I use a hoe.

I firmly believe in mulching and my old bed was mulched with wheat straw early last fall before the ground was frozen. I find nothing better than wheat straw; the chaff and fine particles settle down around the plants and make perfect protection.

When I remove the straw in the spring

### HURST POTATO SPRAYER ON FREE TRIAL

None money in advance—Pay when convenient. Sprays Everything—Trees; Potatoes, Truck, etc. 4 rows at a time—20 acres a day. Doubles Your Crop—extra yield one acre will pay for its first season. A boy can operate. GUARANTEED 3 YEARS. Wholesale Price (where agent). After trial, if you keep it—pay when you can. Special FREE OFFER for first one in locality. "Spraying Guide" and full information. FREE. H. L. HURST MFG. CO., 56 South St. Canton, O.

## CLOVER

Medium Red, Mammoth and Alsike Clover; also Alfalfa, Timothy, Blue Grass, etc., of superior quality. It will pay you to buy early this year. Ask for prices and one of our large, illustrated catalogs of farm and garden seeds. Mention this paper.

IOWA SEED CO., Des Moines, Iowa.

AGENTS wanted to introduce Burbank's wonderful seedless plum—Miracle, and sell our well-known hardy nursery stock. Big pay. Best proposition offered salesmen. Oregon Nursery Co., Detroit, Michigan.

## SEED CORN

Frank Large Yellow Dent and Reid's Yellow Dent seed corn for sale by H. P. Wilkinson, Mitchellville, Iowa.

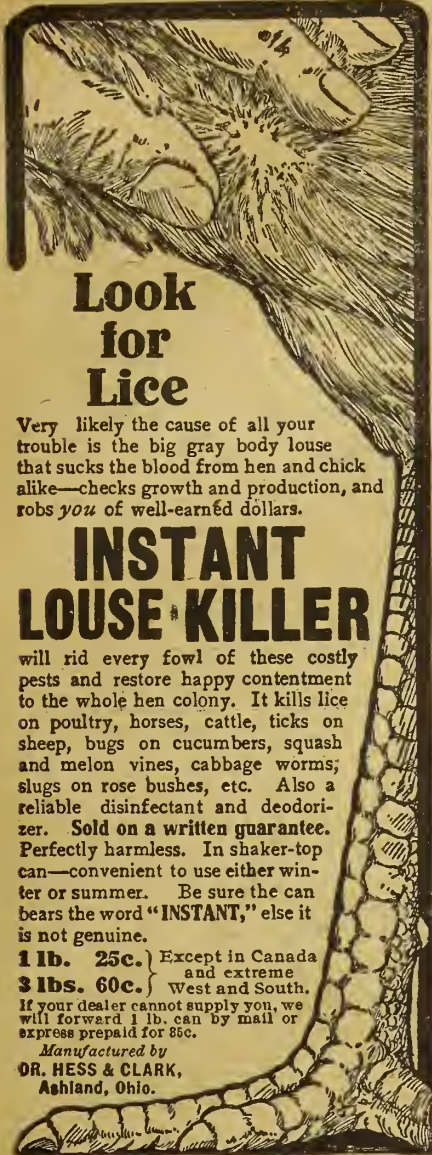

there is enough of the fine stuff left to keep the fruit out of the dirt.

W. Stenson.

Plant gooseberries in good rich soil and give a liberal dressing of manure every season. Regular pruning every year is essential for the production of fine fruit. The English varieties especially do best in partial shade and should be heavily mulched.

To prevent mildew spray bushes soon as leaves appear and several times during the summer with potassium sulphide (liver of sulphur) one ounce to four gallons of water.

## Look for Lice

Very likely the cause of all your trouble is the big gray body louse that sucks the blood from hen and chick alike—checks growth and production, and robs you of well-earned dollars.

## INSTANT LOUSE KILLER

will rid every fowl of these costly pests and restore happy contentment to the whole hen colony. It kills lice on poultry, horses, cattle, ticks on sheep, bugs on cucumbers, squash and melon vines, cabbage worms; slugs on rose bushes, etc. Also a reliable disinfectant and deodorizer. Sold on a written guarantee. Perfectly harmless. In shaker-top can—convenient to use either winter or summer. Be sure the can bears the word "INSTANT," else it is not genuine.

**1 lb. 25c.** Except in Canada and extreme West and South.  
**3 lbs. 60c.** West and South.

If your dealer cannot supply you, we will forward 1 lb. can by mail or express prepaid for 85c.

Manufactured by  
**DR. HESS & CLARK,**  
 Ashland, Ohio.

## POULTRY DEPARTMENT.

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

### A FEW "GOOSE POINTERS."

"When the fattening season arrives," says an experienced goose farmer, "keep the geese shut away from bathing water, and feed barley meal, corn meal and beef scraps, chopped celery, and keep in a subdued light for three or four weeks, then let out for a couple of days to enjoy the use of a pond. Then return to their clean quarters, and feed on barley meal and milk, and chopped celery for two or three days, letting them go for twenty-four hours before killing, and you will have a goose fit for a king."

### Culling.

To the Editor of The Homestead:

According to Webster, culling means to separate, select, to pick out. The poultry raiser's culling should begin with the birds that are to furnish the eggs from which the future chicks are to come. First remove every bird that is not vigorous. Do this with absolutely no regard to the score or egg record of the individual. Only vigorous breeding stock will then remain. This healthy, vigorous flock should again be culled. The early hatched chicks are the ones that pay the big profits, and to them we must look for the breeders that will give the best results. No one can afford to breed from late hatched chicks or unmatured stock, for such stock will breed nothing but disappointment in the shape of weak, scrawny birds which are almost impossible to raise.

Select nothing but strong, healthy birds that have good, blocky shapes, legs, bills and eyes of the right color, from what ever variety you are raising. Discard all birds that have not made good growth and those that are inclined to be long on their legs. Long legs seem to be easier to get than most any other defect. Cling to the breeders which have this year proved their qualities. If properly mated, they will give you a nice, uniform lot of chicks of high quality.

In selecting breeders from your own youngsters, choose those that are wholly sound and that are known to be the offspring of good breeders. Save others that have showy qualities for the fancy trade, and assign the faulty ones to the fattening pens. Many a season's work has been a failure simply because of the mistakes in mating. The stock may have been good but not well mated, and the result, therefore, was a failure. To the beginner it may seem that by mating his highest scoring male with his highest scoring females he has made his best possible mating and can confidently look for good results in their progeny.

This may at times prove correct but not always; it depends upon circumstances. No bird is perfect, and of course has its faulty points as well as its good ones. Now to mate a male bird having a faulty comb with a like defect we must not expect the outcome to be good, for the offspring is apt to come with this defect magnified. We should not expect good results from mating a male and a female with the same defect, for we will get nothing but bad results. It requires but little thought for one to plainly see this and cause him or her to say that with such a male one must mate females having good combs if good results in that direction are to be expected. You may say by so doing that you will not always obtain good results or bad, but you will not always have bad chicks; you will receive many good birds. The eggs should be culled, and the chicks should be culled, if they need it. Cull out all that don't look or act right. Watch closely for a chance to cull again. Get the habit of culling. It would make a splendid fad, with an effect upon the poultry business that it will be safer for me to leave to your imagination than attempt to describe.

Polk county, Iowa.  
 Mrs. B. F. Wilcoxon.

### Turkey Raising.

To the Editor of The Homestead:

A subscriber, Mrs. Stepanec, sends the following query:

Will you give some information through the columns of your paper on the subject

of turkey raising? Tell us how to feed and care for them; what to feed, how often, how to keep them free from lice, what is the best grit, etc.

To fully answer this correspondent's questions would require several pages. Turkey raising is quite a science, and there have been many discouraging developments, especially in the eastern and middle states, where the disease called "blackhead" has almost destroyed the industry in many localities. In the central West, and on toward the setting sun, turkeys do well under favorable conditions. It requires unceasing care and vigilance to succeed in this industry, but those who are willing to give the needed care and attention, often realize good profits.

In regard to feeding, it is rather "how little," than "how much." Young poults require small rations. More are killed by over-feeding than under-feeding. Grit is a necessity of their nature, and it must be generally supplied. "Chick-size" in any sharp, limestone grit will answer. Hard-boiled eggs—in small amounts—and cottage cheese are greatly relished. The commercial chick-foods are good. No wet mash or sloppy food should be given little turkeys. A flock of turkey babies seems a hungry lot, but if you do not harden your heart and keep them on what may seem to you a starvation diet, you may as well give up all hope of success.

The lice question is also a puzzling one. The time to begin to fight this trouble is before they are hatched. Keep the mother turkey or chicken hen well dusted with good lice powder, and give her a most thorough dusting just after the hatch. Keep up the applications from time to time, dusting the poults occasionally. Many recommend grease. Grease is sure death to lice, it is true, but it is too apt to prove fatal also to the young birds. Faithful use of a reliable lice powder is the safest method.

Dampness is surely fatal to young turkeys. If you cannot plan some way by which you can keep the broods of poults confined until the grass is dry in the morning, also to keep them in a dry place during rainy weather, it will be of no use to try to raise turkeys at all. The mother turkey is not to be trusted. We once tried letting the old mothers take charge of their babies, and before it was fairly daylight, they would be off to the alfalfa fields, the wettest spot on the farm, and the poults would soon be as wet as if in a pouring rain. The absolute failure of that year taught an important lesson.

poultry keeping comes in the endless small details that must be looked after. The aggregation of littles is well exemplified here. Time and patience and strength are often sorely taxed by the multiplication of duties that in themselves seem trivial.

Take, for example, the rearing of little chicks. The old-time methods, hoary with age, and still adhered to by a majority of poultryraisers, teach that the wee babies must be fed five or six times a day, just what they will eat up clean in a short time. Of course, when mash and wet food is given, this advice has some reason in it, but the newer method of dry feeding quite revolutionizes the matter. The commercial chick feeds are coming into such general use that it is easy to graduate from wearisome detail to common-sense ways.

By managing rightly in the start, little chicks may have food before them all the time, where it cannot be wasted or fouled. It is a well known fact that chicks must not be fed for thirty-six hours after hatching, as nature has provided them with food in the form of the egg yolk, absorbed just as the tiny bird enters into its new existence. Time must be given for this to digest, else digestive trouble with all its train of fatalities will be sure to follow.

For brooder chicks, when the time for food arrives, scatter grit freely about in the litter. In shallow boxes, put some of the chickfood, or your own formula of ground grains, placing these boxes where the chicks can find them and help themselves at their own sweet will. A very little experimenting will show that the chicks will not gorge themselves. They eat whenever they are hungry, and each one has an equal chance. A box of charcoal is a good thing. Grit must always be handy, and green food must not be forgotten. After they are ten days or two weeks old, a box of beef-scrap should also be at hand. The little fellows will balance their own rations and be as happy as clams while growing in a truly encouraging fashion.

When old enough to be let out on free range, the green food will not be so imperatively demanded. Their runs should

### The Value of Labor-Saving Methods.

To the Editor of The Homestead:

The old saying that "Time is Money," is true in many ways. Not only the saving of time, but of strength as well should be considered. The drudgery of

be so arranged that they can go in or out at will. It is a pretty sight to see two or three at a time run in and take a few pecks at the food, enough to satisfy their needs, then off again in search of seeds, tender grass blades, bugs and worms, others taking their places at the hoppers or boxes. As they grow older, something beside the small boxes, which sufficed when they were babies, must be provided. Troughs are quite satisfactory, if a covering can be provided to keep them dry in a rain storm.

Small things made out of good-sized boxes, containing the food and water, so arranged only the chicks can enter, are very satisfactory. These have the added advantage of furnishing shelter to the chicks when necessary.

By thus placing the food within reach, numberless steps are saved and many precious hours of time. What a relief to the farmer's wife amid the hurrying duties of the early morning, to know that the wee chicks are getting their own breakfast, and can wait happily and in comfort to be looked after when her convenient time comes along! And when the feed receptacles are filled for the day, and the water dishes supplied with fresh drinks, no more attention need be given till it is time to see that they are tucked away safely for the night. Of course, cleanliness must be assured, but with dry feed the droppings are dry and filth does not accumulate as with wet food.

Even with hens and their broods, this plan may be modified and made successful. When the first feed is given, put some whole corn in with the chick feed for the old hen, and let the chicks look after their own rations. The same kinds of food are necessary as with brooder chicks. Some may ask if it is necessary to have the box of beef-scrap when the chicks are on free range. Where there are a large number of fowls, the supply of insects may run short, and it is well to have the supplementary supply available. It has been proven by experiment that the hens and chicks will only eat what animal food they need if it is always at hand. If there are plenty of the worms and bugs, the beef-scrap will not receive much attention. As animal food has much to do with the sturdy growth and development of the chicks, it is not good economy to stint the supply.

After the hen and her brood run at large, feeding racks may be placed here and there for the chicks' food, keeping the larger fowls out. In fact, by using one's ingenuity and common-sense along this line, it will not be found a difficult problem to solve. Subscriber.

### The Management of Brooders.

To the Editor of The Homestead:

It is strange, but nevertheless true that there are many more poor brooders on the market than poor incubators. Some manufacturers who put out a pretty good hatching machine, fail utterly in the brooders bearing their trade-mark. A few home-made brooders have been

successful, but the greater part of these are veritable death-traps.

Long years of varied experiences in artificial brooding have made certain to my mind one fact. It is this: It takes the best of material and workmanship to construct a brooder that will successfully meet the difficult conditions. Therefore a really good, trustworthy brooder cannot be a cheap one. The standard makes that have proved their reliability, are all more or less costly affairs. But when we consider the value of a single hatch, it will be readily seen that the increased cost is soon met by the greater number of chicks raised to a profitable maturity.

Out-door brooders present a more difficult problem than in-door. Greater extremes of outside temperature must be met; there must be comfortable conditions for the chicks when confined within by stormy weather; the care of the lamps, especially in high winds, is often a serious question. I well remember one experience in Illinois, that came near turning my hair gray at the time. A fine hatch had been placed in a brooder, and for a week everything was lovely. The night of April first it was so warm and balmy, that it did not seem as if winter would venture our way again that spring. As I tucked the babies away for the night, noticing how they sprawled about in happy contentment, I felt as if success was assured, and that I ought to be, and was, a grateful woman for blessings vouchsafed.

But alas! Early the next morning my husband awakened me with the tidings that a veritable blizzard was raging, and that I had better hurry out to look after my chicks. Barely was there a quicker toilet made, and I hurried out, only to hear, long before I reached the brooder, the cry of the cold little fellows. The temperature was, of course, far below the right point, for I had gauged the lamp flame by the weather of the preceding night. I was indeed in a quandary. The terrific gale made the lamp smoke when it did not extinguish it altogether, and the prospect seemed fair for the loss of every bird. But I was determined not to say die if I could help it, and all day the family forces battled with the situation. A "jug-mammy" was filled with hot water and put inside the hover room; quilts and blankets wrapped about the brooder, which had been turned around to put the lamp on the side away from the wind.

The next day was bitterly cold, but less windy. The weather was so unfavorable, that those chicks were three weeks old before they ever stepped on the ground. A few weaklings succumbed, but the rest came out strong and sturdy, and were the admiration of every one who saw them.

Wind is one of the worst things to combat in using out-door brooders. In Nebraska, particularly in early spring, gales are so frequent that it almost precludes the use of out-door appliances. Having no brooder house, I had to meet this difficulty in some way. So we set ourselves to experimenting. First, we ran the flue pipe straight through the brooder, with an outlet at the opposite end, instead of allowing it to turn and form the outlet for smoke and gas under the hover chamber. Besides its liability to smoke, the soot and gas came up through the floor, making my White Wyandotte babies a smutty lot. The plan of the straight pipe did not work at all, the wind extinguishing the lamp in even a gentle breeze. Finally we hit upon the idea of running the flue pipe through both chambers to the opposite end, across that end, and back half way across the front of the brooder; then turning at a right angle out into the open air, with a joint extending a few inches upward. This plan worked well, and the lamp held its own last year in some stiff gales.

A suggestion found in regard to additional ventilation for the brooders, was also of great benefit. A poultry woman using this brooder found that her chicks thrived much better if she raised the cover a trifle, keeping it raised by a bit of wood or iron slipped in. I tried it, and found that results were much more satisfactory.

Many women have formed a prejudice against all brooders because they have found certain makes unreliable, and therefore, try all sorts of make-shifts rather than venture any more investments in the brooder line. This is foolish, because there are good brooders. But when a good brooder is secured, it will be one of the best helps possible in

raising a large number of chicks. Add to this the dry-feeding method, and the work of raising chicks will be reduced to a minimum quite astonishing to one who has always adhered to the old methods. Subscriber.

Sternberg says the true table fowl is long in the body, wide in the back, full in the breast, and plump over the keel—meaty all over. Taking its legs as a center, there must be more body in front of the legs than behind. The shape is a parallelogram. It may be carried more or less uprightly, depending on the breed.

### POINTERS.

—Buff Rock eggs exclusively are offered for sale by Mrs. J. J. Rink, of Shelby, Iowa.

—Silver Laced Wyandotte eggs are offered for sale by Mr. C. T. Gollehon, of Blair, Iowa.

—Mrs. E. F. Escher, of Manning, Iowa, is offering Barred Plymouth Rock eggs for sale at popular prices, and from high-scoring birds.

—Messrs. Aye Bros., of Blair, Neb., offer Barred Plymouth Rock eggs for sale from the Bradley and Norval strains at \$1 per sitting.

—White Wyandotte eggs exclusively—that is the kind that are being offered for sale by Mr. A. J. Podendorf, of Logan, Iowa. He prices these at \$1.50 per fifteen or \$2.25 per thirty.

—Some extra choice Barred Plymouth Rock eggs, cockerel or pullet mating, are offered for sale at \$2 per fifteen by Mr. W. W. Scholes, of Onawa, Iowa. These are from exhibition birds and are all right.

—White Wyandotte, White Holland turkey and Toulouse geese eggs are offered for sale by the Forest Home Poultry Farm, Box 253H, Audubon, Iowa. This farm have the very best of stock and can absolutely be depended upon.

—Mrs. L. C. Reece, of Prescott, Iowa, is offering Barred Plymouth Rock eggs for sale from her high-scoring pen. These will be packed in a nice basket which will insure safe arrival at destination. Write her at once and send her an order.

—Mrs. J. A. Campbell, of Manning, Iowa, in furnishing copy for her new advertisement that appears on page 13, writes: "We are getting more orders than we can fill for Mammoth Bronze turkey eggs. However, we still have one tom to spare."

—We wish to say to Homestead readers and poultry raisers that Mr. W. J. Smith, of Campbell, Iowa, who has been advertising with us, still has some fine Barred Plymouth Rock pullets and Mammoth Bronze toms for sale. His turkey hens are all sold. Write Mr. Smith if you are in need of a good tom or pullets.

—Mrs. Laura Mather, of Clarksville, Iowa, writes: "The hatches from my Rose Comb Brown Leghorn eggs are giving good satisfaction. From one hatch of 102 fertile eggs I got ninety-eight fine chicks. From another of 150 eggs I got 139 chicks. All doing well." See her advertisement on this page. She guarantees satisfaction.

—Mr. J. G. Goddard, of Deep River, Iowa, who has been a breeder of Light Brahmas for over twenty years and now has a fine flock, well marked and good layers, advertises specially selected eggs from his flock on this page. Any order that you may place with him will receive his best attention. Mention The Homestead when you write.

—Mr. Ben DeJaeger, of Waterloo, Iowa, whose poultry advertisement appears on page 13, writes that his Barred Plymouth Rocks are of the Lambert strain and score as high as 92. The Single Comb Brown Leghorns are of the Schaffer strain, and all of his hens are doing fine and have produced a nice lot of eggs. He is prepared to quote prices on the dozen or the hundred, and we can safely say that orders will be filled satisfactorily. Kindly mention The Homestead when you order.

## OUR HOME DEPARTMENT.

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 727, Kansas City, Mo.

### WITH THE EDITOR.

What the editor has for you this week is something entirely different from anything ever before presented With the Editor; before its presentation a few remarks are in order.

As hinted here a few week's ago, all sorts of things come to the editor of a Home Department. Among those which most disturb the editorial peace are what the senders consider poems. Sometimes these effusions, not infrequently yards in length, are positively painful; occasionally they are refreshingly good, in spirit if not in form, in promise if not in effect. The writing of poetry is a fine art; there is more to it than imagination and the faculty of making rhyme; even where the divine afflatus is present knowledge of prosody and versification must be acquired if the product is to commend itself to lovers of poetry. And even after the rules of meter are mastered it is only once in a great while that a fine poem comes into the world like Minerva, who, according to legend, sprang from the head of Jove, full grown and all in armor clad. A beautiful poem is usually a growth; sometimes a slow growth. Tennyson, perhaps the most finished poet of the Victorian age, labored over his poems, writing and re-writing a single verse, sometimes a score of times, which allusion brings me to remark number two.

Among my treasured possessions is a copy of the Rubaiyat, showing the various stages through which the poem passed as it grew in the hands of Fitzgerald. It is a fascinating study to trace the evolution of the poem from the translation of the first edition through the second, third and fourth editions. Sometimes Fitzgerald seems fearful lest he depart too far from the original; sometimes he transposes and manipulates as if he had the license of absolute authorship. And now we have come to my offering.

Some time last summer a little poem was submitted to me, the promise of which so appealed to me that I laid it before the Only Man—among this Only Man's accomplishments is a pretty touch of verse-making. He worked at this poem for some little time. One change followed another until "My April" was so altered I doubted the propriety of using it without first submitting it to the writer. Her letter in reply was not intended for publication, but to complete the story it will follow the verse because it brings out the conditions which gave rise to the poem and illustrates a difficulty which always confronts translator and editor.

### MY APRIL—BEFORE.

Cowering as the beaten lily  
Bending 'neath the sheeted rain;  
Expanding as the opening rose  
When the sun beams forth again;  
Thus my soul seems e'er to be  
In its reaching God to Thee.

Yet my soul would feel despair  
As the flowers know the rain  
That it rise in buoyant fragrance  
When thy sun beams forth again;  
Thus my soul would ever be  
In its rising God to Thee.

Not all sunshine nor yet rain  
Would the rose, the lily, too,  
Lends a rarer bloom and perfume  
When from clouds the sun peeps thro';  
Thus my soul must ever be  
Till it triumphs, God in Thee.

—I. R. M. B.

### MY APRIL—AFTER.

Cowering like the beaten lilies  
Bending 'neath the sheeted rain,  
Rosebuds, shrinking in the storm blast,  
Wait till sunbeams dance again.  
Thus my soul seems oft to be  
In its reaching, God, for Thee!

But my soul so shrinking, drooping,  
Like the flowers in the rain,  
Quick will rise in buoyant fragrance  
When Thy sun beams through again.  
Thus my soul would ever be  
In its rising, God, to Thee!

Ope in sunshine, droop in rain,  
Doth the rose, the lily, too,  
So a rarer bloom my soul wins  
When after clouds the sun breaks through.  
Thus my soul must ever be  
Till it triumphs, God, in Thee!

A second rendering for the third verse might be:

Not all sunshine, not yet rainfall  
Would the rose, the lily, too,  
Sends a rarer bloom and perfume  
When after clouds the sun breaks through.

## Simpson-Eddystone Silver Greys

Handsome costumes are no longer confined to costly material. Simpson-Eddystone Prints, because of their beautiful patterns are used for the most stylish dresses. Some designs have a new silk finish.

Ask your dealer for  
Simpson-Eddystone Silver Greys.  
Three generations of Simpsons  
have made Simpson Prints.

PRINTS The Eddystone Mfg. Co. (Sole Makers) Philadelphia.

## A STRONGER FENCE—

Can be made of whole wire than of cut wire. That's why Advance is the strongest fence. Our stay wire is NEVER cut, but runs continuously up and down across the fence for many rods without an end. Thus we preserve ALL the strength of the wire, fully half of which is wasted in cut stay fences—sacrificed to convenience and speed in manufacture.

30 DAYS APPROVAL. Let us ship you what fence, etc. you need, on approval. After careful examination and comparison with other makes, if you don't like it, return it at our expense and get your money back. We have sufficient confidence in Advance Fence to make this offer.

WE PREPAY FREIGHT and guarantee safe delivery of your shipment. Write today for our Fence Book and Freight Paid Prices.

## Cancer Cured at Home

I have so perfected my Mild Combination Treatment that patients may use it at their home with as good results as though it were applied at my offices. I will gladly furnish to every sufferer positive and indisputable proofs that my treatment does cure Cancer. I will furnish ample evidence of my integrity, honesty and financial and professional ability. No matter how serious your case may be—no matter how many operations you have had—no matter what treatments you have tried—write for my book, "Cancer and Its Cure." It will cost you nothing and will tell you how you can be cured at home. Address,

DR. O. A. JOHNSON, SUITE 371,  
1233 GRAND AVE. Kansas City, Mo.

Have you a friend suffering from Cancer? Do them a favor they'll never forget by sending them this ad

Thus with my soul 't must ever be  
Till it triumphs, God, in Thee!

The verses as revised surely show an improvement. You must remember that I know so little of the rules of grammar, or the proper construction of sentences, or even punctuation, that editing whatever I may write is absolutely necessary. I will say, however, the second verse, while reading to me much clearer and better than the original, hardly expresses what I had intended it should. In my musings at the window when I began to think out the verse, I noted first the icy rain on the glass, on the grass and flowers after the long wait for spring, and followed the thought out in my own life, in the conditions surrounding us all, when a sudden gleam of intense sunlight brightened everything, and I began to think of the effects of continued sunlight, of the long, unbroken drouths and missing harvests, of the blight, of continued prosperity, of constant joy and pleasure, and it was something more than resignation, more than mere acceptance voiced in the line, "My soul would know despair as the flowers know the rain." It was an understanding of the demands of the spiritual, as well as physical; an understanding of the weakness of the flesh to sink beneath trouble, as the flowers under the rain weight, yet with the flowers at the first peep of the sun shedding the rain weight and standing already strengthened because of it. Realizing the blessing of affliction, I would receive it. Trusting you to use your own good judgment in the matter, I am, yours truly.—I. R. M. B.

### AMONG OURSELVES.

Skipping rope and marbles have been infringing upon the rights of pedestrians to sidewalks in the city suburbs for some weeks past; it is the time for out-of-doors sport; base ball has become a current topic. In response to Mrs. Custer County's call we have heard some very good things in regard to the desirability and undesirability of encouraging the game on Sunday; today we shall have a word of acknowledgment from her and then something on church attendance from An Iowa Soil-tiller:

How I wish Double Star lived in our neighborhood, and Mr. Kelley and Mrs. Kiowa County too. They are the kind of people I like to know. I do not object to the national game, for I can see nothing in it but what a boy or girl may not perform with pleasure. I believe in the same standard for both, and it would be nice where the farmer boys could play and their sisters watch them. The teams I refer to are composed of the smartest set of boys in town who go out for a lark on Sunday, needing the exercise. They are single men, except the ones required to fill up the team, but the latter prefer to leave their young wives at home. They do not take their dress suits in their cases any more than they do when they run into the city for a few days. Their Sundays are spent gunning, playing ball and entertaining fast girls. Double Star, I will leave you to name them. Would your advice be to let the boys go to such places? If so, why not let the girls? Or why not the parents take them as if they were going to church? I would rather let my children go to church alone than go alone to ball games. Our boys' parents have never read a dime novel that I know of and I know the children haven't. Their companionship in books can be controlled. We are proud of their intel-

ligence, ambition and innocence and are trying to keep them worthy until their habits are formed. Farmer boys need recreation or a change on Sunday, but not harder work. Many thanks for the beautiful suggestions on church going. They are what parents ought to practice.

I have been reading Among Ourselves for some time with quite a degree of interest. Although there is quite often something said that crosses my ideas, this is what gives me food for thought. In reading what Aunt Jane has to say in regard to keeping the Sabbath, I find quite a bit that is true; still I think she is upholding something that will lower the moral standard of our boys, instead of raising it. I think the place for a Christian man or woman at the hour of service on the Sabbath day is at church (with their family if they have one) where they may receive inspiring thoughts that will make them better men and women. It is true the chores must be done on the Sabbath day, but the feed hauling and such work arranged so a man can go to church if he really desires to. You cannot successfully send your boys and girls to church. You must take them (or rather go with them) if you expect them to be there regularly. This is the best way I know of raising the moral standard of our boys.

Odd as it may seem there are a number of "best ways" of "raising the moral standard of our boys." Church attendance by parents must be accompanied by the practice of the virtues there inculcated or it is not likely to accomplish much in the way of influencing either boys or girls to noble living; on the other hand parents who live sweet home lives, who surround their children by healthful influences and seek to lead their young feet in the paths of righteousness need the strength which may be gained in the house of God.

One of the most beautiful things in the world is the desire of parents to bring up their children wisely. It is one of the special aims of this Home Department to foster this parental longing and it is one of my greatest pleasures to present to this circle fathers and mothers who are willing to share experiences which are likely to be helpful to others. Two such are with us, An Among Ourselves Mother and an Iowa Reader:

I must tell the young mothers how I learned my best lesson. "I had three little children and was at my own dear mother's house visiting and a dear old lady friend came in to see me. I thought my children would annoy her, so I said, "Oh, grandma, don't you think I have three noisy little children?" and I said I got so worried with them I almost went crazy sometimes (and I did think I had my hands full of trouble). But she turned to me and said, "Hush up; those are the sweetest children I ever saw play together; they never whine nor quarrel at each other, and that is as lovely a thing as I want to see." She said, "You are seeing your best days with them now around your feet in your way, playing and not quarreling. After while they will quarrel

and fight and cause you all kinds of heart-aches. You will find out what I say is true." Well, dear young mothers, I thought about what she said and I said to myself, if I just let them know I won't let them quarrel that will be my best way to stop it, and I have done this. When any little disagreement comes up at the house or barn I am never too busy at work to stop it. And I tell you it works like a charm. Now I have eight dear children and every one loves mother dearer than self. This I know by kind words, willing hands and good deeds done for me. So, dear young mothers, instead of whipping baby and telling her she is a bad girl, try to start right from the first and see how much better it is. That dear old lady's lesson was worth a thousand dollars to me, for now three of my children are nearly young folks and when I think of the trial it is to let them start out to face the sinful temptations there is now for boys and girls, I see how true her words are. My boys are sixteen and seventeen, and have lots of invitations to parties and other places of pleasure, but they always say, "Mother, shall we go?" If I say, "I don't believe I would," that ends it.

Mothers, teach your daughters to take care of themselves physically, as well as morally. Just yesterday I stood by the grave of a young wife, a dear friend of mine, and how sad it seemed to me to see one so young and beautiful taken from this world of usefulness, leaving behind parents, brothers, sisters, a loving husband and two little ones, when care of herself in past years would have averted the sickness and spared her life to those who loved her so dearly.

It ought to be worth a great deal, especially to young parents, to hear words like these. As a matter of fact, because of the many grateful words which reach me, I know that it is. Those who aid in making the circle the power for good which it is, may lay the flattering unction to their soul that they are doing a splendid work when they take time to pen a good letter for Among Ourselves.

An Old Maid, who ought to be making some good man a nice wife, has a word for us today. By the way, will some one tell us why it is that so many of the very finest women are unmarried? There must be some reason for it; it would be interesting to hear what the circle thinks it is:

Hurrah for the Illinois Bachelor! How could you keep still so long, when so many had wrongly interpreted your remark on kissing? I am glad you came back the second time, for we thought you just like most other boys and men, but are glad to know you are among the few who stand for "one standard for both sexes." I have a recipe for June Bug, and I think if she will carefully use it it will be beneficial to her. It is an old and tried recipe, which I believe every good wife uses at least a part of. After trying this for a spell, will June Bug kindly give us an account of the experiment? I hope she will be successful, but the best of cooks fail sometimes. Here it is: "Cooking a Husband.—A great many husbands are utterly spoiled by mismanagement in cooking, and are not tender nor good. Some proceed as if their husbands were balloons, and so blow them up; others keep them constantly in hot water; and still others let them freeze by their indifference and neglect. Some keep 'hem' in a stew all their

lives by irritating ways and words. Others roast them. Some keep them in a pickle. It cannot be supposed that any husband will be tender and good when managed in this way; but they are delicious when properly treated. In selecting your husband you should not be guided by the silvery appearance, as in trying mackerel; nor by the golden tint, as in salmon. Be sure you select him yourself, as tastes differ. Do not go to the market for him, as the best are always brought to the door. It is far better to have none unless you will patiently learn how to prepare him. A preserving kettle of the finest porcelain is best, but if you have nothing but an earthen pipkin it will do, with care. See that the linen in which you wrap him is nicely washed, neatly mended, and with the required number of buttons and strings. Tie him in the kettle with a strong silken cord called 'comfort,' as the one called 'duty' is apt to be weak. He is liable to fly out of the kettle and be burned and crusty, on the edges, since like crabs and lobsters, you have to cook 'em alive. Make a clear, steady fire out of love, neatness and cheerfulness. Set him as near this as seems to agree with him. If he sputter and fizz do not be anxious; some do this until they are quite done. Add a little sugar in the form of confections called kisses, but no vinegar or pepper on any account. A little spice is good, but it must be used with judgment. Do not test him with any sharp instrument to see if he is browning tender. Stir him gently and you cannot fail to know when he is done. If thus treated you will find him very digestible, agreeing with you nicely, and he will keep as long as wanted, unless you become careless and set him in too cold a place."

There is a saying that it is a poor rule which will not work both ways. Like so many of the old proverbs this one is slightly enigmatical, but I think it may be applied here to mean that this recipe will also apply to the preserving of a wife. With this thought I recommend it to men as well as women who have taken partners. Wives need to be "cooked" quite as much as do husbands, although some husbands who expect the attention seem to be oblivious of the fact.

"One of the Girls" comes as a spokeswoman for her sex in reply to a question asked at a recent meeting:

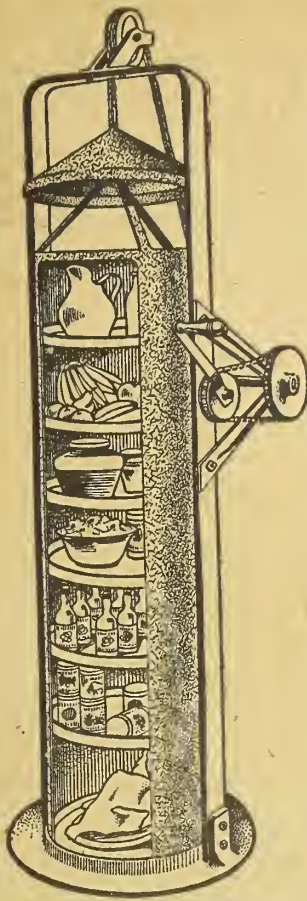

I see that "A Crank" and our editor both accuse us of encouraging the attentions of undesirable young men, and we will have to admit that their accusations are to a certain extent just; the description they give well befits a certain class of girls. But, Mr. Crank, as you imply that there is a difference in men, let me say that there is also a difference in girls. Let us first note the girls who, you say, congregate on the street corners and talk about "that handsome young fellow until the next one passes." That talk alone is a strong pointer of character. Do you admire the class of boys and men who gather on the street corners and discuss the "pretty girls" that pass? Is such a practice more worthy when indulged in by girls than when followed by men? Now, many of these girls are really good at heart, but are either ignorant, thoughtless or silly. They like to make a nice appearance themselves and wish their companions also to be stylishly dressed. Their ambitions and ideals reach no higher than this, or if they do, they have not the courage of their convictions. Nor are the girls wholly to blame. Many of them have been taught, almost from babyhood, that their chief care should be to have a "fellow" with little or nothing ever said as to morals or character. They begin receiving attentions from the young men when only fourteen or fifteen years old, some younger even than this; most of them far too young to think very deeply for themselves. As they grow older, many of them still do not realize that to wear the most fashionably-cut suit is not the best recommendation that a man should offer. Often they snub a really noble, but perhaps somewhat old-fashioned man, merely because they are too shallow minded to appreciate his true worth. But please do not think all girls belong to this class. I know several who require not fashionably-cut garments, but pure, true manhood as a title to esteem. However, you need not expect to find these on the street corners talking about the "handsome young men" who pass. They are at home helping mother, or in some of our churches or Sunday Schools; somewhere that they are needed, and are doing something worth while.

Good, sound sense marks the words of this girl of ours; is it not a pity that girls such as she should so often be passed over for some showy, flighty miss? If things could be so arranged that like would mate with like—the pure, strong man with the modest, sweet girl, and the gay, wild fellow with the silly butterfly—I wonder if it would be any improvement. What do the friends think?

Next week we shall have some replies to the call for definition of love. I hope we shall hear from a considerable number on this point, as the matter is a most vital one and yet one upon which there is little sane thinking done.

A few words on amusements by R. Thomas and the meeting will stand adjourned:

Being a reader of the circle I feel constrained to write my views concerning various amusements, such as dancing, card playing and theater going, Mr. Robert J. having invited the discussion. If one is little of form and figure, or fat and forty for that matter, and enjoys the sweet strains of music, I see no harm in "tripping the light fantastic toe" to an old Virginia reel or to the latest schottish or waltz. There is merriment in our makeup, put there by our

## Try This Iceless Refrigerator For 30 days FREE

The Galesburg Iceless Refrigerator beats anything ever brought out. The Galesburg will save you money every minute, every hour, every day. To prove this to your own satisfaction we will ship you a Galesburg Iceless Refrigerator to try in your own home for 30 days free.

With the Galesburg Iceless Refrigerator you can keep Meat, Milk, Butter, etc., in a perfect manner without ice or one cent of expense after the first cost of the refrigerator. It will pay for itself in one season by the foodstuffs it saves and everything will be wholesome and fresh.

Besides, it's convenient. You can put the

## Galesburg Iceless Refrigerator

on the porch or near the back door close to the kitchen—anywhere in fact. A child can work it.

The Galesburg is made of strong galvanized steel, being provided with movable shelves or trays. It is made to last a lifetime; it's the Farmer's Icebox—the friend of the Farmer, of his wife and of every member of his family.

Every Farmer's Wife should read our interesting book, "Keeping Food on the Farm."

Send for it today. It's free.

ST. PAUL, MINN.

Creator, without which a more pessimistic individual cannot be imagined. If mirth be in you, give it vent through whatever gifts you may possess. If there be a fondness for music, time and rhythm, join in the dance with a view to getting all the fun out of it you can. To be called a graceful dancer, a pretty dancer, is something of a compliment, and if one has ambition it gives an opportunity to excel in the art. It is also an exercise conducive to health when not carried to excess. I place card playing on a similar basis. People give parties that they—both old and young—may have a good time, socially speaking; that they may have a diversion from the hum-drum of their business. There are persons whose forte is cards and if the hostess should offer a prize for the best player at high-five, euchre, or seven-up, so much the better interest is manifested in the game. There are others who would prefer taking a hand with the boys and girls in playing needle's eye or such other kissing games, which is all right. Someone has said, "Variety is the spice of life," so let there be a good time. As to theater going, I approve of it, too, provided the play is on instructive lines. This should be determined from persons who know or by reading up for yourself. I wish to be understood that I would not have members of the church to dance; not that it is any more harm for them to dance than anyone else, but that they in so doing overstep the bounds of church discipline. "Be ye temperate in all things," even unto amusements, as well as to drinking or eating, is a scriptural injunction. So I fear nothing from this source in the event Mr. Robert J. springs the Bible on me to disprove my position.

During the years in which I have presided over this home there has been no more welcome visitor than Mrs. Frances Vanderhoef, of White Rock, S. D. Mrs. Vanderhoef has always brought us a word of good cheer, sound sense and helpfulness. It is but natural and right that she should receive warm greetings, have warm friends in this circle. Word has just come to me that Mrs. Vanderhoef is in sore trouble. Her husband, her beloved companion for many years, died suddenly in a hospital after word had been received that he was making a good recovery from the operation which necessitated his being there. The shock of her loved one's death was terrible to our friend. Her grief and her loneliness make a claim which will, I trust, appeal to very many of her friends. Let us make it a point, however busy we may be, to write a word of sympathy within the next week or two to our bereaved friend. Let us do what we may

to comfort her and show her that newspaper friends are worth having.

Dressmaking and Millinery, No. 566.

Sylvia Silverthorne, Muscatine, Iowa. [All inquiries and remittances for patterns described in these articles should be addressed to Sylvia Silverthorne, Muscatine, Iowa, and not to the office of this paper nor to the editor of the Home Department.] Each season has its especial fad or fads, and while we may smile at these in our "superior" way when they are first introduced, there comes a time when we fall in line and adopt whatever fashion dictates. At the moment the kimono sleeve is the conspicuous feature of many of the waist garments, and its adoption is being carried to the usual extreme, but since it figures most largely in the fancy waist or jacket it may

(5623 Over Blouse or Jumper, 32 to 40 Bust.)

run the season without tiring of it. I would not like to prophesy that it could hold favor for every-day wear.

As an illustration of the kimono sleeve I am showing with this number the over blouse or jumper No. 5623 which has this feature, and if you will read carefully I will try to make it plain to you how you may modify garments that you have on hand to give

It's not fair to your lamp to dwarf its light with a poor chimney. I manufacture lamp-chimneys that get the most out of lamp-light, and that won't break from heat.

I put MACBETH on every one, because it tells you how to get the best in lamp-chimneys.

My Index tells about these facts, and tells how to get the right size chimney for your lamp. It's free—let me send it to you.

Address, MACBETH, Pittsburgh.

them this effect, for the idea may be made very useful in remodeling. In the illustration the blouse is made in one piece, there being under-arm seams only. None on the shoulders. You see then what a simple little affair the garment becomes. There are tucks on the shoulders that extend to yoke depth at front and back. The waist is cut in a deep point at front and back, or it may be cut in varied form, as indicated. It is to be worn over a guimpe (the guimpe is not included in the pattern) and the one illustrated is made of lace all over. Any simple waist pattern may be used as guimpe pattern. If the overwaist is of the material like the skirt a pretty feature and one of the newest is to have the sleeves of the suiting, then only the chemisette is of the lace. It will be necessary, however, to sew the sleeves into the guimpe, as the shape of the kimono or "Mandarin" sleeves does not permit the setting in of the ordinary sleeve. If you want to give the effect of the kimono sleeve

(5577 Blouse or Shirt Waist. 5135 Seven Gored Skirt.)

to an ordinary waist you can do so by using straight bands of the material, or of embroidery, arranging these across the shoulder and terminating them well below the arm hole, where the ends are joined in a seam. The garment is adjusted as shown by means of a tape inserted across the back and tied at front over the waist. Pattern No. 5623 is cut in sizes for a 32, 34, 36, 38 and 40 inch bust measure. Give size when ordering pattern.

The shirt waist costume shown is made up of two numbers and these are, of course, separate patterns. No. 5577 is a yoke shirt waist, the yoke being in a somewhat novel design, and one that permits modifications in the way of trimmings. Pippings, bandings and frills all offer modes of decoration, and the new frillings may be applied in the ways suggested in former hints, so that the garment may be developed into something very dressy, or for something simple it may be stitched and trimmed with pearl buttons as in the illustration. Embroidery done on yoke, cuffs and front pleat will give very pleasing results. Pattern No. 5577 is cut in sizes for a 32, 34, 36, 38, 40 and 42 inch bust measure. Give size when ordering pattern.

No. 5135, seven-gored skirt, needs little description, as it is simply one of the pleated models having two backward turning pleats on each gore. The plain spaces on each gore afford opportunity for any mode of decoration, embroidery, braiding, applied bandings, all being in vogue and by means of either panel effects may be given. Pattern No. 5135 is cut in sizes for a 22, 24, 26, 28 and 30 inch waist measure. Give size when ordering pattern.

Send eleven cents in money (not stamps) for any pattern wanted, these or others. Address all orders to Sylvia Silverthorne, Muscatine, Iowa.

## THIS BOOK FREE

Write today for work by several well known agricultural authorities, showing why the Harrow is much more important than the plow. Also illustrates and describes

### THE ACME HARROW

The riding harrow that cuts and pulverizes the plowed ground. Coulters or teeth work as a gang plow. The only harrow built on correct principles.

Sent Free on Trial.

Ask your dealer to let you see the Acme Harrow. If he hasn't it I will send you one for free trial. No expense to you. Don't forget to write for book.

#### Joseph Faithful in Prison.

"The iron crown of suffering precedes the golden crown of glory."—F. B. Meyer.

The fascination in this four-thousand-year-old story is, that it is a study in life. It is not a middle age piece of scholasticism, but a warm-blooded history of human nature; not a dissertation on metaphysical generalities, but a tale of human emotions, as they are felt today, and every day, and everywhere. It is the "proper study of mankind." It concerns Man, and is consequently universally interesting. The effort to retell the story is futile. To reclothe it is to do violence to it. Its own dress is its only dress. Its simplicity, genuineness, fidelity, make it a masterpiece of literature. As in a microcosm, one sees here the evolution of a man and a statesman. The circumstances which seem to retard really accelerate the process. Joseph had learned how to "take honey out of the eater"—one of the finest and most useful arts of life. As a slave, he made himself indispensable to his master. Two thousand years before St. Paul, he lived the apostle's maxim. He served not as a "man-pleaser, but as unto the Lord." A quaint version describes him as a "lucky fellow." But even his heathen master could discern the Divine accompaniment to his human thrift and industry, and acknowledged that "the Lord made all he did to prosper in his hand." Yet all the while there was the poignant sense of humiliation. The heir of a prince must needs wear the brand of a slave. His hard lot, however, could not make a pessimist or misanthrope of him. His engaging qualities were unclouded. Unconsciously, he was schooling for the premiership. Faithful in few things, he was to be lord of many. His very attachment to Potiphar, chief captain of the royal guard, and keeper of the royal prison, made him conversant with affairs and men and methods of state, invaluable to him in his after career.

The next incident seemed to plunge Joseph in irretrievable ruin. An Oriental prison is a descent to hell, which may be well inscribed, "Leave all hope behind who enter here." The account is perfectly faithful to Oriental judicial processes, in that it makes no allusion to a trial. There was none. Accusation was sufficient. Nor is there any reference to the term for which Joseph was committed. It was indefinite. It was the pleasure of Potiphar. Had the latter passed from the scene, a new commander of its prison would have found no record in Joseph's case, and he might have languished for a lifetime. Yet, even in prison, Joseph was still the "lucky man" the Bishop's Bible calls him. For, in the shortest space of time, the prisoner was the prison-keeper; and whatever was done there, he did it, and it prospered. All things kept working together for good to Joseph—his brothers' malignant jealousy; his transformation into a slave; his exile from his native land; the foul and false accusation; his imprisonment—as man seeth, each was a step in the devious inferno; as God seeth, and as man saw afterward each was a step in a staircase leading to a throne and a coronation; a new tribulation deep the way to glory is. Yet all turned on the character of Joseph. A meretricious and evanescent promotion might have come to him even had he been insincere and corrupt at heart. But a permanent exaltation in the hearts of his own and his adopted countrymen; an assured position among the immortal worthies in the kingdom and patience of God—a good life only can win that distinction.

#### Analysis and Key.

1. A study of life. The charm and value of an old story.
2. Evolution of a man and a statesman. What apparently retards really accelerates. The art of taking honey out of the eater. Joseph knew and practiced it. Unconscious schooling for premiership.

3. Joseph's apparent irretrievable ruin. Accusation. Imprisonment.
4. Joseph's "luck" outcome of character.
5. Permanent exaltation only won by a good life.

#### The Teacher's Lantern.

It was the contention of the late John Fisk that evil must needs be present; that morality comes upon the scene when there is an alternative offered of living better lives or worse lives; that the action of the ideal man is to be determined not by the pursuit of pleasure and the avoidance of pain, but by the pursuit of goodness and the avoidance of evil.

But Joseph, four thousand years ago, splendidly realized Mr. Fisk's ideal. In Egypt, the home of unchastity (marital), where marriage infidelity was prevalent (Herodotus), under the most seductive and persistent solicitation, he kept himself pure. Joseph shines brilliantly as an ancient example of chastity. The example is inspirational for young men of today.

John Ruskin makes a fine discrimination, and a helpful one, in this connection, when he says, depreciating his own "bringing up," that he was innocent "by protection rather than virtuous by choice." "Innocence by protection" is a feeble thing, apt to be surprised and taken by guile; and protection, at best, can only be approximate.

"Virtue by choice," like that of Joseph, is the ever-accumulating virile force that makes for right living. The deliberate, intelligent, free, continuous preference of the good, the true, the beautiful, is the charm and wisdom of saintliness. The very constitution of the world, natural and social, is designated to afford opportunities for such preferences.

Mr. Fisk affirms that though, in the process of spiritual evolution, evil must needs be present, the nature of evolution also requires that it shall be evanescent. "From the general analogies furnished in the process of evolution, we are entitled to hope that, as it approaches its goal, and man comes nearer to God, the fact of evil will lapse into a mere memory, in which the shadowed past shall serve as a background for the realized glory of the present."

Joseph's clothes kept getting him into trouble, though he was in no way responsible. First, it was his coat of many colors, with which his father had invested him, perhaps, in token that he was to have the rights of primogeniture. Sight of it enraged his brothers. Now, it was the cloak he left in the clutch of an adulterous woman, and which her illicit love turned to deadly hate, she could use as evidence against him. People's clothes are still getting them into trouble, and with more reason.

"Remember me when it shall be well with thee." That smacks of worldly wisdom. But it may be in appearance only. To avail one's self of legitimate human means does not necessarily signify at all that one has abandoned his trust in God. However, the butler forgot.

Enslaved at seventeen; a slave ten years; a prisoner three years; prime minister at thirty—that is Joseph's history in a nutshell. The scene of it, probably Heliopolis, near the modern Cairo.

Joseph's victory shows how a man, especially a young man, is to overcome temptation. The first requirement is, Walk as in the all-seeing presence of God; the second, Fight with the weapons of the Word, in the light of duty; the third, Avoid the occasions of sin; the fourth, Firmness above all things; and, if it must be, flight, with loss of the good name, and even of life itself. (Lange.) Such flight is more honorable than the most heroic deed. (Calwer.) The fear of God is the best means of grace for avoiding sin and shame. (Lange.) In a temptation to adultery or fornication, flight becomes the most pressing necessity. (Ibid.) Joseph lets his mantle go, but holds on to a good conscience. (Krummacher.)

The paradoxes of Joseph: A slave, yet a freeman; unfortunate, yet the child of

## GOOD HARNESS

HOW YOU CAN BUY A FINE \$25 SET DIRECT FROM THE MAKER FOR \$24.

ALL SHIPMENTS ON APPROVAL.

I make all my harness in my own factory right here in Waterloo. I buy all the leather and supplies so I know that nothing but genuine oak-tanned leather is used. I know all my men and every last one of them is a skilled harness maker. My expenses here are low—not one-fifth of what they would be in a large city where most of the harness sold by mail-order houses and local dealers is made.

When you buy from me you deal direct with the maker and that means a mighty big saving.

You take no risk either. All goods shipped on approval and if not entirely satisfactory you send them back and get your money and we pay charges both ways. As to our responsibility you can refer to any bank or express company in Waterloo or you can look us up in Dun or Bradstreet.

The harness shown in the cut here is our "leader" for 1907. It's a genuine bargain—a splendidly made 14-in. team harness—all of the best grade oak-tanned leather. Just send me the money and the harness will go to you at once with the distinct understanding that I will refund the price and pay charges both ways, if you are not perfectly satisfied.

My big, free Harness Book is full of money-saving offers. Send for it and compare our prices, styles and qualities with what your dealer offers. Write me today. Address R. M. Knox, Pres., Western Harness & Supply Company, 613 Main St., Waterloo, Iowa.

### FOR SALE.

THIS machinery is good as new. Will sell for half its cost when new. Will sell for cash, or write what you have to trade.

W. R. HAINLINE.

Blandinsville, Illinois

fortune; forlorn, yet still in the presence of God; object of impending wrath, yet preserved alive; a prisoner, yet a prison-keeper; every way subdued, yet superior to his condition; his misfortune his fortune; his fortune his misfortune.

#### A UNIQUE CALENDAR.

We have just received from Clay, Robinson & Co., the well-known live stock commission firm, an unusually attractive and interesting calendar typifying the "Evolution of the Range" or, in other words, the development of the cattle industry in the West. It consists of four sheets on each of which appears a handsome western picture. The dates run one year from April, 1907. Any of our readers who ship at least one car of cattle, sheep, or hogs per year can have one of these calendars free by addressing Clay, Robinson & Co., Union Stock Yards, Chicago, Ill.

## DAY BY DAY

Agricola

When ye see a cloud rise up out of the west, straightway ye say, there cometh a shower, and so it is; and when ye see the south wind blow ye say, there will be heat, and it cometh to pass.

From the above we learn that short on weather predictions came true in Palestine long before telegraphs, barometers, wet bulb thermometers, etc., were known.

But nothing was said in this connection, (read Matthew and Luke) as to cold waves from Dakota and Medicine Hat, and they are to be reckoned with in the corn belt.

Our big storms also come from the south, instead of the west. The Mediterranean sea filled the west winds with vapor which were condensed and precipitated over Palestine, but it is the Gulf of Mexico which waters the Mississippi valley.

And here is a fact which staggered many the first time it was forced upon their attention: The wind may not be blowing from the south where the rain is falling, but from the northeast. When it is raining in Kansas City, with a northeast wind blowing, look out for the storm to reach Des Moines some hours later. The storm is moving northward.

or towards the northeast, but the wind has a rotary motion, with the north-west part of the circle dry, the other parts wet.

Local showers may come from the west, due to local causes, but the wide and general watering of the corn belt is done by the Gulf of Mexico, even though the whirling wind blow locally, while it rains, from an opposite direction.

But the trouble in this locality this spring has been that the wind has been almost constantly from the north and northwest. A wind from that direction is always dry here, for it is cold and it becomes warmer in its passage south, and consequently no moisture is squeezed out.

And right here comes speculation of another sort. What will be the effect of this dry, cold weather upon this year's crops?

Pastures need warmth and moisture early in the season in order to be early pastures, and the longer this condition is delayed the poorer the pasture is apt to be throughout all the year, as stock will eat it down too short, the leaf growth which is necessary to enable root growth is prevented, and the grass will be short and puny all the year. For this reason let us devoutly hope that warmth and moisture may not be delayed much longer. Here's hoping the weather will change before this is printed.

There is this to be thankful for: so long as it is cold it is well that it is dry, otherwise the seed grain would rot in the ground.

I find that my clover of last spring's seeding is all right this spring. It is growing, too, in spite of adverse weather. The old pasture which was so good as to yield a ton and a half of hay per acre besides affording feed for a full average supply of stock, has made no growth to be proud of, and it will be turned into a corn field and the new seeding will be the new pasture. But it will be allowed a good start before stock is turned in, and stock will be kept out after soaking rains, so the ground will not be punched full of holes.

Harrow carts are becoming quite common. The farmer who walks after the harrow feels a little contempt for an able bodied man who will not walk with the lines to help him along, but asks the horses to not only pull the harrow but also draw him. The answer is, and it may be a full answer or not according to conditions, that with the present scarcity of help the farmer must keep himself fresh so he can do more choring and do it better and quicker. This he must do when the horses have finished their day's work and are resting. He must rest while they work and work while they rest.

Milk-selling impoverishes the farm, but butter-selling does not. Nitrogen leaves with the milk; there is none, practically, in butter. The lesson from this is that the land from which milk is sold must be fertilized.

There may not be any royal road to phenomenal success in stock raising, and he who beats all others may "get there" by virtue of a native knack, but for a free and easy way to winter heifer calves I know nothing easier and simpler than to feed them sheaf oats. This proven-der furnishes both forage and grain, and the balance is good, both as to proportion of bulky food to concentrated, and also regarding the protein content.

Agricola has some heifers to show as living evidence of the success of this method.

Farm separators must not be left uncovered in a dusty place. Nor must they be run even for one minute "dry." Oil before starting, sure.

Man was made to mourn and woman to—well, woman is a conundrum which is unguessable and unsolvable, but "we will never give her up."

The school boy who milks cows every night and morning is the better for it. Such a gymnasium is good for the boy and helps keep a sound mind in a sound body.

Have you any second crop clover hay? It is good feed for poultry. And this

holds true for all kinds of young stock and dairy cows.

Disking timothy meadows this spring is right or wrong. If you wish to kill the timothy and get the meadow into clover it is the way to do it. If you wish to keep the timothy alive, disk is rough treatment.

Little pigs would make splendid pets for the fashionable homes (?) of the 400 where babies are prohibited. The work of carrying a pig, three months old, in their arms might seem a little fierce to some of the ladies, but they would have the satisfaction of having a pet that is many times handsomer than a bull pup.

It is a great deal better to disk ten acres per day and do good work than to skim over twenty acres in a day and spend the next day bragging about it.

401-Union Building, -- Des Moines, Ia.

ation hollow and disk howl on the market. The cream is smoother and more churnable. The "Peerless" has a greater capacity for the size of the bowl. In a test made by a farmer in eastern Iowa, where he run night and morning milk through the "Peerless," 754-pound, he got seventy-nine pounds of cream, which tested 36½ per cent. The next day he tried what is considered one of the old standard machines; he run 771 pounds of milk through and got 73 pounds of cream that tested 35½ per cent. Figure it up at the present price and you will see that the

"Peerless" is saving him about \$1 a day. How many farmers can afford to lose \$1 a day. Buy the up-to-date "Peerless" and save it all. Send for catalog No. 14 and prices. Manufactured by Waterloo Cream Separator Co., Waterloo, Iowa.

DR. STOCKDALE, A SPECIALIST.

We wish to call the attention of our readers to the advertisement of Dr. Stockdale, which appears on this page of The Homestead. The doctor makes a specialty of treating certain chronic diseases by mail, and has had phenomenal success. He is not a young man, but a man who has profited by years of experience in this line. Dr. Stockdale is a competent and conscientious physician who gives his personal attention to all patients. He has a perfect system of correspondence, and his own special symptom blanks, which enable him to diagnose and treat successfully those who cannot call at his office to see him. If you are suffering from any chronic disease, we would suggest that you write and get the opinion of Dr. Stockdale.

## FREE TO MEN

Sent Positively Without Cost.

This is a bona fide offer to any man suffering from any of the diseases peculiar to men and is made by Dr. Rankin to give every man an opportunity to test, without cost, his superior and original methods. **One Week FREE Treatment**

If you need medical advice, why not get the best? This one week's treatment, absolutely free, will convince you.

Dr. W.D. Rankin, Dept. 18, 136 W. 34th St., New York.

## Traction Engines For Sale.

We have on hand ready for delivery several 15 Horse-power Traction Engines, new and second hand, also one 8-horse-power Traction Engine second hand, that we will sell very cheap in order to close them out within the next few months. A great opportunity to buy a good engine at practically cost price.

THE O. S. KELLY MFG. CO.,

IOWA CITY, IOWA.

## SHEEP.

## CLOVER HILL SHROPSHIRE

IN favor everywhere because of their good size, strong constitution and true type. We now offer a strong, growthy lot of rams and ewes, coming yearlings, sired by 275 to 305-lb. champions of England and America. Will import this summer, as usual, from England and Scotland and will execute orders for show or breeding sheep on a very low commission. If wanting home bred or imported, few or many, our offers merit your consideration.

CHANDLER BROS., Chariton, Iowa

## More Money For Wool.

SELL your wool where prices are highest. Ship direct and save middle profits. Small lots same price as large lots. Prices and full information free. MYERS-BOYD COMMISSION CO., ST. LOUIS, MO.

## Allen's Shropshire Rams and Short-horn Bulls

I HAVE a bunch of very fine rams for sale, suitable to head the choicest herds; also 15 young Scotch bulls from 10 to 15 months old.

## 2,000 HIGH GRADE ANGORA WETHERS.

One and Two Years Old. THESE goats can be used for brushing and then fed and sold for mutton. Come and see me or write. Address, WYATT CARR, Collins, Iowa. Farm 3-4 ml. from depot. Phone 44

## ADVERTISING NOTES.

Three hundred thousand red cedar trees are offered for sale by Messrs. Garland & Fowler, of Afton, Iowa.

Northern grown seed corn, seven varieties, and sold under the Holden test, is offered for sale by the Gateway Nursery Company, of Le Mars, Iowa.

The Anchor Fence & Mfg. Co., of Cleveland, Ohio, advertise a woven fence which is claimed to stand up well and can be put up by anyone. Send for their free fence book No. 12 which tells all about their fences. See page 14.

Why not investigate Colorado lands in the "Sunny Sau Luis Valley" of that state. It is a land of good things for the farmer and stockman, also the investor. Write Mr. C. B. West, Alamosa, Colo., for free booklet, mentioning this paper.

The Kemper Disk Furrow Opener, manufactured by the Walker Manufacturing Company, of Council Bluffs, Iowa, will increase the yield of corn, cane or cotton at least 25 per cent. Write for free illustrated circular which tells you all about it.

For Canada wheat lands in Paradise Valley, northern Alberta, one of the finest farming countries in the world, write for maps and descriptions to Mr. W. T. Stevens, 214 Endicott Bldg., St. Paul, Minn. Kindly say that you saw this offer in The Homestead. See page 19.

Virginia offers great opportunities to the homeseeker. The climate is mild and healthy, the soil is rich and a little money will go a long way in purchasing improved lands. For further information write to Messrs. C. M. Berg's Sons & Gaeb, of Richmond, Va., mentioning The Homestead. See page 19.

Gade Brothers Mfg. Co., Iowa Falls, Iowa, are advertising a fine line of air-cooled gasoline engines. They can supply you with different horse power. The advantages of cooling the gasoline cylinder with air are well set forth in their catalog which they send for the asking if you mention this paper. See page 3 for their advertisement.

The most timid lady driver can handle a driving horse perfectly under the most trying conditions if the bridle is equipped with the Beery bit control. Your dealer should have them in stock. However, should this not be the case write direct to the inventor, Prof. J. A. Beery, Pleasantville, Ohio, mentioning The Homestead. See page 5.

A pine needle pillow is advertised on page 20. This pillow will give a room a most delightful pine tree fragrance that will last indefinitely. Only those who have grown to enjoy the fragrance of pine needles will appreciate this offer. Send fifty cents to C. F. Merriam, Eureka Springs, Arkansas, and the pillow will be shipped. Remember to mention this paper.

Among the commission firms which are out for wool is the Myers-Boyd Commission Company, of St. Louis, Mo. Wool shippers of the Southwest or any portion of the corn belt will do well to write for prices and information regarding shipments. This firm handle small and large shipments with the same care. Address them as above, mentioning The Homestead.

Floyd county, Iowa, contains some of the finest and richest land of the corn belt. Farms in this county are now being offered for sale at prices ranging from \$55 to \$90 per acre. Choice South Dakota lands are also listed. For prices, terms or further information write Land Dept., Farmers and Merchants Bank, Floyd, Iowa. See page 19 and mention this paper when you write.

## FIVE TO EIGHTEEN BUSHELS CORN TO ACRE

would be a small crop indeed, but when this amount is the increase over the ordinary crop secured by the use of the Morecorn Sorter and Grader the proposition is worth considering, is it not? The Morecorn Sorter sorts seed corn for length, width and thickness. It is claimed that as small a difference as one-thirty-second of an inch will differentiate between the grades of corn which it sorts. This sorter is inexpensive and is made to last, with proper care, indefinitely. Literature explaining fully the sorter and the good results which is accomplished will be sent to anyone writing to the

Monarch Self Feeder Company, 95 Main St., Cedar Falls, Iowa. When you write please mention The Homestead.

## THE HURST POTATO SPRAYER

Sprays not only potatoes, but trees, garden truck and any other small crop. It is guaranteed for five years and is sold at wholesale prices. Agents are wanted. Write for spraying guide and full information to M. L. Hurst Mfg. Co., 86 North St., Canton Ohio.

## A FRANKLIN COUNTY FARM.

Mr. C. W. Soesbe, of Greene, Iowa, is offering a 240-acre farm in Franklin county, Iowa, at a big sacrifice. Mr. Soesbe is a well-posted man on farms, and if he pronounces this farm a bargain at the price he asks for it, it will be well worth your time to investigate. The farm is well improved, has good soil, near good market center, in fact, it is one of the best farms in the county. Write Mr. Soesbe and mention The Homestead.

## EARLY SEED CORN.

Under the above head readers will find the advertisement of several varieties of eighty-day corn which should be especially adaptable to the northern part of the corn belt. This corn has been tested and will be priced reasonably to buyers. As this is the last time this advertisement will appear we would advise you to put a pin in it and write to Ratekin's Seed House, Shenandoah, Iowa, for prices, mentioning The Homestead. See page 10 for advertisement.

## IT SAVES TIME.

The combined riveting and stitching tool advertised on page 9 will save a good many hours of time in mending up rips and tears on the harness. This little tool is made for the use of the farmer or horseman, and an amateur with it can do very neat work. Agents are wanted to sell this machine in every community. If you are interested write to the J. B. Foote Foundry Company, Dept. 433, Fredericktown, Ohio, stating that you saw their advertisement in The Homestead.

## GET A FREE TICKET.

This is a hard thing to do since the anti-pass laws went into effect, but Messrs. Gillilan Bros., 555 Temple Court, Minneapolis, Minn., will tell you how to get one to go and see their bargains in farms in Minnesota, North Dakota or Canada. They are in a position to show you some exceptionally good bargains in farms, some of which can be purchased on the crop payment plan. See their advertisement on page 19 of this issue of The Homestead and mention this paper when you write.

## A PERFECT SEED BED.

Under the above caption Duane H. Nash, Box 44, Millington, N. J., has edited a book which should be in the hands of every thoughtful grain grower. Besides containing articles by well-known agricultural authorities on timely topics, it illustrates and describes the Acme Harrow. This harrow cuts and pulverizes plowed ground, putting it in the best of condition for a perfect seed bed. Ask your dealer to show you the Acme Harrow. If he hasn't one in stock write direct to Mr. Nash, addressing as above.

## A FINE STOCK RANCH FOR SALE.

The Mylander Ranch of 1,550 acres, considered one of the finest ranches in Nebraska, is offered for sale by Messrs. Buchanan & Patterson, of North Platte, Neb. It is a great alfalfa ranch, fenced and cross fenced, with a complete water plant, wind mills, etc.; plenty of timber, 120 acres of tillable corn land, with hundreds of acres that will make the best corn and alfalfa land. The improvements are first class in every particular. If taken soon will be sold for \$20 per acre, and will double in price in two years. Here is a great bargain for someone who cares to invest. When writing kindly mention The Homestead.

## "GOPHER DEATH."

The time to rid your place of ground squirrels and all kinds of gophers, prairie dogs and other rodents is in the early spring. A package of "Gopher Death," 1,400 prepared tablets for \$1.25 does the work to perfection. The Ft. Dodge Chemical Company, of Ft. Dodge, Iowa, manufactures Gopher Death, and will be pleased to send every reader of this paper a free illustrated circular, telling all about the habits of gophers, ground squirrels and other rodents. We can

## HUNDREDS OF MEN

Have Taken Our Advice and Treatment.

Now They are Strong and Vigorous

Rich men, poor men, men in every walk of life from bankers to laborers, have during the many years we have practiced been cured of various Diseases, such as Blood Poison, Nervous Weakness, Weakened Vitality, Urethral, Prostatic, Kidney and Bladder Troubles, Pelvic Diseases, Varicocele, Hydrocele, Skin Diseases, Rectal Troubles.

Some came to our office for treatment, others were unable to do so and took our home treatment. Today, these men are healthy and strong, free from every trace of their former affliction.

Hundreds of men are still suffering. If you are one of them, discouraged and despondent about your condition, call on or write to us immediately. There is no need for you to go through life suffering and unhappy. There is a way, simple and inexpensive, by which you can regain your health and strength. Hundreds have grasped the opportunity with gratifying results. Will you try it yourself?

If you are skeptical or doubt it, we gladly accept the chance to prove it to you. Prove it in a manner that will cause you

Office Hours 8 A. M. to 8 P. M.

BOOK  
FREE

As a means of acquainting everyone with our methods and our treatment we have published a 64-page book containing a full explanation and valuable information on all diseases peculiar to men. Those living out of town can have one of these books free of charge by writing a postal or letter. Book will be sent in a plain sealed envelope.

heartily recommend Gopher Death to every reader of this paper. It certainly does the work and does it well. See advertisement on page 3 and kindly mention this paper when writing.

## ABSORBINE FOR CUTS.

"I have been using your Absorbine on my cut and it is healing up all right. I have been using it for two weeks, and the sore was fourteen inches long and open three inches, and it has now come together so it is only four inches long and one inch wide. I think Absorbine is all right," writes Hans Stalley, of Atwood, Ill., under date of July 16, 1906. Absorbine is an antiseptic preparation, healing and soothing. Will heal a cut so that it will hair in and leave no signs of the accident. Two dollars per bottle at druggists and harness dealers, or sent express prepaid upon receipt of price. W. F. Young, P. D. F., 40 Monmouth St., Springfield, Mass.

## FARM SCALES FOR \$45.

At this price a farm scale which is guaranteed to be made of first-class material throughout should certainly be an attractive proposition. For forty years Jones of Binghamton, Binghamton, N. Y., has been making farm scales. He is so well satisfied that he is putting out a superior scale, that he is prepared to place these scales with users on trial. From time to time we have had something to say about Jones of Binghamton and his scales. We earnestly desire that our readers will inform themselves on this offer by writing for full particulars. Make your request to Jones of Binghamton, Box 418, Binghamton, N. Y. The advertisement will be found on page 6.

## GASOLINE ENGINES, HAY TOOLS, FEED MILLS.

Farmers who intend to install stationary pumping and portable engines should write to the Casaden-Vaughan Co., Waterloo, Iowa, for prices and descriptive matter of these engines. This firm also builds hay stackers, rakes, power and feed mills and thrashing machinery, which are to be found in stock at leading dealers throughout the state. Should your dealer not have them on hand you can write to the firm direct and secure the same proposition that you would be able to through your home dealer. When writing this company for descriptive matter kindly mention this paper. The advertisement appears on page 5.

## EVERYONE MAY SECURE A BUGGY

At rock-bottom prices by buying direct from the factory of which R. M. Knox, of Waterloo, Iowa, is president. This firm have been advertising in this paper for the past six years and have always had something good to sell to our readers. This company offers a first-class top buggy on thirty days' trial for \$45 on page 5. A full description and a cut of the vehicle appears there. The company states that if you are anxious for quick delivery you can order direct from the advertisement. However, they will send you a big huggy book which tells all about their complete line of vehicles. When writing to these people address, R. M. Knox, President, Western Harness & Supply Co., 613 Commercial St., Waterloo, Iowa. Write today.

## QUALITY IN FLINT COAT ROOFING.

Quality is the one prime essential in any roofing material. The price is barely a matter of figures, and small ones at that, when the roofing is a high grade. In such a case the price is long forgotten before the roofing shows wear. Quality in Flint Coat roofing is obtained by the impregnation of rock asphalt in the coating material of the felt sheets. Asphalt is one of the most durable water-proof materials known to manufacturers today. Flint Coat roofing is delivered at your railway station in full-sized rolls ready to lay. This includes nails and cement. Prices are quoted on page 15,

and when you order kindly mention The Homestead. Address your order to the Rock Asphalt Roofing Company, Commercial Station, Dept. D, St. Paul, Minn.

## PRACTICAL IRRIGATION.

A thirty-six page pamphlet has just been issued by Fairbanks, Morse & Co., of Chicago, Ill. It deals very thoroughly with the mechanical irrigation problem and contains much interesting and valuable information with reference to the many different types of pumping machinery used for this purpose. There are many fine half-tone illustrations showing irrigation plants in actual operation. These installations cover a wide range of service, including pumps operated by gasoline engines, steam pumping machinery, electrically driven pumps and pumps operated by windmills, and the advantages of each clearly defined. This is probably the most original and complete treatise ever issued on the subject. A copy of this pamphlet No. 603PI will be mailed free of charge to interested parties.

## A VALUABLE BUILDING MATERIAL.

Lino-felt is one of the latest materials to be used in house construction. Lino-felt is made of a flax fiber stitched between two sheets of resin-coated building paper. This produces a paper which is probably the best non-conductor of heat and cold that is to be found on the market. Anyone who is soon to build should by all means obtain samples of Lino-felt, as it is claimed by those who have tried it to be a superior building paper. By actual test it has proven to resist the passage of heat nearly 50 per cent better than any other material for this purpose known. Lino-felt may be used not only in houses but in barns and other outbuildings where warmth and protection are desired. Write for samples and prices to the Union Fiber Co., 16 Harvester Ave., Winona, Minn. Mention this paper in your correspondence.

## EARLY SEED CORN.

The unexpected happens every year, and disappointments will continue as long as time lasts. On page 10 will be found the advertisement of Ratekin's Seed House, of Shenandoah, Iowa, of early seed corn. In a private letter they say that there is never a year passes but what there comes a time when floods, cold, wet weather, hailstorms and other casualties come and that they have a great demand for extra early varieties of seed corn, and that it is seldom they are able to supply the demand made on them. They are, however, better fixed in this line this year than ever before. See their advertisement and preserve it, and if you are unfortunate enough to have to plant late or replant your crop, you will know where to get seed at a reasonable price. The address is Ratekin's Seed House, Shenandoah, Iowa.

## OPENING TO HOMESTEAD SETTLEMENTS.

A bill has recently been passed by congress authorizing the opening of a part of the great Rosebud Indian Reservation of southern South Dakota to homestead settlement. This settlement will be found largely in Tripp county and will no doubt offer as good opportunities as any reservation heretofore opened. The Rosebud Times is a paper devoted largely to local interests of that part of the country and will keep its readers posted on the most advanced news and developments regarding the opening of this land. The date for placing before the public has not been fixed, but the opening will be some time this coming fall. More than a million acres will be apportioned out between homesteaders. The only way to keep posted on matters pertaining to this grand opening is to watch the columns of the Rosebud Times which is published by Mr. Otis J. Baughn, of Gregory, So. Dak. The subscription price is \$1.50, which is cheap considering the information it will disclose to its readers. Send in subscription

## Wealth in Irrigation

New Opportunities to Acquire Home and Independence  
Cheaper than Paying Rent—Crops Large and Certain

On Tuesdays, May 7 and 21 and June 4 and 18, 1907, I will personally conduct you to this LAND OF OPPORTUNITY, to the growing towns and fertile, irrigated valleys of the Big Horn Basin, Wyo., where you can enter 160 acres of irrigated land at 50c. an acre plus cost of water; also the Yellowstone Valley with its beet sugar factory and irrigated lands. Do you want to go?

The Government is spending millions for irrigation in these localities.

These lands, adjacent to the Burlington Route, are as rich and productive as any the sun shines on, and lie along beautiful streams with an abundance of pure mountain water. Plenty of timber and coal. Climate, ideal.

Why pay rent when for same payments you can own your own home?

I am employed by the Burlington Route to show these lands and my services to you are free.

SPECIAL ROUND TRIP RATES from Omaha, Lincoln and Kansas City, \$20. St. Louis \$23. Chicago \$25. Excursions leave Omaha 4:10 p.m., Lincoln 6:00 p.m., Kansas City 9:50 a.m. and 6:05 p.m., St. Louis 8:02 a.m., and Chicago 9:15 a.m., on dates named.

NEW FOLDER FREE. For our new folder with large map, telling all about these lands, the markets, what the farmers raise, how to acquire title, and much other valuable information, write to

# LANDS AND HOMES FOR SALE

## The CANADIAN West is The Best WEST

**60 ACRES FARMS IN WESTERN CANADA FREE**

THE testimony of tens of thousands during the past year is that the Canadian West is the best West. Year by year the agricultural returns have increased in volume and value and still the Canadian Government offers 160 acres free to every bona fide settler.

**GREAT ADVANTAGES**

The phenomenal increase in railway mileage—main lines and branches—has put almost every portion of the country within easy reach of churches, schools, markets, cheap fuel and every modern convenience. The ninety million bushel wheat crop of this year means \$4,000,000 to the farmers of Western Canada, apart from the results of other grains as well as from cattle.

For literature and information address Superintendent of Immigration, Ottawa, Canada, or the authorized Canadian Government Agent, W. F. Bennett, 801 N. Y. Life Bldg., Omaha, Neb. E. T. Holmes, 215 Jackson St., St. Paul, Minn.

## FARMING for PROFIT

IN WESTERN CANADA

### Where WHEAT Is King

There is no country on earth that offers the inducements and opportunities for profitable farming offered by Western Canada. The wonderful fertility of the rich soil, the clean open prairie make farming easy and quickly profitable, and the tremendous yields of Hard Wheat enable a man to realize on his labor and investment more quickly than in any section or country in the world.

WE OWN AND CONTROL

**Over 500,000 Acres**

IN THE CHOICEST DISTRICTS. WRITE US FOR MAPS, PRICE LISTS, ETC.

307 Northern Bank Building  
Winnipeg, Canada.

## At Estevan, Saskatchewan "Rosy Promise Has Ripened Into Reality."

MEN of means may here invest surplus funds and watch dollars grow while they wait. Crops ripen plenty profit. We provide renters if you wish, but you can prosper proportionately to come and sojour among us. Renters east cannot know, and pay in rents the price of homes and prosperity here. Our locality may not be the Cream of Creation, but a land of prosperity. Instead of watching our smoke at a distance, buy land, secure an Estevan snap and rejoice with us. Generous crops cause gentle smiles. At Estevan no adversity with sorrowful countenance. There is a reason why. Ask and we will explain more. Our Homeseekers' Guide and a weekly newspaper, published at Estevan, Sask., will be sent for a time (free of charge) for the asking. Each will bring to you much information of our locality. The kind of profitable investment, of opportunity, of prosperity. Mention The Homestead.

Register of 150 farms free. Ten hunting preserves.

**H. W. HILLEARY & CO.,**  
Charlottesville, Virginia

Wanted to buy good, small to medium-sized improved farm adjoining town. Possession this summer or fall; particulars first letter. Otto Withnauer, Anita, Ia.

today. Read the advertisement on this page. Mention this paper when you write.

**WHOLESALE PRICES ON LIGHTNING RODS DIRECT TO FARMERS.**

Mr. Jos. Barnett, of Barnett & Co., of Riverside, Iowa, makes his initial announcement in this issue on page 11, setting forth not only the advantage of Pure Copper Cable Lightning-Rods, but he may be justly styled the farmers' friend, in that he places the very best possible 98 per cent Pure Copper Cable within the reach of all. He makes wholesale prices direct to farmers with instructions how to put the rods and points up so as to have absolute protection from that dread experience of lightning. We have been to the factory where Mr. Barnett's Copper Cable is manufactured and have examined the single strands of copper wire entering into the construction of his cables, and can say that it is honestly made and is as good apparently as is possible to make. The cable is continuous from the points on the roof to the moist earth into which they are grounded, thus obviating all joints that might come loose and prove worse than no rod at all. Our readers will find it to their advantage to write to Jos. Barnett & Co., at Riverside, Iowa, at once, mentioning this paper. He can ship to any point in the United States.

**BLACKLEG PREVENTIVE.**

With the coming of spring this disease is again making its appearance and the careful cattle raiser is considering the advisability of vaccinating his stock so as to prevent the ravages of this disease. There is no longer any question but that Blackleg Vaccine will positively prevent the disease, provided a reliable vaccine is used and in ample time. The loss of a single animal due to delay or faulty vaccine will frequently amount to more than the cost of sufficient vaccine for the entire herd. It is to the French scientists that we are indebted for the discovery of a reliable blackleg vaccine. They are recognized as being the greatest authorities on the subject and their vaccines have been successfully used all over the world for more than twenty years. Their vaccines can still be obtained through the Pasteur Vaccine Company, Ltd., of Paris and London, with New York and Chicago offices in this country. Numerous experiments have shown that their cord form, which is called "Blacklegine," is the best and most satisfactory form of blackleg vaccine. Each dose is separate and ready for use, and the necessary instrument is the most inexpensive on the market. The doses of Blacklegine are of a convenient size that can readily be handled and can be seen during the entire operation. There is, therefore, no question as to whether all the animals have been vaccinated when this form of vaccine is used. With other forms there is always a possibility of losing all or part of the dose before it is introduced under the skin of the animal. Furthermore, Blacklegine gives a gradual and increasing immunity, so that it is safer than any other method. The cotton threads which act as the vehicle for the vaccine are composed of cellulose in a pure state and are, therefore, impurities. We would suggest that you write to the Pasteur Vaccine Company, mentioning this paper, when they will be glad to give you full particulars. See page 12.

## 2,500,000 Immigrants landed in the U. S. in one year. Just Stop and Think!

THIS increase in 10 years will make 12 states the size of Iowa. **STOP AGAIN!** Where will land prices on diversified farming and corn lands of Iowa go? Floyd County, Iowa, is in the cream of this corn belt, where crop failures are never known. We have farms for sale in Floyd and adjoining counties, every foot of which can be cultivated; with good improvements, near school on Rural Telephone, at prices ranging from \$55 to \$90. Also good agricultural lands in Day, Brown, Edmunds and Waukegan and adjoining counties in South Dakota. Write or call upon us for lists, maps, prices, terms or further information. Agents wanted.

**LAND DEPARTMENT, FARMERS & MERCHANTS BANK, - - FLOYD, IOWA**

## HAVE YOU SEEN SMITH? W. F. SMITH REALTY CO., OF KEARNEY, NEB.

**WE SELL THE EARTH** Write us for our new list of central and western Nebraska lands, the cheapest for its value on earth. Write today. **W. F. SMITH REALTY CO., KEARNEY, NEBRASKA**

## UTAH NEEDS MORE FARMERS

BECAUSE its industrial population has grown beyond the production of the farms. Only 3% of the Agricultural Land remains to be developed, so there must always be the highest prices for farm products. Land yields from \$100 to \$200 per acre. Developed land is selling from \$100 to \$3,000 per acre. We have recently placed on the market a new tract of irrigated land on easy terms of payment. We have no more at \$60 per acre but a few tracts at \$70. When this is sold we will advance our holdings to \$80 and then advance it again. Get hold of it now. We will cultivate for you and make it income bearing. Our water supply is its strong recommendation. Write us for full information. Good agents wanted in every community.

**UTAH COLONIZATION COMPANY,**  
607 Pioneer Press Bldg., - St. Paul, Minn.

## A BARGAIN ...240 ACRE FARM... FRANKLIN COUNTY

FINE improvements, good soil, good markets. One of the best farms in the county. Easy terms.

**C. W. SOESBE, - GREENE, IOWA.**

## TAKE A TRIP TO SHREVEPORT

Next Excursion April 16.

YOU can buy good farm lands at \$5 to \$15 per acre. They will rent for \$3 to \$10 per acre yearly. Where can you beat this? Good schools, good churches, good climate and good water. Write today for free literature, booklet and folder telling all about this wonderful country.

**E. N. BROWN, President,**  
Kansas City Southern Land and Immigration Co.,  
652-654 Beals Bldg., - Kansas City, Mo.

## VIRGINIA Welcomes the Northern HOMESSEEKER

NO other State offers such opportunities. The climate is mild and healthy, the soil is rich and a little money will purchase a fine place with good buildings and every convenience. Write us. We will answer all questions. You'll wonder why you never investigated us before.

**C. M. BERGH'S SONS & CO.,**  
1439 Main St., - Richmond, Va.

## FARMERS, READ THIS!

IF you are going to buy land in Minnesota, North Dakota or Canada, either for cash or on the crop payment plan, it will pay you to write us for prices and terms and we will tell you how to get a free ticket to see our lands. **Gillian Bros., 555 Temple Court, Minneapolis, Minn.**

## FIELD NOTES.

Short-horn bulls are offered for sale by Mr. Jas. T. Dollison, of Sac City, Iowa.

Ten head of Junior Jim gilts are offered for sale by Mr. Austin Renshaw, of Blair, Neb.

Mr. Carl Hansen, of Herman, Neb., has a few choice fall Duroc Jersey boars for sale.

Polled Durham bulls are offered for sale by Messrs. Jas. Wilson & Son, of Avoca, Iowa.

Mr. U. G. Davidson, of Manson, Iowa, is offering a few Crimson Wonder 1 Am sows for sale.

Red Polled bulls and heifers are offered for sale by Mr. H. N. Hanson, Box 7, Brayton, Iowa.

Some good Percheron stallions are being offered for sale by Mr. G. C. Harrison, of Blencoe, Iowa.

Mr. C. C. Norton, of Corning, Iowa, is offering some very excellent young Cruickshank bulls for sale.

Galloway bulls are offered for sale by Mr. W. W. Scholes, of Onawa, Iowa. He is pricing these cheap for quick sale.

Large Improved English Yorkshires, from the best imported stock, are offered for sale by Mr. F. Rubeler, of Leigh, Neb.

Some good young Scotch bulls are being offered for sale by that well-known Short-horn breeder, Mr. Ernest Funke, of Greenfield, Iowa.

Messrs. C. W. Daws & Son, of Harlan, Iowa, are offering a few very excellent young Scotch bulls for sale, and they are bred in the purple.

If you want Hereford bulls read the advertisement of Mr. A. F. Hagar, of Avoca, Iowa. He has several for sale, including one imported bull.

Missouri and Kentucky jacks are offered for sale by Mr. C. T. Gollehon, of Blair, Neb. He also has Percheron stallions and mares for sale.

Some fall Duroc Jersey boars sired by the second-prize Iowa State Fair boar, Tom Davis, are offered for sale by Mr. W. J. Prather, of Russell, Iowa.

Mr. Roy West, of Bondurant, Iowa, who topped the Johnson Bros. & Newkirk sale last winter with Bessy Advance 3d, has six fine pigs from her, sired by Perfect King, that are the pride of his pens. The other

sows are doing finely and the March crop will number close to 100 pigs. We are glad this young Duroc Jersey breeder is being smiled upon by fortune.

A few good Scotch and Scotch-topped bulls, sired by Imp. Scottish Pride and Imp. Lord Mount Stephen, are offered for sale by the Ardmore Stock Company, of Holstein, Iowa.

A choice lot of Berkshire fall gilts are offered for sale by Mr. C. J. Martin, of Cburdan, Iowa. There are some decidedly showy ones among the bunch and he is pricing these right.

Lord Tennyson 48208, a 2,200-pound gray Percheron stallion, and one of the best in the West, is offered for sale by Mr. J. S. Golder, of Scribner, Neb. He also has others for sale and at very reasonable prices.

Mr. J. C. Spearman, of Papillion, Neb., one of the best young live stock auctioneers in the West, is now booking dates for fall and spring sales. Mr. Spearman is all right and will make you a good sale. Write to him and book your sale date.

Messrs. Allen Bros., of Russell, Iowa, breeders of Improved Chester Whites, advertise some thrifty young boars for fall breeding. They have been carefully selected from a bunch of twenty and have been kept growing all winter. Jack the Ripper is their sire and is a fine type of hog from his toes to his top line. Any man looking for good yearlings will do well to pin this in his hat. The advertisement appears on page 25, and those writing will confer a favor on both this paper and the advertisers by mentioning The Homestead.

Mr. H. S. Allen, of Russell, Iowa, one of the best-known Duroc Jersey breeders in the state, has several fall boars for sale sired by the Iowa State Fair sweepstakes boar, Crimson Wonder Again, and Top Notcher Again, the World's Fair boar. He says three of these boars are good prospects for show and will sell them worth the money, as he must make room for spring crop. He says he has eighty spring pigs up to date and some sows to farrow yet. Some enterprising breeder might drop in on Mr. Allen and pick out a boar that will do him a lot of good. Write him, anyway, if you are on the market for a pig.

Mr. Frank Festl, of Nora Springs, Iowa, writes as follows regarding the Hereford cows and heifers which he is advertising on page 22: "The stock which we are offering for sale is in good, thrifty condition and should be in nice shape to go onto grass for summer grazing. The calves are sired by Doncaster, a son of Lamplighter. More or less Anxiety blood prevails in this offering. Doncaster is closely related to Beau Donald, and he is proving a first-class sire. He could be made to weigh 2,400 pounds easily, and people buying our cattle will secure plenty of size and good fleshing qualities." Kindly mention The Homestead when you write.

Virginia blue grass is noted for its luxuriance and grazing qualities the world over. At present there are for sale at a bargain magnificent estates, as well as small farms. Much of this land has been held by people who have disregarded the necessity of keeping up the fertility of the soil. Some of these farms have the very best of improvements. Unexcelled opportunities no doubt are offered to the right individuals for investment in Virginia land. It is a beautiful country, as well as a prosperous one. A register of 150 farms listed in all states will be sent free by addressing Messrs. H. W. Hilleary & Co., Charlottesville, Va. This firm list a few farms on page 19. Mention The Homestead when writing.

Mr. J. S. Kennedy, the well-known breeder of O. I. C. swine, located at Blockton, in southern Iowa, will hold a fall sale October 10th at which time he will offer some very choice spring and fall yearlings of both sexes. This herd contains much noted breeding and at the head will be found Lookon King (13447), a premium winner taking four ribbons in as many classes at the Indiana State Fair in 1903. He has proven his merit as a breeder. As assistant herd boar Blocky Boy stands as an exceptionally good yearling, also Dandy Boy, a son of Prescott Boy, the champion at the Iowa State Fair. This will be a sale of attractive stock and announcements will appear in due time.

Imported and home-bred draft stallions and mares are offered for sale by Mr. Geo. W. Bilbo, of Creston, Iowa. This firm was formerly composed of Messrs. Bilbo & Wilson. At present the stables of this dealer have some very good specimens of Percherons and English Shires, all from imported stock. Every animal that is sold from this farm is guaranteed to be sound and first-class in every respect. Mr. Bilbo is an extensive land owner in the vicinity of Creston and manages his farm personally. Selling stallions is a feature of this business. If any of our readers are looking for some high-grade young stallions at moderate prices they should write to Mr. Bilbo, addressing him as above. Kindly mention The Homestead in any correspondence you may have with this advertiser.

Mr. August Voge, of Portsmouth, Iowa, is in full bloom this spring with a crop of 160 spring pigs, backed up by fifty fall pigs. These are sired by the first-prize boar, Kruger Lad, also by his well-known prize-winning boar, Crimson Wonder 1 Am 2d, Clearmont's Model, also a first-prize Iowa State Fair boar, Iowa Notcher and Red Knight Again, a son of the sweepstakes boar, Red Knight, and a few by Perfection Boy by old King Perfection. He has certainly got enough pigs from which he can make some good selections this fall. He is particularly fortunate this year in having a yearling sow, a daughter of Ohio Chief II, that bids fair to make them all go some. She is the best thing we have seen this season and it will take a good one to beat her. She is out of a daughter of old Tip Top Notcher and she is as smooth as a ribbon. This sow is particularly fancy in head and ear, a good back and wonderful depth of body, and if nothing goes wrong with her she will certainly be in the winnings and right at the top. Kruger Lad 48581, the first-prize boar at the last state fair, and owned jointly by Mr. August Sonneiland, of Harlan, Iowa, and Mr. Voge, is now coming on in good shape, and it is their intention to show him this fall. He is just beginning to come and if carried along from now

on and continues to do well should come back again this fall and make a good show. Mr. Voge is an excellent fitter and if any man can bring him out he can. From the number of spring pigs that he now has on hand he ought to be strictly in it this fall and winter.

Recently a representative of this paper called on stockmen in the vicinity of Bethany, Mo., and found a good number of enthusiastic men breeding pure-bred stock. Mr. C. E. Tennant's herd of Poland Chinas is headed by a well bred boar, Tormentor, and he is being mated to some splendid sows both from the point of breeding and individuality. Some of the herd will be shown this fall. Mr. Ellis Hill raises Duroc Jerseys and Shropshire sheep. The demand for his stock keeps his surplus disposed of. Mr. D. Brown, a near breeder of red hogs, is making a specialty of Buff Plymouth Rocks and reports good business. On the farm of Mr. J. C. Wilson was found some fine stock in all breeds, including a number of showy standard breeds. Herds and flocks are in good health in this region and the new crop should produce some good breeding stock.

Mr. J. E. Wehr, of Portsmouth, Iowa, one of the well-known and popular Duroc Jersey breeders in western Iowa, reports about seventy-five spring pigs, with seven more sows to farrow. These are sired by Proud Advance Jr., Orion's Model, Minnesota Chief and Young Surprise, boars all owned by himself. He also has a number of litters by other noted boars and has a Proud Advance sow that will farrow soon to Ohio Chief 2d. He is giving the pigs his undivided attention and may be out with the boys this fall at the fairs. Ohio Anna, the dam of Crimson Wonder, was bred to Ohio Chief and he expects something good from this mating. Mr. Wehr has made several good sales and his hogs have given good satisfaction. He is one of the breeders that always stands behind what he sells, and he is one of the most enthusiastic young breeders in the state.

A few high-grade Scotch bulls are advertised by the Ardmore Stock Company, of Holstein, Iowa, on page 22. One of them is Victoria's Pride, a bull of choice quality and a prospective herd header of high merit. He should suit the most exacting buyer. Another choice one is Royal Command, a coming two-year-old sired by Imp. Lord Mt. Stephen and out of Miss Ramsden of Ardmore. This bull is solid red in color, very blocky, is close to the ground and right in every way. There are also several good Scotch-topped bulls for sale at moderate prices, sired by the same bulls mentioned above. Recently the Ardmore Stock Company sold Orangeman, a yearling son of Lord Mt. Stephen, to Mr. Spencer Jones, of Carroll, Neb. Breeders looking for stock of this kind should get into communication with this advertiser at once. See page 22 for pedigree of Victoria's Pride. Kindly mention The Homestead in your correspondence.

A representative of The Homestead recently visited the Hereford herd of Mr. F. W. Hann, of Harlan, Iowa, who is now building up one of the best herds in western Iowa. He has recently purchased at a long price the double-bred Beau Donald bull, Prince Donald 626345, and he is now at the head of the Hann herd. He is one of the best-bred bulls in the state, is an excellent individual and should do much towards bringing this herd to the front. He was shown as a youngster at the International and got fifth place in a class of thirty-seven. Mr. Hann formerly owned the well-known show bull, Ike 77284, and Spartan Grove 2d 153707, and he has a lot of cows and heifers now in the herd sired by these two bulls. These will be mated to Prince Donald with the view of producing the kind of Herefords that they are all looking for. Mr. Hann is one of the enterprising and enthusiastic young Hereford breeders in Shelby county and it is his intention to build up one of the best herds in the state.

Mr. H. S. Allen, of Russell, Iowa, proprietor of the Mulberry Grove herd of Duroc Jerseys, is now booking orders for fall trade. At the head of this herd are probably two of the best breeding boars in the West, namely, Top Notcher Again and Crimson Wonder Again. Mr. Allen is offering some special bargains in fall boars by Top Notcher Again. Three of these are good enough to fit for show and one of them is out of a Proud Advance dam, while the other two are out of Mulberry Queen, one of the best sows on the farm. Besides these, there are good herd headers and also some splendid young boars for farm trade, all of which will be priced below their value, as Mr. Allen writes that the crop of spring pigs is fully up to expectations and will require his full time. Prices will be quoted on a few yearling sows bred to Crimson Wonder Again, and these should certainly prove valuable additions to any herd. Any of our readers who are in need of some good Duroc Jerseys of any age will do well to write Mr. Allen. He is always ready to show buyers something choice. His prices will be moderate, we feel safe in saying, considering the quality and breeding of what he offers. Visitors will always be welcome and correspondence will be promptly answered. In writing kindly refer to The Homestead.

A letter from Mr. J. G. Truman, manager of Trumans' Pioneer Stud Farm, Bushnell, Ill., reads as follows: "I am much pleased to say that our new importation arrived here in first-class condition on the fourth inst. The quality of this shipment has been gazetted in the English journals as one of the most select shipments forwarded to the United States. Our trade continues rather brisk. Among the most noted sales this month is the imported Shire stallion Toneham Harold to Messrs. Lewis & Hodge, Mechanicsburg, Ohio. We consider this colt among the best of his age we have imported. Dousby Meustrel goes to John Smith, Harpers, Iowa. Mr. Smith used excellent judgment in selecting this grand specimen of the Shire breed. Councillor, an imported Shire rising six years old, goes to W. T. Fancher, South English, Iowa. Desford Deacon, imported Shire stallion, rising five years old, we have sold to that enterprising young breeder, D. H. Hellyer, living in the vicinity of Bushnell, Ill. It is needless to say that to satisfy the enterprising breeders of this section of McDonough county, it took a strictly first class draft horse. This horse will undoubtedly be heard from in the show rings, as at the present time in this condi-

## 10 Points to Consider When You Buy A Buggy.

Buy direct from the factory. My \$45 Knox Special Top Buggy is sold that way. No dealer's profit for you to pay. No salesmen or jobbers for me to pay to sell my buggies. I sell direct to you. Get my Knox Buggy on 30 days' trial. Use it a month, test it in every possible way, and send it back if not satisfied. And I will pay the freight both ways.

Be sure your buggy is guaranteed by a reliable maker. I guarantee the Knox for two years. That is another advantage of dealing directly with me.

My \$45 Knox Top Buggy is a comfortable rider. It has a wide, roomy seat. That very same buggy at your

local store sells from \$75 to \$90. So you easily save \$30 in jobber's and dealer's profit.

The body is 24 inches by 54 inches. The gear is oil tempered. Long distance, full clipped axles. Easy riding spring. Full plated reaches.

The shafts and wheels are guaranteed to be split hickory. Oval edge tires.

My Knox buggy is handsomely painted and tastily upholstered.

It has a four how leather top. In short, it's the leader of my big line of buggies, carriages and vehicles of all kinds. Remember, I sell them all straight from shop to buyer, guaranteed, and a big saving to you.

Send for my big buggy book. It's free. Tells more about my line. But order my \$45 Knox Buggy now, right from this advertisement. You are safe. Address

R. M. Knox, President,  
Western Harness & Supply Co.,  
613 Commercial St., Waterloo, Iowa.  
P. S. Have been advertising in The Iowa Homestead for six years.

Why travel a thousand miles to inhale the aroma of the PINE? We will send a large PINE NEEDLE pillow for 50 cents. Write for particulars. Address, C. F. Merriam, Ozark Mountains, Eureka Springs, Ark.

tion he weighs 2,100 pounds. To Messrs. J. F. Fleming and Zion F. Baker, of Sullivan, Ill., we have sold the brown five year old imported Shire stallion, Buller V, which horse we consider one of the very best we ever imported. While recently imported, this colt weighs over 2,200 pounds and he looks like maturing to a 2,400 or more. Messrs. Baker & Fleming had to pay a long price for this horse, as we intended to reserve him for next fall. To those enterprising breeders, Ed Burnham and T. T. Gray, of Industry, Ill., we sold the imported Shire stallion, Thorney Teamspan II. One thing we are proud of and that is the sales to Mr. Hellyer and Messrs. Burnham & Gray this week make a total of forty-six stallions we have sold in our own (McDonough) county during the last six years. To Messrs. F. A. Pike and H. S. Braun, of Nichols, Iowa, we sold the noted five year old imported Shire stallion, Saxon Jet. All going well, this horse will be seen at the fairs this fall, as we have reserved the show privilege of him. To Mr. James R. McConnell, of Allerton, Iowa, we sold the imported Shire stallion, Bulwark Lion Heart. We are much pleased to report the sale of this colt as it is now some twenty-five years since we sold our first Shire stallion in Wayne county, Iowa. We still have quite a good many strictly first-class Shire and Hackney stallions for sale and feel sure

April 25, 1907.]

that anyone anticipating the purchase of one will do well to see our horses before they buy. We will be pleased to mail our catalog to any of our readers mentioning your paper."

Messrs. Rhea Bros., of Arlington, Neb., well-known Percheron horse breeders, are in receipt of the following letter from one of their patrons: "Cambridge, Neb., March 3, 1907. Messrs. Rhea Bros., Arlington, Neb. Gentlemen:—I thought I would write you a few lines, as I believe a well pleased customer is a square dealer's best advertisement. Well, the stallion I bought of you weighs 2,000 pounds and I think he is the best horse I ever got my eye on, and he is acknowledged by every one the best horse in this end of the state. He will have fifty colts this year and his book is full for the season. I would not look at \$2,000 for him. We have one colt from him and others are coming right along. Thanking you for your kindness and square dealing, and wishing you all kinds of success, I am, yours truly, E. S. Hardin." Messrs. Rhea Bros. have several other young stallions that show as much promise at the same age as the Hardin stallion, and they are selling them at prices that anyone can afford to pay. They have a grand lot of home-bred stallions, ranging in age from yearlings to five-year-olds. They have the best lot of two-year-olds that can be found in the West. These are all blacks, with plenty of size and lots of bone, and they are strictly all right. The boys always sell their own horses, employ no middlemen or agents, develop their horses themselves and can therefore make the price right to suit a customer. Write or go and see what they are offering.

A representative of The Homestead recently had the pleasure of inspecting the Short-horn herd of Mr. George Allen, of Lexington, Neb., which is one of the foremost herds today in Nebraska. The Allen herd is practically a Scotch herd and includes such well-known Scotch tribes as Victoria, Missie, Bravish Bud, Secret, Butterfly, Nonpareil, Matchless, Acanthus, Clara and several other families. For many years and until his death recently, the Allen herd was headed by the noted bull, Godwin 115676, a twin brother to the famous bull, Godoy. He formerly headed the Col. W. A. Harris herd at Linwood and from there went to Illinois and was then purchased by Mr. Allen. He was a son of Imp. Spartan Hero and out of Imp. Golden Thistle by Roan Gauntlet. He died recently, but left behind him something that will live after him. In the last Allen sale at South Omaha his get averaged considerably over \$200, including a lot of young bulls and heifers. He was an excellent breeder and there is every evidence of it on the Allen farm. One of his best sons is Godwin's Best, a two-year-old out of Lady Lavender by Golden Shield, the latter sire being considered by Colonel Harris one of the best ever bred at Linwood. This youngster is a straight Lavender, and his dam cost Mr. Allen \$800. This bull is hard to fault, has a wonderful back and loin, a nice forerib and a smooth shoulder, good head and nice horn, and a splendid quarter. He is a flesh carrier and the making of a great herd bull. Another promising youngster is Acanthus King, one of those mellow-fleshed roans. He is a son of Godwin out of Nellie Acanthus by British Chief. Here is a bull that is good from end to end, and is one of the most promising young bulls we have seen this year. Another great young bull is Lavender King out of a daughter of 4th Grand Baron. He is a yearling, is bred right and is right, and will make a splendid herd bull. Mr. Allen has another well-bred yearling called Nonpareil Duke. He is one of the best-bred young bulls in the herd. Altogether he has ten young Scotch bulls of the very best families, and it will be an easy matter for anyone who wants a herd bull to make a selection here. He has about fifty calves on the farm so far this season, and the herd is in excellent condition. His Shropshires are doing fine and he has 300 yearling rams and 100 yearling ewes. The Allen flock of Shropshires is one of the most noted in the United States, and has won its share of the best ribbons not only at the World's Fairs, but at nearly all the state fairs. If any of The Homestead readers want a good ram or a few choice ewes, or a well-bred Short-horn bull it will pay them to visit Mr. Allen and see what he is offering for sale.

#### HEREFORD BULLS.

Anyone wanting a good young Hereford bull should write or go and see Mr. A. Spooner, of Mondamin, Iowa. He is offering twenty-five of these youngsters for sale, all sired by Beau Donald 12th and ranging from ten months to two-year-olds. He can fill a car load order if necessary or will sell them singly, as buyers want. Write Mr. Spooner about these bulls or go and see them. NOVINGER & SONS OFFER SHORT-HORN HERD BULLS.

Messrs. Isaac A. Novinger & Sons, of Kirksville, Mo., are offering two yearling Short-horn bulls that should go to do service in some good herd. Both are Scotch and while of different types, both are bulls of unusual quality and merit. See page 27 for Messrs. Novinger & Sons' advertisement and write them if in the market for something high class.

#### PUGSLEY'S GALLOWAYS.

A representative of The Homestead recently visited the herd of Galloway cattle owned by Messrs. W. O. Pugsley & Sons, of Genoa, Neb., and was pleased to see every evidence of the high standard maintained here when this herd was founded. From years of personal acquaintance with this herd, and with their foundation stock, we are in a position to say that there are few better Galloway herds on this side of the water. At the head of the herd stands Imp. Wolf 7245 15055, a bull that was shown successfully at many of the leading fairs, and a bull that has proven himself a good sire. He is the sire of nearly all the young things in the herd. Quite a number of the best females were purchased from the famous Wavertree herd, considered, in its day, one of the best Galloway herds in America. Messrs. Pugsley & Son have a number of splendid young bulls for sale, ranging from yearlings to two-year-olds, and they will also sell a few very choice young heifers. Here is a most excellent place to get a foundation for a Galloway herd. When

writing to them kindly mention The Homestead.

#### A FINE LOAD OF HEREFORD RANGE BULLS.

One of the finest loads of range bulls the writer has seen this year is being offered by Messrs. Kater & Smith, of King City, Mo. They range from twenty to twenty-four months, are big and are in first-class condition. It will pay the man hunting a high-class bulls that have quality to look after these at once. See page 22 for Messrs. Kater & Smith's advertisement.

#### SHORT-HORN BULLS FOR SALE.

On page 22 of this week's Homestead will be found the advertisement of Mr. A. B. Clark, of Wayne, Neb., who offers a splendid bunch of young Short-horn bulls for sale. These are sired by such bulls as Cumberland's Hero and Merry Marshal, and are growthy, big-boned fellows. Mr. Clark will sell these bulls singly or he can fill out a load for anyone who wants them. Mr. Clark owns one of the best Short-horn herds in northeast Nebraska. He has just sold a Lord Banff bull and also Scotch Cup, both going to Bloomfield parties. He is now offering some good bargains in these bulls for quick sale. When writing him kindly mention The Homestead.

#### LAKE & STUBBS' RED POLLED SALE.

On June 12th, Messrs. W. H. Lake and H. F. Stubbs, of Bradshaw, Neb., will hold a sale of Red Polled cattle at the farm of Mr. Lake, three and one-half miles east of Hampton, Neb., and will offer some of their very best animals. They are among the oldest breeders of Red Polleds in this section of Nebraska and have bred some of the best breeding stock now in service in the best herds in the business. They will offer about twenty good, strong yearling bulls just in proper condition to put into service right at once. They are very growthy and their breeding is as good as can be found anywhere. The females are a very beefy lot and as milkers are hard to beat. There will be several cows in this sale with calves at foot and those that have not are safe in calf to extra good bulls. Send in your name for a catalog and mention this paper.

#### CHOICE FALL BOARS FOR SALE.

We wish to say to those who are in the market for a good fall boar that Mr. S. J. Tillman, of Ragan, Neb., has a few choice Duroc pigs for sale that are good enough to head herds. They are the most growthy bunch of youngsters we have had the pleasure of looking at this year and we will recommend them to anyone who is in the market for a good fall boar. They are mostly the get of Jumbo's Ideal, he by the great show boar, Jumbo's Perfection, twice a first-prize winner in his class at the Nebraska State Fair. Their dams are such sows as Rose Loudon, she by Hambletonian, the first-prize yearling at Nebraska, 1903. Two of these are of June farrow sired by Jumbo's Ideal, dam Mama's Image by the great Hambletonian. They are right in every respect and should go to some good herd. Write Mr. Tillman in regard to these boars, as we are sure he will be able to fill your order. When writing please mention this paper.

#### A GREAT IRRIGATION PROJECT.

Under the above caption the Canadian Pacific Railway Company have issued an elegant illustrated hand-book of information regarding a great irrigation project which is being carried out in Alberta, Canada. The details of this great undertaking are fully described and illustrated with rich half-tones from actual photographs. This scheme, which is probably the largest individual irrigation scheme on this continent, is being promoted for the purpose of turning a large part of the rich semi-arid country in Alberta to the most valuable kinds of farming land. While farming has been carried on in this region for a good many years prior to the inception of this irrigation scheme, there has not been the marked success in the growing of crops that there should be, considering the richness of the soil. The Canadian government has turned its attention to the matter and the project is being carried out by the Canadian Pacific Railway Company. For full detailed information regarding land in the irrigated district apply to the Canadian Pacific Irrigation Colonization Company, Calgary, Alberta. The elegant booklet which they issue should be in the hands of every prospective land seeker who is looking for a future home in one of the best mixed farming, stock raising and dairying communities in Canada. Mention The Homestead when making application for this booklet.

#### MRS. C. S. CROSS TO DISPERSE THE FAIR ACRES HERD OF HEREFORDS.

On Wednesday, May 15th, Mrs. C. S. Cross, of Emporia, Kan., disperses her entire herd of Herefords known as the Fair Acres herd. The sale is to be held at Fair Acres Farm, near Emporia, Kan. The herd numbers about seventy-five head, but as many young things sell at foot a smaller number of lots will be sold. The foundation stock for the Fair Acres herd was selected by Mrs. Cross from stock that made the Sunny Slope herd for Mr. C. S. Cross. She was familiar with the herd, knew the strains that had been among the best producers and as a result was able to lay a foundation that has proven that Mrs. Cross made no mistake. The offerings made from the herd have always proven tops of or well up among the tops of sales to which they have been consigned. Heading the list of nineteen bulls that sell is the herd bull, Christy 23417, a son of Keep On 2d and out of a Lord Saxon cow. Christy is nearing two years of age, is a showy fellow, a fine handler, thick from end to end with well-sprung ribs and a herd bull of great individual merit. The remaining bulls are yearlings or just coming yearlings that were got by Tranquility, a son of Beau Brummel, or Beau Real. There is herd bull material among these and it will also pay the man hunting range bulls to be on hand. Among the cows and heifers will be found some rare good things, as in the family of Dew Drops, Imp. Dew Drop and her nine daughters and granddaughters. Imp. Dew Drop is now eleven years old and has produced a calf every year since she commenced breeding. Mrs. Cross has never sold the high-class heifers from the herd and as a result the herd has been made strong in females. Another favorable condition is the fact that

#### OUR RED LETTER

## Combination Offer

AGAIN OPEN TO THE FARMERS OF THE MIDDLE WEST

**FIVE SPLENDID PAPERS and MAGAZINES for \$1.25 A YEAR. SEND US YOUR SUBSCRIPTION TODAY.**

The Homestead has never made an offer to its subscribers which proved so widely and immediately popular as did our famous "Red Letter Combination" last season. Thousands upon thousands of farmers throughout the corn belt took advantage of it to supply their families with an abundance of wholesome, instructive and entertaining periodical literature, and we have been asked many times if the offer would again be open to renewals and new subscriptions. Although the profit on such an offer is necessarily small, we have decided to repeat the offer during the present season and have secured the consent of the other publishers interested to advertise it again for a limited time, subject at any time to revocation without notice.

**THESE FIVE PUBLICATIONS FOR \$1.25 A YEAR.**

The Homestead, the world's greatest farm paper, published weekly at the heart of the corn belt and dealing with agricultural problems from the middle-western point of view; edited by farmers residing upon and operating their own farms; not a one-man paper, but the embodiment of the combined wisdom and experience of a large staff of editors and contributors; with departments covering the whole range of farm life in this section.

The Chicago Weekly Inter Ocean, a grand general family newspaper, giving an abundance of news, literature, poetry, humor, market reports, reading matter for women and children—something for every member of the family.

The Kansas City Weekly Star, an able, fearless, independent newspaper, dealing with the problems of the day from an independent point of view. Literary contents very attractive and uplifting.

The Homemakers, a delightful monthly for the women and children of the farm, readable and valuable from first page to last—brightening and broadening the life of every member of the farm.

The Farm Gazette, a beautiful magazine of profitable agriculture, printed on fine paper, with elegant illustrations and a cover in colors.

If already a subscriber for any of them, your time will be extended for one year.

To secure this great bargain, clip and fill out the following coupon:

Date ..... 190..

Homestead Company, Des Moines, Iowa:

Enclosed find \$1.25, for which please send the following five newspapers and magazines for one year to my address: Iowa Homestead, Chicago Weekly Inter Ocean, Kansas City Weekly Star, Farm Gazette and Homemakers, as per your special offer to Homestead readers.

Name .....

Postoffice .....

Rural Route ..... State .....

these Hereford cows are milkers and capable of raising great, big, strong calves. In all, twenty-eight breeding cows are listed and many sell with calves at foot. The remainder of the offering are heifers, some of breeding age and others just coming of breeding age. It is at these dispersion sales that buyers get a chance at the best, and as Mrs. Cross sells every animal under a positive guarantee, buyers will find this a sale that it will not pay to miss. Catalogs will be sent on request and we urge all our readers who are interested in good Herefords to send for one. See page 22 for advertisement and when writing kindly mention The Homestead.

#### CHOICE ABERDEEN ANGUS BULLS.

On page 22 of this week's Homestead will be found the advertisement of Mr. W. H. Jones, of Quincy, Iowa, who offers for sale some decidedly high-class young Aberdeen Angus bulls. One of his choice ones is an Erica bull, twenty-two months old, and a son of the noted bull, Imp. Edward R. (61744), dam Imp. Eline of Balmoral (61747). He is one of the very best bred young Erica bulls that is offered for sale, is an excellent individual and a good breeder. He should go to the head of some good Angus herd. Mr. Jones also offers a good Pride bull for sale, sired by Cherokee Blackhawk (59521), dam Imp. Pride of Bravali 30th (59802), an exceptionally thick bull, just twelve months old. He also has two well-bred Blackbirds, one a ten and one a twelve-months-old. These are both sired by Blackbird Man 72249 and out of Blackbird of Cleveland 7th and Blackbird of Cleveland 10th. One of these is fit to head any herd in the West. He has a number of others from ten to twenty months old that are bred along the same lines. Any of our readers who want an Angus bull can find what they want in the young bulls that Mr. Jones is offering for sale. Mr. Jones is reasonable in his price and he will be pleased to show these bulls to prospective buyers. Write him at once about these or go and see them. Kindly mention The Homestead when doing so.

#### FINISHING OFF FAT STOCK.

As the weather grows warmer in the spring, cattle and hogs in the fattening pen are apt to have a light appetite. They are effected much as people are at this time of year and need some condiment to sharpen their appetite. Just as we like salt and pepper and mustard and horse radish and such seasoning for our food, so the animal needs a little seasoning or tonic at this time of year. A little stock food mixed in with the corn or oats is a good thing for the steer or hog nearly ready for the market; it keeps them up to full feed and finishes them off in a way which cannot be done on grain alone. At this season of the year, too, the horses are being worked very hard and are apt to lose flesh quite rapidly. It is necessary that they should be fed heavily and that they should be able to digest and assimilate their feed to the best advantage. It keeps them in good condition and gives them a slick coat to mix a little tonic in the way of stock food in their feed box. The American Family Supply Company are offering a pail of stock food free to those who will write them a card, asking for their free

offer. The members of this firm are men of integrity who have been in business for a great many years and are known throughout all the middle states. The stock food which they are putting on the market is used by many large feeders. It will pay you to write them at once. Address: American Family Supply Company, 1711 State St., Chicago, Ill.

#### THE AMERICAN AUCTION SCHOOL CATALOG IS READY.

Col. Harry W. Graham, of Chillicothe, Mo., president of the American Auction School, has just had compiled one of the neatest catalogs that has reached the writer's desk in many days. It is a twenty-four-page book exclusive of the cover and gives complete all the various branches taught in Colonel Graham's school. The American Auction

School is the second oldest school of the kind in America and was organized by a man who knows the requirements of the auction ring. He is also a breeder of pure-bred cattle, has been associated with the breeding business and especially the selling end of the business for years, thus enabling him to instruct along all lines of the pedigreed live stock industry. From the introductory page to the back cover page the man who contemplates entering the auction business as a salesman will find much that should aid him in deciding how best to qualify for his chosen profession. There are also given many fine testimonials from former students, also what the leading auctioneers of America have written Colonel Graham about the American Auction School. Colonel Graham will be glad to send one of these catalogs

**HEREFORD DISPERSION****EXTRAORDINARY****We dnesday, May 15, 1907**

These cattle have been the source of much profit to me and will make you money. As I am retiring, you get a chance at my entire herd without reserve. Send for catalogue, mentioning The Homestead.

**Auctioneers.****COL. F. M. WOODS and MR. GEO. P. BELLOWES.****At "Fair Acres Farm," Near Emporia, Kan.**

The blood of Albion, Lord Saxon, Wild Tom, Java and Keep On. 19 yearling bulls, headed by Christy 23417, he by Keep On 2nd, and out of Fashion by Fashion by Lord Saxon. 28 grand bred ing cows, many with calves at foot. 12 extra fine heifers, yearlings. The balance are young things of great promise.

**MRS. C. S. CROSS, EMPORIA, KAN.**

to any who are sufficiently interested in write. See page 27 for the advertisement of the American Auction School and when writing kindly mention this paper.

**PARADISE STOCK FARM OFFERS ANGUS BULLS.**

Mr. W. F. Eckles, of Green City, Mo., proprietor of the Paradise Stock Farm, is offering some rare bargains in Angus bulls, they being second to none in his section of Missouri. Leading the list is the herd bull, Albion 5th, a double Pride bull that Mr. Eckles would not sell, but he has so many of his heifers that he cannot use him longer. A trade would be considered on him. The others are just of serviceable ages and are offered low considering the quality. A few heifers got by Pride's Albion and bred to Homedale King 2d 85639, a grandly-bred Pride bull and a high-class individual, are also offered at such prices as should move them. Mr. Eckles is a gentleman of high standing in his community, is a director of the Citizens Bank, of Green City, Mo., and is noted for his square dealings and business ability. Mr. Eckles' farm joins Green City on the west and he gives the stock his personal attention. He also breeds Berkshire hogs and is booking orders for pigs for fall delivery. Write him today if wanting stock such as he offers, or better still, go to Green City, see the stock and partake of Mr. Eckles' hospitality. See this page for his advertisement.

**LAST CALL FOR THE GUDGELL & SIMPSON SALE OF ANXIETY 4TH HEREFORDS.**

The Gudgell & Simpson offering of Herefords in the sale pavilion at the stock yards, Kansas City, Mo., on Thursday, May 2d, is made up of twenty head of choice young bulls and thirty heifers, all two-year-olds and all bred. This is as it should be, as buyers will get animals with their entire usefulness before them. It is after thirty years of experience that Messrs. Gudgell & Simpson became convinced that it is more satisfactory to both the seller and the buyer to deal in young animals of this sort. Older breeders are familiar with the Gudgell & Simpson herd and know that they were the gentlemen who have promoted the Anxiety 4th type and that their herd is headquarters for the modern or Anxiety 4th type, a type that has met and is meeting with the approval of the best breeders and with the judges in the largest shows. This and the fact that these older breeders have returned repeatedly to the Gudgell & Simpson herd for breeding stock should convince the younger breeder that it will pay him well to look to the Gudgell & Simpson herd for either herd bull material or some choice females to add to or for founding a herd. In looking over the list of animals cataloged for the sale it will be seen that every animal is of their breeding, also that they have been the breeders of both sires and dams for generations back. It is animals of this sort that have done most to make the reputation of the Gudgell and Simpson Herefords, as they are so bred as to insure prepotency through sires that have been strong breeders. Since they brought over Anxiety 4th and North Pole it has been their aim to develop a uniformity of type and at the same time animals that have the two good ends and a good middle. They were among the first to develop the much-sought-after droop horn and in their sales are found only such animals as they are pleased to recommend and put out as breeding stock. The herd today numbers over 900 head and for this sale they have selected the choicest things of the ages represented in the catalog. As the grass season is at hand the buyer will find this an excellent time to buy, as he will have no winter feed bills on account of his purchases. Another thing in favor of buying now is that the man who fixes and improves his herd will be in line to take advantage of the rise that is coming in the pure-bred cattle markets of the world. The cattle for this sale are in good condition and have been well grown out, which is in the buyer's favor. If you have not yet received a catalog, write for one, study the lines of breeding that have made the Gudgell & Simpson herd and see if some of these good things would not add to your herd. See page 26 for the last announcement before the sale.

**LAST CALL FOR THE CONNER & COCKRAN DISPERSION SALE.**

With this issue we call the attention of our readers for the last time to the dispersion sale of Messrs. M. T. Conner & S. J. Cockran, to be held at Auburn, Neb., on April 30th. On this date they will sell their entire herds of richly-bred Short-horns to the highest bidder. Mr. Conner is consigning twenty head of Scotch and Scotch-topped animals. Among them are cows of as choice breeding as is known to a Short-horn pedigree. The great herd bull, Gloster Prince 231899, will be included in this sale, and we consider him one of the good bulls of the breed. He is a son of the great Prince Gloster, a red bull of the celebrated Duchess of Gloster family and a ton bull. His dam was Red Beauty, got by Earl of March, belonging to the great prize-winning English Lady tribe. Red Beauty sold for \$1,200 in Mr. W. C. Edwards' sale in Chicago on June 12, 1902. Among the she stuff are twelve good cows of breeding age and five of these will have calves at foot on sale day. Six good heifers will be offered, mostly the get of the great Gloster Prince. The most ardent admirer of true Short-horn character will find

in this sale females that will please him. Their usefulness as producers will be fully demonstrated by their produce in the sale, both in animals of breeding ages, as well as the calves to be sold at foot. The men who want milking Short-horns will find them here, as they are bred from milking strains. Among the best of the cows will be Sparswood Mary of Londondale, a massive red cow by Velasco and tracing to Imp. Young Mary. She has proven herself one of the most profitable cows ever owned on this farm and will be sold with calf at foot by Gloster Prince. There are several cows in this offering that should go to extra good herds, as they are extra good both as breeders and individuals. In the offering put in by Mr. Cockran we find some as choicely-bred Bates cattle as will be sold in one sale this year. In buying this breeding stock Mr. Cockran spared neither time nor money in getting the very best that he could find, but now owing to his bad health he has decided to close out the entire herd. The first thing we will call your attention to is the great herd bull, Airdrie's Waterloo Duke 253512, got by Airdrie's Sharon Duke and having for his dam Water Girl 5th, tracing to Imp. Water Girl. This great bull should be appreciated for his individual excellence, his rich pedigree and most of all his ability to sire high-class stock. The man who buys him has little to fear, as he is a breeding bull absolutely sure and sells under that kind of a guarantee. In the female end of the offering there is also found stock that have been great money makers for Mr. Cockran. Such an offering of Bates-bred cattle is seldom found in one sale. Several of the best females will be sold with calves at foot and the balance that are of breeding age will be safe in calf to their herd bull, Airdrie's Waterloo Duke. Among the most attractive cows is Flora Cruickshank 2d got by the great Rosebud Prince and having for her dam Flora Cruickshank, tracing to the great Imp. Rose of Sharon. Mention of a great many of these might be made, as they are individually good and are great producers. There is not an old and worn-out cow in the offering, but on the contrary are mostly young and coming into their most useful age. This is a consideration that should have much weight with the prospective buyer and he should also remember that it is only in dispersion sales that the seller lets go of the good ones. Catalogs are now ready and should be in the hands of every interested breeder. Write for a catalog and mention The Homestead.

**UNUSUAL OFFER OF A WORLD-FAMOUS MANUFACTURER.**

How mother earth is made to do your weekly wash. You can now have your washing done by gravity power, for a washing machine has been invented which actually makes the rotation of the earth on its axis do all the hard work of the weekly wash. The machine is very simple in construction, very easy in operation and very wonderful in results. After the dirty clothes are put in the tub of the machine and covered with hot suds, all that is needed to start the work of washing is a slight push of the hand. The strength of a small child would be far more than enough to set the machine-

ery in motion. And, once started, the washer is easily kept going by slight pushes and pulls with your hand. The machine oscillates slightly and you exert but very little strength, because the earth power—gravity—does all the hard work. You can sit down to do your part, if you prefer. This wonderful machine is rightly called "a gravity washer," because gravity does practically all your washing. This Gravity Washer is made only by the world-famous 1900 Washer Company, of Binghamton, N. Y., who have patented the machine. And to show you the wonderful work this machine will do, the makers offer to send a Gravity Washer to any responsible party, for a month's free trial. You need not send them any money in advance—make any deposits—or sign any bonds. All you have to do to obtain the proof that you can be rid of wash-day worry and wash-day work forever and ever is, write the 1900 Washer Company that

sold at auction this year. His ancestry cannot be improved and it is doubtful if a better individual will be offered at auction this year. The females in this consignment are equally as good as the bulls. Mr. Wm. G. Mullet, of Ottawa, Ohio, lists a strong lot of well-bred stuff, representing the most fashionable families of the breed. Messrs. C. F. Fleming & Sons, have listed some of the best of their herd affords, representing the get of some of the most popular bulls of the breed and from females that are superior in point of breeding and individuality. Judge John S. Goodwin, consigns a daughter of the noted Prince Ito in Blackcap Ito. She is in calf to Black Mark Twain, a double Blackbird bull at the head of his famous Heather-ton herd. Another of the features of his consignment is Imp. Epaullet, a double Erica. She is a grand good cow and Judge Goodwin is keeping a heifer out of this cow for permanent use in his herd. This cow is safe in calf to Black Mark Twain, the bull mentioned above. Mr. Stanley R. Pierce contributes an attractive lot of young bulls that for individual merit and breeding cannot be excelled. Four Blackbirds, one Pride and an Erica make up the lot. The breeder in search of a herd bull will find what he wants in this lot. Few better bulls are found in any sale. Messrs. McLachlan Bros. & Johnson, of Estill, Mo.; Mahoney Bros., of Le Roy, Minn., and J. D. Wisely, of Fayette, Mo., are among the other contributors. Of the eighty head cataloged fifty-five are cows and heifers and twenty-five are bulls. These cattle have been carefully selected as to quality and breeding. The large number consigned to one day's sale assures many bargains. Many of the females have calves at foot, while others are due to calve shortly after sale day to the service of noted bulls. The bull consignment is a notable one, and the breeder in search of a herd bull will find in this sale a superior lot to select from. Mr. Judy has held many successful sales, owing to the fact that he has selected good, useful cattle. Such is the case with this offering and Homestead readers will find it to their advantage to be present on Wednesday of next week. Write for catalog as per the announcement on page 24 of this issue, kindly mentioning The Homestead.

# GLENFOYLE SHORT-HORNS

## AT AUCTION

**75** Glenfoyle Farm, Marshall, Mich., Wednesday, May 8 **75**  
SEVENTY-FIVE HEAD OF IMPORTED AND HOME-BRED SCOTCH  
AND SCOTCH TOPPED SHORT-HORNS.

Sixty-five head of choicely bred cows and heifers, twenty-five with calves at foot and many others due to calve shortly after sale day. **EVERY FEMALE IN THE OFFERING OF BREEDING AGE EITHER HAS CALF AT SIDE, OR IS SAFE IN CALF.**

It is the best lot of cattle ever sold from the noted Glenfoyle Herd. It surpasses any sale held in recent years in the number of large cows listed of **Scale, Substance, Character and Smoothness.** More Scotch Short-horns are listed than in any sale of recent years.

The bull offering is the best yet made from Glenfoyle, and includes two of the herd bulls, **Imp. Pennan Commander 211984** and **Village Sultan 260235**, one of the best sons of the Champion **Whitehall Sultan**. This young bull is fit to head any herd in America. There are a number of young bulls of herd header type.

This offering from Glenfoyle Herd is one of the strongest of the year and the large number of Scotch cattle offered should attract the attention of the Short-horn breeders throughout the entire country.

Catalogs are now ready and will be sent to all who mention this paper when writing.

## A. CHRYSTAL, MARSHALL, MICH.

Cols. Woods, Bellows, Jones and Cottingham, Auctioneers.

Herefords, Short-horns and Angus at  
Omaha, May 1st, 2nd and 3rd—  
Last Call.

Fifty-two Herefords are cataloged for the McGavock auction at South Omaha, Neb., May 1st. Mr. S. R. Waters, of Poplar Bluff, Mo., consigns one bull and fifteen cows and heifers; Mr. H. J. Stinger, of Allen, Neb., four bulls and ten cows and heifers; Mr. T. A. Reece, of Savannah, Mo., four bulls; Mr. Warren Landers, of Savannah, Mo., two bulls; Mr. J. R. Owens, of Savannah, Mo., one bull; Mr. Andrew Tanning, of Newman Grove, Neb., one bull; Mr. Ernest Draheim, of Emerson, Iowa, one bull and two cows and heifers; Mr. G. J. Greenwell, of Shelby, Mo., two bulls; Messrs. W. & T. G. Roberts, of Dearborn, Mo., four bulls, and Messrs. A. B. Bruer & Sons, Pontiac, Ill., five bulls. Included are quite a number of tested sires, Mr. Waters consigning the three-year-old Beau Monarch, one of the best-bred bulls that will be offered at auction this season. He is an intensely-bred Anxiety 4th, being sired by Beau Donald 33d and out of a dam by Anxiety Monarch. The fifteen cows and heifers consigned by Mr. Waters represent the type that he has established a reputation for breeding. Mr. Stinger includes the four-year-old bull, Donegal by Cadillac, one of the best sons of Corrector, and he also catalogs sons and daughters of this bull and cows and heifers in calf to and with calves at foot by him. There are also cataloged several high-class young bulls from the herds of breeders above mentioned. The offering throughout represents one of the best collections of the breed that has been or will be offered this spring. Recent western sales indicate that Herefords are inclined upwards in price and those who invest now will be sure to invest at a time when big profits can be made. Sixty-five Short-horns, consisting of twenty bulls and forty-five cows and heifers, will be sold in the McGavock auction at South Omaha, May 2d. It is the largest offering of the breed that has been or will be made at this great sale center this season and probably contains more animals that are useful and attractive alike to the breeders and farmers and ranchmen than any auction of the breed that has recently been held at South Omaha. The cattle are consigned from both eastern and western herds and the get of a half dozen or so of the most famous imported bulls are cataloged. Among the herd-heading bulls may be mentioned the Marr Missile bull, Emperor, sired by Imp. Emperor, a prize winner and sire of International Exposition prize winners. Mr. H. G. Bowers, of Elmwood, Ill., catalogs the Duchess of Gloster youngster, Roan Emperor by Imp. Emperor. Statesman, consigned by Mr. A. C. Huidekoper, of Meadville, Pa., has several of his get included in the auction. He is a four-year-old, a beautiful red, sired by the celebrated bull, Imp. Avalanche. There are also other straight Scotch bulls good enough to head herds, and Mr. Huidekoper's consignment of twenty-one head is one-third Scotch. Imported bulls are represented by their get in the consignment of Mr. E. W. Cockrell, of Horace, Ind., who

is sending nine head to the auction, including the straight Scotch cow, Verbena 4th, whose grandam was imported from the herd of Mr. Cruickshank. The straight Scotch bulls, Imp. Palermo, Imp. Silver Victor and Imp. Courier of Cluny are represented by the best of their get in Mr. Cockrell's consignment. Messrs. Fremont Watts & Son, of North Platte, Neb., sell six high-class females, including the straight Scotch Lavender heifer, Queen of Scots. Messrs. H. Smith & Sons, of Tobias, Neb., consign one straight Scotch bull; Mr. Robert Volker, of Johnson, Neb., five bulls and eleven cows and heifers; Mr. Geo. H. Mahr, of Corning, Iowa, one bull; Mr. O. E. Osborn, of Weston, Iowa, three bulls and two cows and heifers; Mr. Geo. C. Hebron, of Strawberry Point, Iowa, one bull, and Mr. J. O. Trine, of Madison, Neb., three bulls. Thirty-six bulls and twenty-three cows are consigned to the McGavock Angus auction at Omaha, May 3d. Mr. W. A. McHenry, of Denison, Iowa, will sell ten bulls and seven cows and heifers. Four Blackbird bulls are Blackbird Bruce, a long yearling got by the Pride bull, Imp. Prince of Seaford, whose sire, Portman of Aberlour, is one of the great bulls of Scotland; Blackbird Sir, another long yearling, is also by an imported Pride bull, Proteros. His dam, Blackbird of Denison 26th, was by Baltimore of Glendale and out of Blackbird of Burlington 6th by the famous Black Knight. Another Blackcap is Blackbird Bob, sired by Imp. Prince of Seaford and out of a dam by Imp. Proteros. Blackbird Duro was got by Imp. Proteros and his dam, Blackbird McHenry 48th, was by the champion sire, McHenry Blackbird, and her dam, Blackbird of Woodland 10th, was the daughter of Imp. Entwistle that Mr. McHenry gave \$1,000 for in the Estill dispersion. These four Blackbird bulls furnish great herd-heading material. The double Trojan Erica Elchi, sired by Imp. Eliminator of Ballindalloch, is of the real herd-heading sort. Two Pride bulls, Proud Chief and Proud Provo, are got by Imp. Eliminator of Ballindalloch and Imp. Proteros, and two young Pride cows, bred in the purple, are also cataloged. His Queen Mothers are represented by two good bulls, and his famous Barbara family includes a two-year-old daughter of the celebrated champion, Barbara McHenry 13th. In Coquette McHenry 4th Mr. McHenry offers one of the greatest of breeding cows, her produce having won repeatedly at the best fairs and shows of this country. A son and daughter of this cow are also cataloged. Mr. C. J. Off, of Peoria, Ill., includes animals of the most fashionable breeding and half brothers and sisters to the famous prize winners he is producing. Mr. Geo. Kitchen, Jr., of Gower, Mo., sells the prize-winning bull, Intensified, one of the best show bulls of the country, and he also includes a daughter of the great Gay Blackbird. Mr. J. B. Withers, of Missouri City, Mo., catalogs highly-bred sons of the great bull, Erolline's Rosegay. Mr. Omer Catterson, of Maryville, Mo., is selling prize winners of last year, belonging to the Queen Mother family. It is a strictly choice offering of females, as well as bulls, that he will present. A full list of consignors will be found in the advertisement and the catalog of the three sales will be mailed on application to Mr. W. C. Mc-

Gavock, of Springfield, Ill. Mention The Homestead when requesting catalog.

S. R. Murphy and G. T. Edwards' Durocs.

A representative of this paper recently called on Mr. S. R. Murphy, of Savannah, Mo. (of Savannah Belle fame), and Mr. G. T. Edwards, a neighbor of Mr. Murphy's, who is engaging in the breeding of the Duroc Jersey. Both gentlemen have some extremely good prospects for the fall trade. At Mr. Murphy's we found Savannah Belle raising a fine litter of Ohio Chief pigs, two boars and five sows. These are full brothers and sisters to the \$2,000 Ohio Belle that sold in Mr. Murphy's February sale. Dolly Advance, a Proud Advance sow, is raising six sows and two boars that were got by Ohio Chief 2d. Belta Advance, another Proud Advance sow, was raising nine that were got by Orion Chief I Am. Mr. Murphy has several other litters of which mention will be made later. At Mr. Edwards' we found a Prince Lad sow raising six sows and two boars that were got by Ohio Chief Agala, a litter brother to the \$2,000 Ohio Belle. Here is a litter to which breeders may look for something good. Belle Murphy, a Perfect-

tion Chief sow, was also raising a litter of eight by Belle's Chief I Am. Lena Orion out of Lady Rival by the same sire as the great Helen Blazes 3d, was raising a litter of ten that were got by I Am Crimson by Crimson Wonder I Am. Mr. Murphy and Mr. Edwards will make a sale this fall. November 4th is the date and as both herds are bred along the same lines they will be able to put up an attractive offering.

Mathews Bros.' O. I. C's.

Messrs. Mathews Bros., of Grant City, Mo., are rapidly forging to the front as breeders of high-class O. I. C. swine. The great O. I. C. boar, White Oak, recently purchased by these gentlemen, was seen on our recent trip to the herd. He is all and more than he had been represented. In some future issue more will be said of White Oak. Some extra fine pigs were seen and of these we shall have more to say as the season advances. Just now Messrs. Mathews Bros. have only some fall males to offer. These are rich in the blood of Kerr Dick, some by Kerr Walter, a litter mate to Kerr Garnett, the grand champion of the American Royal in 1906, that sold for \$625.

..... COMBINATION SALE .....

# 80 - HIGH-CLASS - 80 ABERDEEN ANGUS CATTLE

TO BE SOLD

Wednesday, May 1, '07, at Union Stock Yard Pavilion, Chicago, Ill.

25 BULLS AND 55 COWS AND HEIFERS

The grandest lot of high-class cattle ever sold in Chicago for years—cattle from the leading herds of the country, where money was no object in buying the best. All the most fashionable families represented, Blackbird, Erica, Pride, Queen Mother, Heather Bloom, Drumin Lucy and other popular families. There are many animals in this consignment with splendid show yard records; bulls fit to head any herd in America; bulls that will sire market toppers; cows with calves at foot, and many will calve soon after sale; cows that have sold heretofore for more than four figures; heifers for the showman who wants something to add credit to his herd. This lot of cattle has been carefully selected as to quality and breeding. The consignment will please the old breeder, the young breeder, the new beginner and the ranchman who wants a carload of top-notch bulls. Remember I do not sell anything but the best. Remember the time and place. We want all lovers of good cattle to be there on sale day. Send for catalog. Mention The Homestead.

Auctioneers, Col. Silas Igo, Col. F. M. Reed and Col. C. C. Plumley.

### Glenfoyle Short-horn Sale.

The forthcoming sale of a draft of nearly 100 head from the noted Glenfoyle herd of Short-horns, the property of Mr. A. Chrystal, of Marshall, Mich., is an event of national importance to the Short-horn fraternity. More Scotch cattle are included in this sale than any Short-horn event of recent years. The female consignment, to which we wish to call particular attention in this issue, is the strongest ever sent forward from Glenfoyle. Those of our readers who are interested in good Short-horns are familiar with the fact that no ordinary offering has ever been sold from this herd. Mr. Chrystal is a man who believes in offering the class of cattle which will please discriminating breeders. He has taken from his herd for this occasion cattle which he cannot replace at the prices which they will bring, but he is firm in the belief and rightly, too, that the breeder in the market for good, well-bred cattle will appreciate this offering. A Homestead representative recently inspected the entire offering and is pleased to recommend it to buyers who are in the market for good Short-horns. Glenfoyle herd has always been noted for the females with scale, substance, character and smoothness. This offering is of that character. It is not a lot of cattle gathered for speculation, but have been selected from the herd and many of them represent the best the herd contains. Glenfoyle herd is one of the largest in the United States and those present sale day will not be disappointed with the cattle which have been selected for this occasion. In calling attention to the female consignment we wish to emphasize the fact that every female cataloged of breeding age either has calf at side or is safe in calf, and in some cases cows are selling with calves at side and are bred again to the noted bulls in service in this herd. In this connection a few words about the sires in use at Glenfoyle would be appropriate. Imp. Bapton Magnet is a richly-bred Cruickshank by Silver Plate, one of the greatest sires known to the breed. Imp. Bapton Magnet is undoubtedly one of the richest-bred bulls on this continent, and individually is in keeping with his breeding. Many of the calves sold with dams in this sale are sired by him, and a large number of females in the offering are safe in calf to him. Imp. Pennan Commander (included in the sale) is another of the good bulls to which many of the females are bred, while others sell with calves at side sired by him. His calves show a remarkable depth of body and are smooth and evenly fleshed. He is a bull of great scale and thickness, with unusual depth and smoothness. Many of the get of Imp. Pennan Commander will be sold on sale day and a large number of the cows are safe in calf to him. Another bull to which many of the cows are safe in calf is Village Sultan, also included in the offering. It is doubtful if there is a better individual to go through the sale rings this year. A number of very good cows are in calf to him and we defer further mention of this noted son of the champion Whitehall Sultan until our next issue. The very best Scotch families are represented in this offering. Imp. Cherry Blossom 4th is a Cruickshank Orange Blossom by Silttyton Prince. This cow has

been one of the most valuable breeding cows in the herd producing a good calf each year, one of her daughters by Imp. Beaufort Victor going to Mr. F. W. Harding for \$585 and a nine months heifer going to Mr. J. G. Withers, of Milford, all at a long figure. This cow is a magnificent specimen of the true Scotch type and possesses that scale, smoothness and character which are in demand by best breeders. She is well along in calf to Imp. Pennan Commander. One of the attractions of the offering is the beautiful white cow, Maria's Heiress 3d, a daughter of the Dustin-bred bull, Scottish Victor, and out of Imp. Maria's Heiress by Marengo, the most noted show and breeding bull of his time in England. This cow is a full sister to Maria's Heiress 2d which sold in Mr. Chrystal's last sale at a long price to Mr. F. O. Lowdeo. Maria's Heiress 3d is distinctly of show-yard type, with an ideal head, is large and roomy with the smoothness and substance that always attract attention. Her roan bull calf by Imp. Lovat Champion sells with her. He was dropped in December and is of the herd header sort. Such a pair as this are seldom found in any sale ring and will certainly attract attention of those present sale day. Imp. Flower Girl 11th and white heifer calf at side by Imp. Beaufort Victor is one of the top things of the offering. She is a large, roomy cow, thick and smooth, with great spring of rib and level lines; has been one of the best producers in the herd. Her breeding is a combination of much of the good blood of Bruce, Marr, Duthie, Cruickshank and other noted Scotch breeders. She was got by Imp. Knuckle Duster and her dam was Flower Girl 9th by Scottish Victor. In addition to having a beautiful heifer calf at foot, this cow is bred again to Imp. Pennan Commander. Imp. Golden Chain is a Brawith Bud bred by Mr. J. Deane Willis, and is a daughter of the noted breeding and show bull, Silver Plate. Daughters of this noted bull are scarce in this country and Golden Chain is good enough individually to go into the best herds. She is safe in calf to Imp. Bapton Magnet. This cross should produce something good, as no stronger pedigrees are found in the herd books than are to be had in these two individuals. Matchless of Mapleton is a show cow in every respect, got by the Campbell-bred bull, Imp. Masterpiece, and out of Matchless 23d by Imp. Royal Sailor, a richly-bred Marr bull. She is a very smooth, deep, evenly-balanced cow with an excellent bull calf at foot by Imp. Pennan Commander of the herd header sort. Matchless of Mapleton has been an unusually good milker and will do well in any herd. Imp. Cassandra and beautiful roan heifer side by Imp. Bapton Magnet are a pair worthy the attention of buyers in search of good cattle. She has the thickness, depth and smoothness that are found in the best Scotch cattle. A show heifer of much promise is found in Village Girl, a daughter of Commodore Dewey, a noted Scotch bull of Canada. She is a particularly well-finished, evenly-balanced heifer, having beautiful character about the head and is nicely covered over top, with good, level loins. She is safe in calf to Imp. Pennan Commander. Imp. Gipsy Queen is a roan cow of great scale and thickness. She is in calf to Imp.

Bapton Magnet and will be a valuable addition to some good herd. She is in splendid breeding condition and is not overladen with fat. Crimson Flower of Glenfoyle has proven one of the best producing cows in the herd. She has a roan heifer calf at foot by Imp. Pennan Commander and is one of the good things of the offering, both in point of breeding and individual merit. She is a daughter of Imp. Scotch Fame and an examination of her pedigree reveals such noted bulls as Imp. Scottish Pride and Imp. Guardsman, both richly-bred Cruickshank breeding and show bulls. Ury Girl 4th out of Imp. Ury of Greenwood is a daughter of Imp. Royal Member, a grandly-bred Cruickshank Nonparell used with much success by Messrs. H. Cargill & Son. She is a good producer, her bull calf, Ury Champion by Imp. Lovat Champion, being one of the best young bulls in the sale. She is well along in calf to Village Sultan, one of the best sons of the champion, Whitehall Sultan. Maisie 4th is a Bruce Mayflower and is one of the richest-bred cows in the offering. Her yearling calf, Maisie 6th, is also included in the sale. Maisie 4th has the scale, smoothness, character and quality so much desired in breeding matrons. She is safe in calf to Imp. Bapton Magnet. We have briefly mentioned a few of the females included in this noted sale. There are more Scotch cattle included in this sale than in any of recent years. Mr. Chrystal has a producing herd. The large number of calves sold with their dams in this offering is ample proof of the value of these cows as breeding matrons. The Scotch-topped sorts, of which only a small part of the consignment is made up, have for generations been topped off with noted Scotch sires, and are individually of the correct type and have proven good producers. Many animals are included in this sale, notably the Scotch sorts, which will sell for less in this sale than in any other. The large number cataloged assures buyers of many bargains. Mr. Chrystal is located a little out of the live stock center and for this reason many cattle in previous auctions have sold well worth the money. The bull consignment is in keeping with the excellence of the offering and particulars regarding same will appear in our next issue. Mr. Chrystal has been one of the most ardent supporters of the breed. He has been a liberal bidder on the better class of cattle offered for sale at public auction and will continue to be. He is deserving of the patronage of Short-horn breeders throughout the entire country and his forthcoming sale on Wednesday, May 8th, is and should be recognized as an event of national importance. Catalogs will be sent to all who write for same as per the announcement on page 23 of this issue. Kindly mention this paper when writing. Marshall, Mich., is on the main line of the Michigan Central railroad, 178 miles east of Chicago. Parties from the west can leave Chicago the night before the sale at 11:55 p. m. or 3 a. m. Plan to be present sale day.

### Kater & Smith's Herefords.

A commissioner of this paper last week spent a day visiting the herd of Hereford cattle owned by Messrs. Kater & Smith, of

Grant City, Mo. Mr. C. F. Kater, the senior member of this firm, established the present herd about fifteen years ago, at which time five cows were purchased. From time to time a few more good cows were added and the best herd bulls procurable were used, the best heifers retained, and later Mr. J. H. Smith, whose address is Worth, Mo. (a neighboring station to Grant City), became interested with Mr. Kater. Both gentlemen are lovers of a good beast and strive to make their herd better each year. As a result they today have a representative working herd of 175 head and a herd that should and will command the attention of all who are interested in the "whiteface." Individuality has been their guiding star and during our visit there many animals were seen that would make a creditable show in any of the big shows. Three herd bulls were found in service. The senior one of these and a bull that has given much satisfaction, is St. Elmo 13th 92074, a son of St. Elmo and out of a cow strong in the blood of Anxiety. St. Elmo 13th is one of those easy-keeping bulls with wonderful covering over loin, is good through the heart, has two extremely good ends and all set on four good, stout legs of the proper length. A great many of his get were seen and they have the quality of their sire and are uniform. For use on the get of St. Elmo 13th and to assist him in the herd, Keep On 23d 12151, one of the best sons of Imp. Keep On and out of a Beau Real cow, was secured from the herd of Mr. C. A. Stannard. Keep On 23d in breeding form tips the beam at 2,300 pounds, has as good a back as is found on an animal of any breed. He is an extremely well-quartered bull, carrying the thickness of rump so much sought after. Through the heart he is good and a better head is seldom seen. Messrs. Kater & Smith have used these bulls for seven and four years respectively and their get warrant the continuation. Trot On, a son of Keep On 23d and out of a cow by the Anxiety-bred bull, Jerry Lad, is being used on a few heifers. The herd shows that great care is and has been used in the matings and the entire herd is one of the well-kept ones of the country. Just now Messrs. Kater & Smith have on hand one of the strongest lots of bulls the writer has seen this year. One lot of twenty head that range from twenty to twenty-four months of age are bulls from which some extra good herd bull material could be selected, but the entire lot are being offered as car load of range bulls. They are in fine condition, big and strong, and not a cull in the bunch. The man hunting a load of range bulls that have quality will make no mistake in going to see these. A fine lot of younger bulls just rounding into yearlings were also gone over and some high-class herd bull material was also found among these. Messrs. Kater & Smith have always sent as good a lot of bulls to the ranges as have gone there, and among them were some that should have gone to good breeding herds. In future issues more will be said of the Kater & Smith herd. Just now we want bull buyers to look after these bulls. They are the kind we are pleased to recommend. See page 22 for the advertisement of this breeding firm and when writing or visiting them kindly mention this paper.

# OMAHA'S GREATEST AUCTION of the SEASON

**175** High Class Herefords, Short-horns and Aberdeen Angus  
TO BE SOLD AT SOUTH OMAHA, NEB.,

GREAT DISPERSION SALE OF  
SHORT-HORNS

..... To Be Sold At .....  
AUBURN, NEBRASKA

APRIL 30, 1907

40 HEAD of Scotch and  
Bates Bred Cattle 40

Included in this sale will be great herd bulls. Mr.  
M. T. Connor consigns 20 head of cows and heifers, most  
of them safe in calf or with calf at foot by his great  
bull, GLOSTER PRINCE 231899 by PRINCE GLOSTER,  
a red Scotch bull of Mr. Cruickshank's celebrated Duch-  
ess of Gloster family. Mr. S. J. Cockran will consign 20  
head of Bates-bred cattle, including the great herd bull,  
AIRDRIE'S WATERLOO DUKE 253512, got by AIR-  
DRIE'S SHARON DUKE, dam Water Girl, tracing to  
Imp. Water Girl. Four of these great cows will have  
calf at foot and the balance are all bred and safe in calf  
to AIRDRIE'S WATERLOO DUKE. This will be a great  
opportunity to buy good, useful Short-horns. They are  
from great milking strains and have great size and qual-  
ity. Write these gentlemen for a catalog and then ar-  
range to attend the sale, as it will be of interest to you.  
Free entertainment at the Byers House.

M. T. CONNOR, S. J. COCKRAN, PROPS.,  
AUBURN, NEBRASKA.  
In Writing for Catalog Address Either  
of the Above Gentlemen.  
COL. GEO. P. BELLOW, AUCTIONEER.

SHORT-HORN CATTLE.

9 Cruickshank  
Short-horn Bulls

For Sale

S. H. THOMPSON'S SONS,  
IOWA CITY, IOWA.

We offer for sale until sold nine Cruickshank  
red bulls from 13 to 24 months old, two Victorias,  
one Miss Ramsden, one Princess Royal, one Mysie,  
one Violet, one Lavender and two Beauties. One  
of the Beauties is a bull that we have been us-  
ing at the head of the herd. These are all very  
low, thick, heavy-quartered bulls. A number of  
herd headers among them. Their breeding cannot  
be excelled, and our prices are below competition  
for bulls of this character. Telephone from Iowa  
City to the farm. Mention The Homestead when  
writing.

H. D. PARSONS, - NEWTON OR BAXTER, IOWA

## HORSES.

## OUT OF THE RING BUT STILL IN THE LEAD

We have been ruled out of the International Fat Stock Show ring in Chicago, and disbarred from the association privileges for one year.

BECAUSE we refused to submit to the decision of one judge, knowing that he, however honest and capable he might be, was selected solely by our only would-be competitor, we being refused another judge to act with this one, drastic action was taken by the superintendent of the horse department, barring us from showing, not only in the German Coach classes, but also in the Belgian and Percheron classes, in which we had several entries, and well prepared for the battle. It is currently reported among horsemen who are on the "inside," that the measures adopted to deprive us of a fair showing grew out of plain jealousy by an envious breeder. However true this may be, we have reasons to suspect that the generally recognized merits of the Oltmanns breedings and importations have created an uneasiness in certain quarters. In fact, we know of more than one preconcerted effort to gain from us by unfair means, that which cannot be fairly gained. In the show world we stand without fear of successful competition.

The individually given each one of our animals places them in a class by themselves. In our breeding stables, both in Germany and America, every effort is made and with unvarying success too, to bring out most prominently those qualities of equine flesh that have given fame to the German Coach Horse and won for them a high place. On two continents the name we carry stands for excellence, in horse flesh. We are proud of our record as breeders and importers of German Coach as well as Percherons and Belgian breeds. Our buying facilities are unsurpassed. The senior member of our firm, Lunsdchaffert O. V. Oltmanns, resides in the German Coach Horse district, and within four hours ride of the Percheron and Belgian Horse district of France and Belgium, and is ever on the lookout for the finest and best the old country produces. We buy better horses at less expense than any other importer can possibly do, and for that reason can give you a better horse for less money than you can buy elsewhere. Write us for full particulars or call at our barns at Watseka, Ill., or Ft. Worth, Tex. Though ruled out of the ring we are still in the lead.

OLTMANN'S BROS., Leer, Germany, Ft. Worth, Texas, Watseka, Illinois.

## Rhea Bros., Arlington, Neb.

Breeders of Percheron Stallions. We exhibited 11 stallions at late Nebraska State Fair and won 9 prizes as follows: 2d and 4th on four year-olds, 1st on three year-olds, 2d, 3d and 4th on 2 year-olds and 1st, 2d and 3d on yearlings. At Interstate Fair at Sioux City, Ia., we had 7 entries and got 5 places, 2d on 4 year-olds, 1st and 3d on 3 year-olds, 2d on 2 year-olds, 1st on yearlings. Our horses are home bred and acclimated, have size, bone, quality, are raised in pastures, not pampered with grain and drugs, thus insuring good service from the start. Every stallion sold under a positive breeding guarantee. Arlington is on main line N. W. Ry., 25 miles northwest of Omaha, eight miles east of Fremont.

## M. L. AYERS - SHENANDOAH, IOWA.

Importer and Breeder of

## PERCHERON HORSES

HORSES, Best Home-Bred Registered Percheron and English Shire stallions at \$250 to \$500 at my stable doors. W. H. Schuele, Lemonville, Mo.

## HORSES.

## FRANK IAMS

has opened FOR SALE a "new barn" full of his "PEACHES AND CREAM" Percheron and Belgian stallions, (NOT SEEN BY BUYERS BEFORE.) They are his "FAMOUS PRIZE WINNERS" that you ALL saw at the Ill., Iowa and Neb., 1906, state fairs and his "TOP NOTCHERS" bought for the "1907 HORSE SHOWS." "Shy Ann, get into 'IAMS' BAND WAGON," all RAILROADS lead to ST. PAUL, NEB., (at 2 cents a mile.) Have a look and you will buy one of IAMS.

## 40 Percheron and Belgian Show Stallions 40

Among them are the FIRST PRIZE and SWEEPSTAKES PERCHERON and BELGIAN at 1906 Neb. state fair. The SECOND PRIZE WINNING four-year-old black Percheron stallion at 1906 Ill. STATE FAIR. The "HIGH FIVE" coming four-year-old Percheron stallions that won the "LION'S SHARE" of prizes at Ill., Iowa and Neb., 1906 state fairs. The first prize winning coming three-year-old black Percheron, wt. now 2080 lbs., and many others. IAMS' "1907 SHOW STALLIONS" are the "BEST EVER" WINNERS and SONS OF WINNERS in FRANCE and BELGIUM. They are three to

six years old, wt. 1,800 to 2,500 lbs. Ninety per cent blacks. Seventy-five per cent TON HORSES. ALL IMPORTED and STAMPED. DAD—IAMS' stallions are SO GOOD they need not be "peddled" or put on the "auction block" to be sold, to get your cash business QUICK. IAMS will sell you CHOICE of ALL his stallions at from

\$1,000 TO \$1,500

(BAR TWO). All his stallions must be sold. His selling clothes fit ALL buyers. No man with money or bankable notes gets away from Iams. He buys, owns and sells more stallions than any man in U. S.; saves THOUSANDS OF DOLLARS to STALLION BUYERS. He is not in the stallion trust. Iams places \$1,000 or \$1,500 insurance.

\$1,000 — SAVED AT IAMS — \$1,000

Ikey, what a rich graft these "SLICK STALLION SALESMEN" are working on the honest farmer, selling fourth-rate stallions at \$2,000 and \$5,000. Mr. Buyer, see Iams' stallions yourself. Take no "GOLD BRICK STALLION SALESMAN'S WORD." Iams has "THE GOODS." His establishment is worth going 2,000 miles to see. He is knocking "high prices" out of the "Xmas tree." Iams "butts in" sells more stallions each year. George, dear! buy a stallion of Iams. His \$1,200 stallions are MUCH BETTER than our neighbors paid those Ohio men \$4,000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from BREEDERS, pays no BUYERS, SALESMEN or interpreters, has no two to ten men as partners to divide profits with. Iams guarantees to sell a better stallion at \$1,000 to \$1,500 than are sold to Stock Companies for \$2,500 to \$5,000 by SLICK SALESMEN or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. REFERENCES: St. Paul State Bank and Citizens National Bank.

## ST. PAUL, - NEBRASKA

## TAYLOR &amp; JONES'

New Importation

ARRIVED MARCH 9TH.

Our barns are now filled with imported and home-bred PERCHERON, SHIRE and BELGIAN STALLIONS. Don't you know that PUBLIC SALES of stallions only indicate a cheap lot of trash, or that the sellers are men who CAN'T DO A BARN BUSINESS? Did you ever know a merchant to sell groceries at auction? Would you buy a gold watch at auction? We use no slick salesmen to sell our horses. They are good enough and our reputation so clean that we are selling more horses than ever before, which proves our prices are the lowest, our horses the best and our manner of doing business is satisfactory to our patrons. For catalog address,

## TAYLOR &amp; JONES,

BOX 68,

WILLIAMSVILLE, - ILLINOIS.

PUBLIC SALE OF SHORT-HORNS, JUNE 4, 1907.

## PINE RIDGE STOCK FARM

Has the biggest and best barn in the United States and it contains the BIGGEST and BEST lot of Percheron and French Draft Horses.

The last chance to obtain a colt by SAMSON 27238, as his last colts are now yearlings. Over 150 head of horses showing more bone, size and quality than any similar number in America. TAVERNIER P. 35719 and F. D. 12610 now at head of the stud. Prices below competition.

Born at Moose Jaw, Sask., Can., in charge of E. F. Muxey.

L. M. HARTLEY, SALEM, IOWA.

## PERCHERONS FOR SALE.

IMPORTED and home bred stallions and mares one to seven years old; several match teams of mares. All stock registered in Percheron Society of America record. New importation arrived Oct. 10. Munsam & Wheeler, - Fairfield, Iowa

## FOR SALE AT A BARGAIN

KING WILLIAM 12782.

Registered French Draft Stallion. Foaled June 1899, weight 1,800; also a Shire stallion 4 years old, weight 1,700. W. A. JOHNSTON, Prairie City, Iowa

When writing please mention this paper.

VOL. LII. NO. 18.

DES MOINES, IOWA, MAY 2, 1907

WHOLE NO. 2598

### SOME HINTS ON PIG RAISING.

Pig raising in the minds of many persons is a hit-and-miss affair. Men expect "bad luck" at intervals. Our attention has recently been called to an instance where an extensive farmer raised only fifty pigs from the first fifty sows that farrowed, and yet, on the other hand, it is not difficult to find instances where a large bunch of sows have raised seven, eight and nine pigs on an average.

When a man loses his pigs in a wholesale way, is it a matter of bad luck or bad management? In our opinion it is the latter or, rather, mismanagement. It is too late to give advice now on handling the sow previous to farrowing, but it is not too late to drop a few hints that will help out the man who has succeeded in saving a nice average.

The matter of first importance is that of keeping a comparatively small number of young pigs together. We have found from experience that two sows may be put together when their pigs are two or three weeks old, without running any risk of the pigs "stealing" and thereby runting. An outlay of \$15 or \$20 will fence a half acre lot, and more than this can be saved on the first bunch of pigs raised, providing, of course, that the sows average seven or eight each. When the herd is divided up in this way and the old sows are fed all the good rich slop that they will eat during the first two or three months after they farrow, the largest and most economical gains will be made on the young pigs that is possible during their career. It is not unreasonable to expect a good milking sow, when handled in this way, to make her pigs weigh thirty, forty or even fifty pounds by weaning time, but it cannot be done where large numbers are run together.

We do not deny that there is profit in raising pigs the other way, that is, by letting the sows all run together and allowing the little pigs to take their chances as they find them, but, on the other hand, there is much more profit in the plan outlined above, namely, dividing the sows up while the pigs are sucking.

Men are divided in their opinion as to the advisability of feeding young pigs heavily between the time they are four or five weeks old and weaning time. Where one has saved a large average per sow we certainly think that it pays to feed, and that can only be done successfully when a creep is provided for the little pigs. They need something else besides corn, and while mill feeds are high in price and have been for some time, yet it will pay well to use them to some extent. We do not adhere to or advocate any special mixture. Five parts ground corn, five parts middlings and one part tankage or oil meal will make an excellent slop for young pigs, and we think that it pays to mix it up about twelve hours before feeding. With such a mixture little harm can come from feeding all that the young pigs will eat up clean two or three times daily.

When such a plan as outlined above is carried out you will find that you have bouncing big pigs at weaning time, and there will be no dropping off when that period is passed through. Such pigs are in ideal shape to acquire a good deal of their living on pasture during two or three months after weaning, though, as a rule, we believe that it pays to feed a little grain every day of a growing pig's life.

One thing more. Do not forget to put in a supply of mineral matter, such as

soft coal slack, charcoal or ashes. It requires but little time and a small expense to keep a constant supply of min-

eral matter before hogs, and such a supply seems to be an important part of the whole ration.

## Listing and Surface Planting.

Geo. T. Pettit, Kansas.

Listing is sometimes referred to as "The lazy man's way" of planting corn, yet some of the most energetic, pushing men of our acquaintance practice it. When a man desires to rush in a large acreage in a short time, the lister helps him do it, and the two row disk lister cultivator enables him to tend the crop in good shape without paying out very much for hired help. Trans-Missouri corn belt farmers may be divided into three classes; those who always list,

those who both plow and list, and a rather small, but slowly growing minority who always plow their corn land and never list.

The man who always lists and never plows for corn is usually—not always—a short-term renter who is interested only in getting as much as possible off the farm during his short occupancy, and who believes he can grow corn more cheaply by the listing method than in any other way. If the land has been plowed within

recent years, he finds his theory works out admirably and he raises corn cheaply. On the other hand, if the land has been listed continuously for a number of years, results are not what they ought to be nor what they would be if the ground had been plowed to a good depth and thoroughly pulverized. Listing is essentially a cut-and-cover operation, and continuous listing year after year cannot but be detrimental, particularly if the old row is listed out each time, a method which is much practiced, and which results in the soil between rows becoming so hard that the corn roots can scarcely penetrate it. It is an easy way to plant, but the crop is not so easily tended as it would have been had the soil been more thoroughly pulverized.

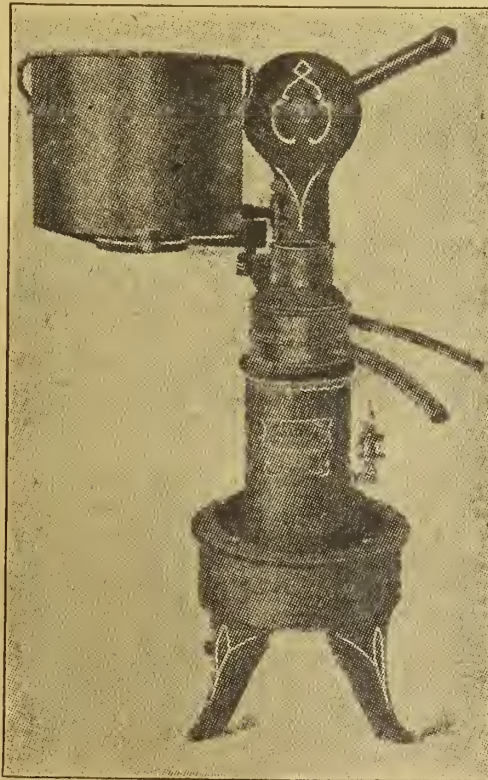

The second class referred to above believes that under certain conditions it pays to list, and sets about making conditions right by plowing the land frequently, not all at once, but keeps the plow running until near planting time, fits and plants the plowed ground, then finishes up speedily by bringing the lister into use. The land having been plowed within from one to three years is in prime condition for the lister to do a good job, and to be easily tended and kept clean during the after cultivation of the crop. The surface planted corn starts quicker and for a time grows faster than the listed corn, therefore cultivation does not come "all in a bunch," but can usually be prosecuted to better advantage than if all were listed or all surface planted. It will be seen then, that there are several advantages in dividing the work between the plow and planter, and the lister.

The third class almost invariably own their farms and farm them or manage them themselves. Many of this class are numbered among the best farmers of their respective communities. They practice rotation of crops and do not run everything to corn, hence their acreage is limited to that which they can handle in a thorough manner by the surface planting method. They believe the plow is a friend to the soil, while the lister is an enemy; that good farming demands the uniform turning and pulverizing of the soil each time a crop is planted; that the soil washes much worse after the lister and that listing makes hard plowing for the crop following. Another reason why some of these men object to the lister is that they have a piece of sod to plow for corn nearly every year and the lister is no good in that kind of ground.

I think most western farmers are agreed that there is some advantage in a deep seated root system; that with the roots deep down in the ground the crop will endure dry weather better and generally stand up better than if they are near the surface. Very often the runners of the surface planter are put down four or five inches under the vain delusion that deep planting on a level surface will cause the corn roots to grow deep in the ground. Of course, deep planting will result in placing the tiny seed rootlets deep down, but these are comparatively insignificant and do not help the plant much after it has developed leaves in the open air and put forth the first set of lateral roots near the surface. Nature has provided that these lateral feeding roots shall be put forth in rings or sets, one set above another, the first or lower set but a short distance below the surface of the ground immediately surrounding the young plant. This is to a great extent the order of growth whether the seed is covered two inches or six inches deep.

### GALLOWAY CREAM SEPARATOR.

Wm. Galloway, President of the Wm. Galloway Company, 103 Jefferson St., Waterloo, Iowa, can well be styled the Farmer Business Man. This title is due him, partially because he has spent so many years of his life on the farm, and partially because he has the welfare of the farmer at heart constantly. He is always looking out for the needs of the farmer, and studying in what way he can best supply those needs. He will not sell an article to any farmer that he cannot back by his reputation. He stands back of every article manufactured by his mammoth factory. This is not all. You need not take his word for anything if you do not wish, for every deal made between him and his farmer friend is backed by a \$25,000 bond, which ought to give the farmer confidence in him. Mr. Galloway realizes that

there are thousands of farmers who would own a cream separator if they could purchase one at a reasonable price, and for this reason, he has put a separator that is first class in every respect on the market. He will take all the risk of it pleasing you. In order that he may furnish you this separator at as low a price as is possible, he has done away with the middle-man, the retail dealer who must have his profit, and will sell to you direct. He has conceived what he calls a "Free Trial Plan" which will enable you to get one of his separators, and test its worth for yourself on your own farm. If you drop him a postal card, at the address given above, he will send you a personal letter, setting forth in detail his "Free Trial Plan," and will also mail you one of his catalogs, which, by the way, is as neat a sample of the printer's art as it is possible to find. This catalog contains just the information about the cream separator that you are looking for. It is not the same old grind, but is gotten out in a style peculiar to Mr. Galloway. Remember, should you get one of these catalogs and decide to order a separator, which you will do in all probability, you need not keep it, if it is not satisfactory in every detail. Remember, also, that all deals made with Mr. Galloway, are backed by his \$25,000 bond. Why not write him today?

Our experiments along this line indicate that deep planting results in placing the first set of laterals a trifle deeper than in shallow planting, because no matter how light the covering, the laterals must be above the depth of the seed, but as between ordinary and very deep planting there is practically no difference. We have examined corn plants that had pushed up through six to eight inches of loose soil, and even here the first set of feeding roots were put out within two inches of the surface. It will be seen, therefore, that the only practical way to induce the plant to put forth roots deep in the ground is to plant in a ditch and then fill it gradually during the growth of the crop. This may be accomplished by either the listing or the furrowing method.

Within the past few years disk furrowers to attach to the common surface planter have been introduced and used to a limited extent, also more recently the combined disk furrower and planter. These implements can be used only on plowed ground and they give good results; although in foul land the lister has an advantage in that it prepares a fresh, clean seed bed, while the furrower is liable to deposit the seed where the young corn plant will be surrounded with weeds almost from the first. Early fall plowing followed by the lister in spring gives an excellent preparation for the corn, the crop being easily cultivated and the yield satisfactory as compared to other methods of management.

The disk harrow is an excellent tool with which to prepare land for listing, and it is being much used for that purpose. A thorough disking a short time before planting will destroy myriads of weeds, put the land in proper tilth to retain moisture, and the greater ease of cultivating the crop will go far toward paying for the work. Listing permits of drilling the seed by single kernels and yet offers superior facilities for keeping the crop clean. Plowing and furrowing also is favorable to drilling, but the crop probably is not quite so easily kept clean as when listed, for reasons previously stated. In surface planting it is quite generally considered advisable to check-row, thus bunching the stalks in hills, a condition which is not the most favorable to the production of large, uniform ears.

Soil washing is the thing most often urged against the lister, and it cannot be denied by the most strenuous advocate of listing that it takes less water to start little rivulets down the listed rows than on ground that is top planted, the plowed ground usually possessing a greater absorbent capacity. And yet, when the bed of loose earth is filled to its capacity by a very heavy rain, if the rain continues, serious washing is bound to occur on rolling land. We believe, however, that more corn is washed out and rather more soil washed away where listed than where top planted. Surface planting permits of the frequent use of the weeder during the early stage of growth, and with the weeder to follow the cultivator it is possible to do much more effective work in surface drilled corn than could be done without it.

The best way to plant listed corn is with the riding sulky lister and drill drawn by four good horses, then the two row machine drawn by the same team will do excellent work, the shovels tearing up the middles in good shape at the second working, provided they are set as deep as they should go. It is not the judicious use of the lister, but its abuse that is to be condemned.

#### The Time to Plant Sod Corn.

To the Editor of The Homestead:

The usual time of planting sod is late in May or June, the idea being to escape the ravages of cut-worms. Some seasons late planting is satisfactory. There is always the chance of being caught by frost and also the contingency that if the late planting should not be a good stand it then would be too late to replant.

There are sixteen varieties of cut-worms that injure corn. According to Forbes, the Illinois State Entomologist, eight of the nine leading varieties do not pupate and cease their work before June. I have found cut-worms in July still active.

No corn planted in Iowa after the first of June can be expected to produce fully matured grain except the ninety day varieties. Custom is a good thing to follow because it shows the experience of others worked out in practice. However the custom of planting sod corn late, according to my experience and

The mutually advantageous arrangement whereby American and Canadian newspapers and other periodical publications have been delivered in both countries without payment of additional postage has been abrogated, and, after May 8, 1907, the publishers of both countries will be required to prepay postage in stamps on all copies of their publications going across the border line between the two countries. This will compel Canadian publishers to charge much higher subscription prices in the United States than in Canada and will render it necessary for the publishers of the United States to raise the prices of their publications to Canadian subscribers. The postage rate heretofore charged has been a low price per pound, and the effect of it has been to encourage the circulation of the papers of both countries. The new rate is one cent for four ounces and each fraction of four ounces. The postage on weekly publications will be from 52 cents to \$1.04 a year, according to the weight. Most of this amount will necessarily be added to the subscription price. The Homestead regrets this change, as it tends to obstruct or interrupt the free and friendly interchange of ideas between these two closely related neighboring peoples.

Official influences unfriendly to the press have been working for several years past to secure an advance in the rate of postage on newspapers and magazines in this country. For over twenty years, the rate has been \$1 per hundred pounds, regardless of distance. This considered as a freight or express rate, is a high rate and constitutes a heavy tax upon the publisher, who under the present law prepaies the postage. Compared, however, to the rates of postage on letters, circulars and transient newspapers, the rate is low; and, if the circulation of newspapers and magazines were not a highly educational force, an influence for the advancement of every interest of the people, it would probably not have been adopted. Congress fixed the rate in the hope of making good reading matter cheap and abundant; and that object has been accomplished. The publishers have given the benefit of the low postage to the subscriber, who has thereby been enabled to purchase newspapers and periodicals at very low prices.

The third assistant postmaster general of the United States has within a year proposed that the rate of postage on newspapers and magazines be quadrupled, the new rate he recommended being four cents a pound. Congress took no action upon this recommendation and it is believed never will do so. Congress has from the beginning of our government uniformly favored low priced facilities for distributing newspapers and magazines; and, although the postoffice department has several times sought to have the rate advanced, congress has always taken a wise, broad, patriotic and

observation, does not give the maximum results.

In the latitude of central Iowa I would prefer to have my corn on sod planted previous to the middle of May. My experience convinces me of it. Also others who have tried it. In the first place you will get a sound, well matured merchantable corn that will grade on the market. Second: the late varieties now grown throughout the state need the entire growing season to mature in. Late planted corn can not be expected to produce the sound grain that the markets desire. The yield is also much larger.

Before planting your corn early the ground needs to be carefully worked. Very shortly after plowing harrow the sod by driving in the same direction that the plowing was done. This is necessary in order not to upset the sod. The next step is to disk and harrow alternately about one week apart until planting. The idea is to arrest the ravages of the cut-worms. Many of them live over winter partly grown, others hatch from eggs in the spring. In any case he does not like

statesmanlike view of the question and has never in a single instance advanced the rate. It certainly should not do so now.

The success of The Homestead's department of classified advertising is phenomenal. The arrangement whereby The Farmer and Stockman, of Kansas City, Mo., and The Wisconsin Farmer, of Madison, Wis., publish every classified advertisement of The Homestead without additional charge is an admirable one and is heartily appreciated by our subscribers. We advise our readers to look this department over every week, as it contains many interesting and attractive announcements. If you desire to insert an advertisement in this department, you will find the rules governing classified advertising clearly told in the announcement at the top of the classified page.

"The results from our advertisement in The Homestead exceeded all our expectations," write Messrs. Garland and Fowler, proprietors of the Red Cedar Nursery, Afton, Iowa. "We of course, expect to continue to use your paper." This is the experience of practically every Homestead advertiser who has a good proposition to publish and who regularly and persistently advertises in The Homestead. One hundred thousand farmers and their families, hired help and neighbors read The Homestead each week and are helped by it in solving the problems of the farm, orchard, garden and feed-lot. The advertiser of nursery stock, machinery, implements, live stock, poultry and other things wanted by the farmer can find no better audience to talk to about what he has to sell than this vast army of farm folk.

"I think The Homestead is a grand farm paper," is the verdict of Mr. Day Terwilliger, of Mt. Ayr, Iowa. "I subscribed for it when I was married eight years ago, and have continued to read and enjoy it ever since. I do not see how a farm can be run without it. I especially like 'Farm Furrows,' 'Day by Day' and the letters of Henry Hatch, all of which are grand. I take the Red Letter combination and appreciate every one of the five papers." The Homestead always likes to receive the subscription of a young farmer on his wedding day, and to become a part of his happy married life, helping him and his good wife to solve all their problems of farm and farm home. There is no more suitable wedding present than a ten-year subscription to The Homestead, which costs the giver five dollars and gives the recipients ten years of safe and reliable guidance in farm work.

Mr. C. C. Morgan, of Fairfax, Mo., writes that he is well pleased with The Homestead, and especially so with the articles on the care and raising of swine. "I always read the articles about hogs first," he says. "I am greatly interested in that subject, as I raise from 400 to

500 hogs a year. I rent a half section of land and run it on the shares; have had the same place for five years now." To such a stock raiser as Mr. Morgan, The Homestead is certainly worth many times its cost. The great industry of raising hogs has always been recognized by this paper as of prime importance; and no issue of The Homestead is published without some practical information for the breeder or feeder of swine.

"I have been reading The Homestead for over fifteen years," writes Mr. Nels Madson, of Ames, Iowa, "and I am very well pleased with it. In fact, it is the best farm and family paper I have ever seen." Fifteen years' acquaintance is a pretty thorough test of the excellence of a farm paper; and this testimony of Mr. Madson is therefore very valuable and conclusive. There are, of course, many thousands of our readers who have been Homestead subscribers much longer, and to all such it has become an inseparable friend, adviser and counselor. We greatly prize the friendship of these old subscribers; and it is our aim to make The Homestead so good that all of its new subscribers will remain with it until they, too, will be as firmly established in their love and affection for it as the oldest patron.

Very deeply rooted is the affection of an old subscriber for the paper he has read for years. This is shown by the thousands of cases where the old home paper is ordered to follow the subscriber to his new home hundreds or thousands of miles away. The Homestead has many such subscriptions, and greatly values them. On our desk at this moment lies a letter from Mr. R. H. McIntyre, formerly of Armour, Neb., but now receiving his Homestead at Vancouver, Wash. "We enjoyed your paper in Nebraska," writes Mr. McIntyre, "and as we left many an old friend there, it will be a pleasure to have one old friend visit us every week in our new home. I shall ever remain a friend of The Homestead and you have my best wishes for its complete and permanent success."

In the opinion of Mr. G. W. Shafto, of Kearney, Neb., farming is among the noblest of pursuits, when pursued on the high plane of scientific knowledge. This view makes him a warm friend of The Homestead, which sentiment he cordially expresses in a recent letter renewing his subscription. "I could not possibly do without The Homestead," writes Mr. Shafto. "I have received many helpful suggestions and much valuable advice along the lines of general farming and stock raising. I do not believe that anyone can run an up-to-date farm without the assistance of some agricultural paper; and I consider The Homestead as leading all others toward the high plane of scientific farming, thus aiding us in placing our calling where it belongs—among the noblest pursuits."

bushel of seed is not too much for six and one-half acres.

The long period of preparation is equally well adapted for all kinds of ground. When we really begin to grow corn with skill it will be along these lines. Although sod will force corn along very rapidly, yet taking it one year with another the medium planted corn is the largest yielding.

The week previous to the middle of May would be the one I would plant all my corn in if it could be done.

Muscatine Co., Ia. George Steen.

#### SACRED PICTURE FREE.

On page 14 one of our advertisers offers to send any who will answer the advertisement a picture of "The Good Shepherd." To representing a character of Bible times. To secure this picture you should send ten cents with your request for a three months' trial subscription to The Mother's Magazine. This is a large illustrated home and family magazine. The picture no doubt is worth several times the value of the magazine. The number of the picture is 235, which you should remember to mention in your letter. Address The Mother's Magazine, Elgin, Ill.

disturbance. Stirring the ground turns him out to be killed by the sun or taken by birds. Not the only object accomplished in the regular stirring of the soil is the killing of cut-worms. The saving of moisture and liberation of plant food is done by these same operations.

Most soils have not enough work put on them. Some have enough work done on it, but usually it is all done the week previous to planting and it does not do the good it should. By spreading the work over a longer space of time more good will be accomplished in saving moisture, in the disturbance of the culture, and the corn root louse. These insect ravages cannot be entirely checked by these methods, but to a large extent can be avoided. The corn root louse especially can be greatly reduced by the thorough preparation as indicated.

Sod land requires more seed than other ground because of a greater mortality of plants, caused by cut-worms, squirrels and other things so that one

## Vigorous Pigs

The sow is supposed to impart to her offspring her own constitution. It is, therefore, important that we raise pigs from vigorous, healthy sows. No stock will give as much return for the keeping as pigs, if properly cared for. It is said that in ten generations the progeny from a single sow will number into the millions. But disease must be avoided. Proper feeding is the first necessity and cleanliness the second. The advantage of giving a sow a tonic to insure proper digestion and assimilation, and to increase both quantity and quality of milk for pigs is apparent.

Dr. Hess Stock Food is the combination of just the proper tonics, etc., to produce perfect health, and hasten maturity. Given to the sow before farrowing, and up to weaning time, and in the milk and meal to the pigs afterwards, there will be no loss from disease, and a steady vigorous development will result.

## DR. HESS STOCK FOOD A TONIC

is the prescription of Dr. Hess (M.D., D.V.S.) and costs but 8c per month for the average hog of 125 pounds. It is especially intended to make market stock grow faster, cows give more milk and horses do more work. Besides this, it gives stock that sleek, healthy appearance that commands the fancy price. As proof that Dr. Hess Stock Food will produce the results we claim, we quote Professors Winslow, Finlay Dun and Quitman—the most noted of all medical writers—who tell us that bitter tonics improve digestion, that iron makes blood and nitrates of soda and potash assist nature in throwing off the waste material from the system. These are the ingredients contained in Dr. Hess Stock Food, and besides it is

**SOLD ON A WRITTEN GUARANTEE.**

100 lbs. \$5.00. 25 lb. Pail \$1.60.

Smaller Quantities at a Slight Advance.

Except in Canada and Extreme West and South.

Where Dr. Hess Stock Food differs in particular is in the dose—it's small and fed but twice a day, which proves it has the most digestive strength to the pound. Our Government recognizes Dr. Hess Stock Food as a medicinal tonic and this paper is back of the guarantee. Free from the 1st to the 10th of each month—Dr. Hess (M.D., D.V.S.) will prescribe for your ailing animals. You can have his 66 page Veterinary Book any time for the asking. Mention this paper.

tell toad stools from mushrooms, eat a dish of each; the dish that kills you contains the toadstools. Mail the paper containing this only to your dead headers and you may get rid of some."

The next worst job to stacking straw at thrashing time is that of riding the disk on rough ground or sod. One is bumped up and down, frozen and thawed and as a climax carries away a good portion of alluvium at quitting time.

While it is not a general practice it is nevertheless a good one to disk the stalk ground that is to be plowed for corn. Evaporation of moisture is prevented by the mulch and trash is much reduced. Such a field plows up very mellow.

Cocoa is becoming a popular beverage on the farm as elsewhere and at the expense of tea and coffee, too. According to statistics, the importation of these latter products has fallen off considerably in the last two years. Most any beverage ought to be good, however, with plenty of cream and sugar.

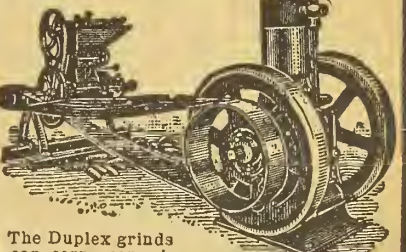

Reading and traveling are two great sources of education. The farm home may have the best literature in the world at a small cost. By economies in certain lines all members of a family may enjoy trips at convenient times, which will greatly stimulate the desire to know more of this great country in which we live.

My opinion is that the advance in methods of doing farm work has far surpassed that which has taken place in the household. Now one man can do as much as six could years ago, but in the house a woman finds the exactions of present methods of living a burden which can be relieved but little in labor-saving machinery.

To the man who lives in the city and who fails to appreciate the fact that

## THE KELLY LINE

The Kelly Simplex Air and Water Cooled Engines and Kelly Duplex Grinders

The Duplex grinds ear corn, corn in the shuck, Kafir corn and all kinds of small grain. Especially adapted for farmers and stock feeders' use. **The O. S. KELLY WESTERN MFG. CO.**  
DEPT. H, IOWA CITY, IOWA.

farm work cannot be planned for any number of days in advance, farming looks easy. It is the inexactness of the work that makes good judgment founded on practical experience an absolute essential to make 4 per cent on an investment.

If city inhabitants got into trouble over wall partitions as easy as farmers do over line fences what a revolutionary state of affairs would exist. A law-suit so seldom ends with the verdict of the court.

I've seen many a three-year-old colt that had more sense than a twenty-year-old man. The common practice when a colt is first put in harness is to strike him to make him go, naturally he goes too far, so you jerk him; so there is only one other place for the colt to go, namely, straight up.

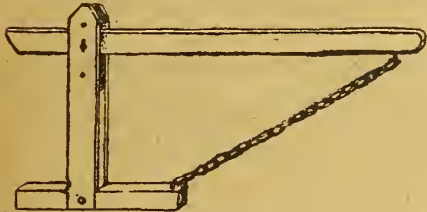

## HINTS, SUGGESTIONS, DEVICES AND CONDENSED LETTERS FROM CORRESPONDENTS.

Mr. F. M. Goldsmith, Henry Co., Iowa, submits a plan for bracing posts which is illustrated in the attached sketch. The end post is the one to the left side of the sketch. An anchor secures one end of the wire to the second post, while the other wire is secured on both posts. Both are twisted taut when the brace is fixed in position. With this kind of bracing the sender of the idea thinks the corner post will not lift.

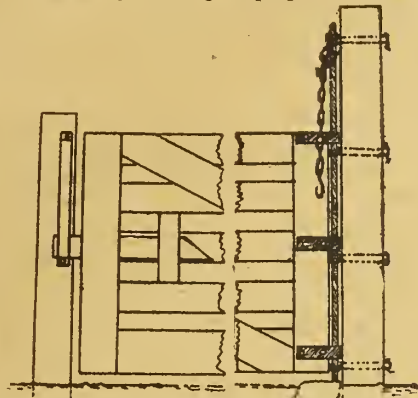

A very handy and simple-made wagon jack appeared in a recent issue of the *Prairie Farmer* and we reproduce it for the benefit of those who believe in sav-

ing their backs where it is possible. The standard is made to suit the height of the wagon trucks; a little lower than the rear axle and a bit higher than the front one. The device for holding the lever in its different positions is a chain from the platform, which hooks in the finger at the end of the handle.

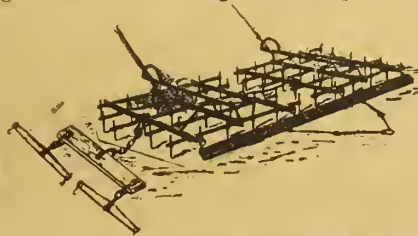

Regarding a farm gate, which one of our subscribers, G. G. B. Decorah, Iowa, sends, we quote from his letter as follows: "The principle feature in the construction of this gate is that it can be raised from the ground two or three feet or more very easily. This makes it possible to let sheep or swine run under it and also to avoid shoveling much snow in winter when a bank collects on one side of the gate. The gate is made very simply and at the same time costs but little. The gate proper is made like any other and its width and height to

suit the driveway. The hinges are made of heavy strap iron and should be three in number, which should be hinged around heavy pump tubing on which they may be moved up and down. The tubing is fastened to the fence post by twisting four or five strands of number 12 wire and giving them one twist around the tube, then putting the ends through a hole in the post after which the two ends can be twisted and held in the hole by driving a plug in the hole

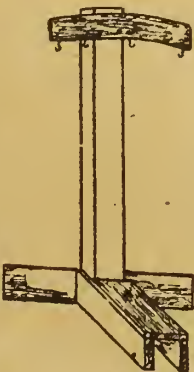

from the back side of the post. They may then be twisted around this plug which will hold them firmly in position. A large, thick rock should be placed under the upright tubing for a foundation. To hold the gate in position when it is raised to allow hogs to pass under, the same should be secured with a hook at both ends, sufficiently long to reach from the top of the hinge tubing and pass around the upper loop hinge of the gate. With this chain the gate may be held in any position desired. The gate latch is made out of a long piece of strap iron which is bolted to the side of the post in a way that it will fit the latch at the different heights as shown in the illustration.

A very splendid idea for transporting a toothed harrow is to connect the sections and hitch on the end. No matter how wide the drag, when drawn in this fashion it will pass through the smallest gate as well as a wagon. It is quite of-

ten necessary to drive through lanes in small grain fields and where the harrow is drawn as ordinarily there is much damage done. Who has not had such an experience or spent valuable time in working a twenty-foot harrow through a fourteen-foot gap? All this may be avoided by securing several trace chains or having rods made to hook the sections together. Have a small chain to fasten the double-trees on the end section and you can take a harrow through gates and narrow lanes without difficulty.

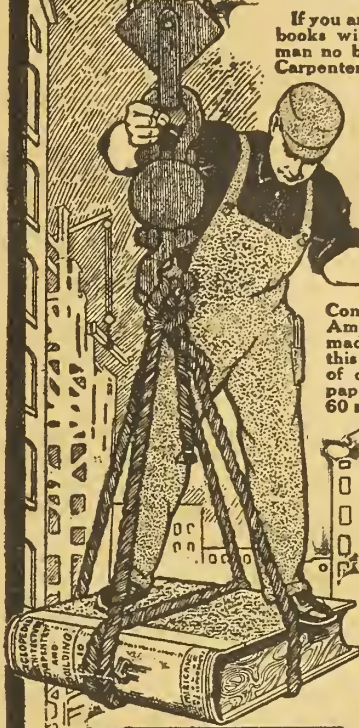

A young reader out in Washington sends us a plan for making a grain bag holder. As will be seen by the diagram the sack is hung on four hooks, made out of wire staples, bent as desired and driven in the lower edge of supporting arms. The outside hooks point forward; the inner ones backward. The standard may be a 2x4 or 4x4 and the platform is cleated on as shown in the sketch. It is quite probable that a good many boys could avoid a dusty job by making one of these bag holders.

The illustration herewith given shows how a fence may be constructed through

a ravine so that the posts will not leave the ground. Instead of putting the

## BUILD WITH PRACTICAL KNOWLEDGE

If you are a House-Owner or planning to build, this set of books will save you many times its cost. For the young man no better opportunity could be offered. If you are a Carpenter, Contractor, Builder, Architect, Draftsman or Mechanic, it offers you an exceptional chance to advance in your present occupation. The truest test of your present efficiency is the amount earned by you from week to week. Unless you are advancing and earning MORE AND MORE money as you grow older, there must come a time when younger and more ambitious men will crowd you out. Learn now to turn your spare time into money.

### Cyclopedia of Architecture, Car- pentry and Building

Compiled from representative instruction papers of American School of Correspondence. This offer is made merely to advertise the School. We believe this great work will easily demonstrate the superiority of our method of instruction. If you mention this paper, a 200-page hand-book describing the Schools, 60 regular courses, will be sent FREE.

We increased the size of the first edition in order to make a saving in cost, and will dispose of 1,000 sets by a

### Special Advance Sale Less Than 1/3 Regular Price

Ten Massive Volumes, each nearly one foot high. Handsomely bound in half red morocco. Over 4,000 pages, 1,900 illustrations, full page plates, plans, sections, etc. Printed on highest grade paper; entirely new type—DE LUXE books in every particular.

**SPECIAL \$19.80 REGULAR \$60**

Chicago

posts upright the holes are dug at right angles to the surface. When the wires are made taut and are well stapled the force which is exerted in an upward direction tends to cause the post to bind rather than to pull out straight. The wire directly over the ditch is held down somewhat by the large stone which is hung on the wire and hangs in the way of stock that might attempt to walk up the ditch and under the wire.

### Dispersion Sale of The Clover Blossom Short-horns.

The dispersion of the Clover Blossom herd of Short-horns owned by Mr. Geo. Bothwell, of Nettleton, Mo., on April 22d, brought out one of the finest crowds of breeders that have assembled at a sale in Missouri for some time past. Illinois, Nebraska, Kansas and Missouri were well represented by men who appreciate good cattle and from the start it was evident that all had great faith in the future of the red, white and roans. Had it not been for the unfortunate accident of an unruly cow stampeding during the early part of the sale a higher average probably would have resulted. On the entire offering of fifty-nine head an average of \$159.41 was made. As was predicted by the press, Imp. Ethel and roan heifer calf by Golden Lavender topped the sale at \$1,000, going to Messrs. Harriman Bros., of Pilot Grove, Mo. These gentlemen also took Maid of Honor at \$490 and Echo at \$200. Ethel and Echo were granddaughters of the great Imp. Nonpareil Victor. Maid of Honor was got by Grand Victor. Messrs. Harriman Bros. made no mistake in adding these fine things to their all-Scotch herd. Mr. Henry Kuper, of Humboldt, Neb., took three good things, among which was Imp. Winifred 4th and heifer calf by Golden Lavender, at \$500. Mr. A. J. Ryden, of Abingdon, Ill., who was the runner up on Imp. Ethel, later lauded Clover Blossom Wimple, a daughter of Nonpareil Victor, and bull calf at \$675, and Keepsake, a daughter of Grand Victor, and heifer calf, at \$450. Golden Lavender, the herd bull sold for \$995 to Mr. Ben Bothwell, of Breckenridge, Mo. Mr. A. O. Stanley, of Sheridan, Mo., secured Lavender's Best by Golden Lavender and out of Clover Blossom Wimple at \$300. He is a full brother to the show heifers that were so prominent in 1900 and 1901 and has gone to do service in a good herd. Colonels Belows, Graham and Harriman all did excellent work. Following is a list of all sales of \$100 and over:

**COWS.**  
Keepsake, calved June 24, 1906, sire Grand Victor, and c. c., A. J. Ryden, Abingdon, Ill. \$450  
Imp. Winifred 4th, calved March 5, 1906, sire Scottish Archer, and c. c., Henry Kuper, Humboldt, Neb. 500  
Maid of Honor, calved Jan. 6, 1902, sire Grand Victor, and c. c., Harriman Bros., Pilot Grove, Mo. 490  
Clover Blossom Wimple, calved Jan. 26, 1903, sire Imp. Nonpareil Victor, and h. c., A. J. Ryden. 675

Imp. Ethel, calved July 23, 1900, sire Proud Victor, and c. c., Harriman Bros. 1,000  
Echo, calved Nov. 13, 1905, sire Nonpareil Conqueror, same. 200  
Sweet Rose, calved April 11, 1904, sire Nonpareil Conqueror, and h. c., Henry Kuper. 225  
Nonpareil Queen, calved April 1, 1902, sire Nonpareil Victor, Joseph Miller & son, Granger, Mo. 460  
Day Dream, calved Dec. 20, 1904, sire Nonpareil Victor, Norman Jones, Humphrey, Mo. 125  
Corline, calved Feb. 24, 1903, sire Chief Cruickshank, and h. c., A. W. Shiflet, Wheeling, Mo. 160

Lavender's Best, calved Oct. 11, 1905, sire Golden Lavender, A. O. Stanley, Sheridan, Mo. 300  
Victor Conqueror, calved July 21, 1906, sire Nonpareil Conqueror, Creswell & Carpenter, Braymer, Mo. 100  
Golden Acorn, calved Aug. 30, 1906, sire Golden Lavender, A. W. Shiflet. 100

**SUMMARY.**  
47 females ..... \$7,270; average. \$154.70  
12 bulls ..... 2,135; average. 177.91  
59 head ..... 9,405; average. 159.41

### A TIMELY SUBJECT.

Hay tools are a timely topic now with the farmer and the person expecting to buy new outfits or repair the old should have a copy of the catalog issued by the Canton Foundry and Machine Co., 614 Eighth St., Canton, Ohio. They sell direct, saving you money. Write them mentioning this paper

## Paint that Fits

Use Pure White Lead, thinned with Pure Linseed Oil, and your paint can be mixed to suit your work.

No ready-mixed paint preparation can be equally suitable to old or new, rough or smooth, hard or porous surfaces.

## CARTER Strictly Pure White Lead

makes the best paint possible to produce. Meets every condition, gives any tint or color, covers most surface and gives longer wear than any other paint in the world. Contains no clay, chalk or other adulterant that makes ordinary paint mixtures crack, scale and fade. Every atom is paint.

Write for our booklet, "Pure Paint." Tells how to know good paint, and shows six beautiful color schemes.

Address Dept. D,  
CARTER WHITE LEAD CO., Chicago, Ill.  
Factories: Chicago—Omaha.

### BEE KEEPERS

Write for our free catalogue of bee hives, honey boxes, bee smokers, and all kinds of bee supplies at lowest prices.

LEAHY MFG. CO.  
1735 So. 13th St. OMAHA, NEB.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit \$1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

CORPORATIONS—STOCKHOLDERS.

A Subscriber, Northwood, Iowa.—I am a shareholder in a co-operative creamery association located in Minnesota, and incorporated under the laws of that state. Our charter expires next December. We are out of debt and have \$1,000 deposited in a bank in Iowa and own the creamery buildings, necessary machinery, etc. (1) Can I collect my share of the company assets when its charter expires? (2) After the expiration of the charter what time is allowed the company to wind up its affairs? (3) Can the time of the charter be extended? (4) Are the shareholders liable for the debts of the company?

Answer.—(1) No, not until the affairs of the company are settled and its capital is divided. (2) Three years. (3) It can. The law provides that the charter may be renewed for not to exceed thirty years by a three-fourths vote of the stock represented at any regular meeting, or at any special meeting called for that purpose which shall have been clearly specified in the call, shall adopt a resolution to that effect, and those desiring it shall have purchased at its value, the stock of those opposed thereto. (4) Stockholders are liable for all unpaid instalments on the stock owned by

them, or transferred for the purpose of defrauding creditors. Also in case of failing to comply with the law in relation to organization of company, and in case of other violations of law relative to the transaction of corporate business.

HOLIDAYS IN KANSAS.

A Subscriber, Weir, Kansas.—(1) How many legal holidays are there in a year? (2) Have mail carriers a right to lay off on days that are not legal holidays? (3) Have mail carriers a right to lay off on account of muddy roads?

Answer.—(1) Three,—30th of May, Memorial day; first Monday in September, Labor day; 22d of February, Washington's birth day. As to questions two and three correspond with the Postmaster General at Washington, D. C., and get copy of rules and regulations in reference to mail carriers.

HUSBAND AND WIFE—HOMESTEAD.

A Subscriber, Van Horn, Iowa.—I have lived with my wife for thirty years, and have been very unhappy for the last fifteen years. I had but little property when we were married. I have considerable property now. I want to rent my farm and move to town, but my wife refuses to go unless I give her one-third of all my property, both real and personal. We have but one child and it is of age. Can I lawfully rent my farm, move to town and compel my wife to go with me, without giving her the property she demands?

Answer.—You cannot compel your wife to leave the homestead and go to town to live. Section 3166 of the code provides that neither husband nor wife can remove the other, nor the children, from the homestead without the consent of the other.

STOCK DEALS.

A Subscriber, Audrain, Mo.—(1) A advertised a cow for sale, representing her to be eligible to record. On the day of sale he led her out, and she appeared to be a fine animal. A gave the name of the man who bred her, and owned her sire and dam; and said he would get the number and name of sire and dam, and furnish them to the purchaser. B bought the cow for \$67, and afterwards A said the records were lost, but refuses to take the cow back and return the price, or make any reduction on the price. What remedy has B, if any? (2) Last September A bought a buck from B's hired man, B being away from home at the time. When B returned the man told him of the sale, and that one of the testicles of the buck was swollen, and in bad shape. B at once wrote to A, telling him to examine the buck and if he was not all right, to return him and get his money or another buck. A replied that the buck was hurt and that he would return him in October. B went to A's place to see the buck, and find out why he was not returned, and found that A was breeding his ewes to him, but A said he would return him after January 10th. The buck died, but not from the injury. B offered A \$7.50, but A refused to accept it. What is right about this matter?

Answer.—(1) B can sue A and recover judgment for the difference between what the cow is worth, and what she would have been worth if A had furnished the means by which she would have been eligible to record as a purebred animal. (2) It is right in this matter that B should not pay A one

## IOWA STOCK FOOD CO.

Jefferson, Iowa.

red cent, and under the circumstances, A cannot recover anything at law.

INSURANCE MONEY.

A Subscriber, Coeur d'Alene, Idaho.—(1) Suppose a man has a policy of life insurance, payable to his estate, and died leaving a wife and children, do the children have to become of age before they can use the money? (2) What share of the insurance money is the wife entitled to in such a case?

Answer.—(1) They do not, but they must have a guardian to manage and control their property. (2) One-third.

LIFE ESTATE—TENANT.

A Subscriber, Sunbury, Ohio.—A and B are husband and wife. C had a large house and allowed A and his wife to move into and use a part of it, the arrangement being that A was to take care of a horse and cow for C and provide kindling for her, for the use of part of the house till spring. After two weeks C was taken sick, and A and B took care of her for twelve days, when she died. Before her death five of her sons came and made more work. C's right to the house was only a life interest. (1) Can C's heirs put A and B out of the house before spring? (2) What wages can A and B recover for taking care of C while she was sick?

Answer.—(1) C could not give A and B the right to use the house beyond the time when her interest expired, so the right of A and B expired at the death of C, and whoever was entitled to the house after that time could oust A and B. (2) Whatever they could prove their services were worth.

DAMAGE FROM SEWAGE.

A Subscriber, Orange City, Iowa.—The county built a new court house two years ago and put in water works, and constructed a sewer so as to discharge into a small well which overflows all the time, and discharges the filthy water over my pasture and grass land, making the land so wet my cattle cannot go on it, and spoiling the grass and pasture. The filthy stuff runs within twelve rods of my house, and my stock is made sick by it. My farm is about a half mile from the court house. What can I legally do about the matter?

Answer.—Employ a good lawyer to bring suit for damages, and for an injunction to restrain the authorities from flooding your land with sewage. If your claim for damages be against the county, and not against persons or officials in their individual character, you must first present your demand to the board of supervisors of the county, and then if it refuses or neglects to settle with you, you can bring suit.

CONDITIONS OF LEASE.

A Subscriber, Clutler, Iowa.—A rented a farm from B for one year by written contract ending March 1, 1907. The contract states that A is to leave the place in as good condition as he found it when he moved in, excepting ordinary wear and tear. When A moved on the place the manure had been hauled out, and there was about twenty acres plowed. Last fall A failed to haul out the manure and did no plowing. During A's stay on the place he has broken up the barn doors and torn out the partition and mangers. (1) Can B recover damages from A on account of his failure to haul out manure, and to plow ground? (2) Can B recover damages from A on account of his breaking the doors, partition and mangers in the barn?

Answer.—(1) We do not think B can recover damages on account of A's failure to plow or haul out manure. The provisions of the contract as you state them do not seem definite enough to cover such a claim for damages. (2) B can recover damages for the broken doors, partition and mangers of the barn,

Porter's "Meadow King" Hay Carrier

Has wide open mouth, with swinging fork pulley. With this Carrier you can fill the mow closer to the roof of barn than with any other Hay Carrier. The throat of the Carrier has a very large opening, which permits the pulley to approach with a swinging load, and the load can swing in either direction when locked in the Carrier.

J. E. Porter Co., - Ottawa, Ill.

Traction Engines For Sale.

We have on hand ready for delivery several 15 Horse-power Traction Engines, new and second hand, also one 8-horse-power Traction Engine second hand, that we will sell very cheap in order to close them out within the next few months. A great opportunity to buy a good engine at practically cost price.

THE O. S. KELLY MFG. CO.,  
IOWA CITY, IOWA.

because such breaking was not ordinary wear and tear.

A BAD DEBT.

A Subscriber, Galva, Iowa.—In August, 1902, A bought a bull from B, for \$35, and paid the price, not knowing of a mortgage which was on the bull. In December the mortgagee took the bull on the mortgage, and sued A for damages, but before trial the case was dropped. B was a single man, and not worth anything, so he settled with A by giving his note for a certain sum of money. B has not paid the note nor any of the interest. He is still a single man and has no property. What can A do with B? In case of a lawsuit, who will bear the expense?

Answer.—Nothing. You would as well ask how to get blood out of a turnip. If a man has no property you cannot compel him to pay a note by law. A could of course recover a judgment for the amount of the note and interest, but could not collect the judgment. In case A should sue B the expense would have to be borne by A.

We wish to call the attention of our readers to the advertisement of the National Correspondence School of Dressmaking found on page 14 of this issue. This school has been very successful in teaching hundreds of ladies the art of dressmaking and we would ask any of our lady readers who may be interested in this matter to write to this school and ascertain what will be required of them to take a full course of instruction by correspondence. The company will be very glad to answer any questions regarding their system and how it is taught.

## Live Harness

Don't allow your harness to dry up and die. Once this happens it can never be remedied. Save the harness, save expense, prevent accidents by using

# CLASSIFIED ADVERTISEMENTS

ADVERTISEMENTS are inserted in this department of The Homestead (and, by special arrangement, also published in The Wisconsin Farmer, of Madison, Wis., and The Farmer and Stockman, of Kansas City, Mo., without additional charge) for the low price of five cents a word for each insertion, no insertion being accepted for less than \$1.20; and cash must invariably accompany the order, as we keep no books for this class of business. No display type or illustrations are admitted. Each number and initial letter or abbreviation, including the address, counts one word. Form for printing this page closes on Saturday of the week preceding publication, hence copy must be mailed so as to reach The Homestead on or before Saturday morning. Guaranteed combined circulation of the three papers over 190,000, reaching a farm population of at least 950,000 in the states of Iowa, Illinois, Nebraska, North and South Dakota, Minnesota, Wisconsin, Missouri, Kansas and Oklahoma.

## PLYMOUTH ROCKS.

EGGS FOR HATCHING from Barred Plymouth Rocks, Bright and Latham strains. None better for utility and fancy points. Price \$1.00 per 15; \$5.00 per 100. Eggs guaranteed fertile. J. C. Watts, Berwick, Pa.

WYSONG'S BARRED ROCKS are flatter than all others. Booking orders for eggs, \$3 per 15; \$5 per 30. Satisfaction guaranteed. O. B. Wyson, Cashier Bank of Fitchburg, Fitchburg, Ill.

FOSTER PRIZE-WINNING Barred Rocks, stock scoring 92. Seven grand matings and high scoring range flock. 60 choice hens and pullets for sale. Circular free. Albert Foster, Itasca, Iowa.

BARRED ROCKS exclusively, choice stock, farm range. Fifteen eggs, \$1.00; 50, \$2.50; 100, \$4.00. Safe delivery and satisfaction guaranteed. Adam A. Weir, Clay Center, Neb.

BUFF PLYMOUTH ROCK eggs from scored stock, shipped with care, guaranteed to hatch; per 15, \$1.50; 30 for \$2.50. Kelley Poultry Farm, Altoona, Iowa.

EGGS from White Plymouth Rocks, pure white, standard bred, 75c per 15, \$3.50 per 100. Pekin ducks, 60c per doz. Mrs. John Holmstrom, Gilmore City, Ia.

BARRED and Buff Rocks, Hawklus, Thompson and Bradley Bros. strain. Eggs, \$1.00 for 15; \$5.00 per 100. Mrs. W. R. Cremer, Reinbeck, Iowa.

EGGS from prize-winning Barred, Buff and White Plymouth Rocks. 15 eggs, one dollar; 45 eggs, two dollars. A. Matthews, Mt. Union, Iowa.

EGGS—Barred Rocks, 15, \$1.00; 30, \$1.75; 100, \$5.00. R. C. Rhoads Island Reds, 15, \$1.50; 30, \$2.75; 100, \$5.50. Harry Fahn, Emmetsburg, Iowa.

BARRED Plymouth Rocks, farm raised. Eggs, \$1.00 for 15; \$2.00 for 30; \$3.50 for 100. Anthony O'Connell, Toronto, Iowa.

WHITE ROCKS, Fishel strain, high scoring farm range. 15 eggs, \$1.00; 30, \$1.75; 100, \$4.00. D. W. Cronch, Ogden, Iowa.

WHITE Plymouth Rock eggs for hatching, \$1.25 per sitting. Charles B. Hartman, Hampton, Iowa.

BARRED ROCK EGGS, 25, \$1.00; 100, \$3.00. Mrs. C. H. Medbury, Ladonia, Iowa.

## LEGHORN.

MONEY-MAKING Buff Leghorns. Banner Buys for fine birds and eggs. Solid buff rooster, four hens \$5.00. Fifty fresh eggs, \$2.00; nine dozen, \$5.00. Shipped next day. Agnes Smiley, Bradyville, Ia.

EGGS—Single Comb Brown Leghorns, direct descendants of Madison Square, New York prize winners. 25, \$1.60; 100, \$4.00; 200, \$7.00. O. T. Calvert, Rock Falls, Iowa.

ROSE Comb Brown Leghorns exclusively. Eggs for hatching, single sitting of 15, \$1.25; two or more sittings, \$1.00 each; \$5.00 per 100. T. A. Davenport, Belmont, Iowa.

JOHNSON'S laying strain R. C. Brown Leghorns. Every day layers in winter. Score 93; sitting, \$1.00. Send for circular. H. M. Johnson, Formosa, Kan.

S. C. B. LEGHORNS are the kind that lay. Eggs from prize winning stock, \$1 for 15, \$5 per 100. Mrs. Rosa Gardner, 1103 Walnut St., Oaage, Iowa.

ROSE Comb Brown Leghorns, exclusively. Vigorous farm raised stock. Eggs, 15, 75c; 30, \$1.00. E. B. Sinn, Route 3, Brighton, Iowa.

ROSE Comb White Leghorn eggs from good layers scoring to 96. 15 eggs, \$1.00; 30 eggs, \$1.50. Circular. M. F. Hornung, Alden, Minn.

S. C. W. LEGHORNS, Exclusively, standard bred. Choice select eggs, 15, 75c; \$3.00 per hundred. Geo. Gaul, Tipton, Iowa.

## OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

## THE MILKING MACHINE IN PRACTICAL OPERATION.

At a recent meeting of dairymen in Ohio the milking machine was discussed by a number of men who own and operate these machines. A number of interesting points were brought out and the possibilities of the milking machine were pretty well set forth.

One of the members stated that he had been using a machine since last June and found that one man with two pails could milk thirty-five cows in an hour and a half. He stated that it had not injured any of his cows so far as he had been able to learn. However, it seemed to be necessary to be careful about selecting the proper sized teat cups to fit the teats. When a cow was in the flush of milk it was necessary to use larger teat cups than later on in the period of lactation.

Another member stated that on his farm they were milking 200 cows and had twelve machines which had cost him \$2,000 to install. While he thought that, considering the depreciation of equipment and other incidentals, that it was no cheaper than hand milking, he stated in a reply to a question asked him why he installed the machines that the difficulty in securing labor made it absolutely necessary in order to continue his dairying. This man had used the machines since last August.

Another member had used three machines since October. He finds that one man can handle them and milk forty-five cows in an hour and a half. This is about as much as he thinks any man can do. This dairyman has a second man to look after the boiler, which increases the expense. However, this second man might be dispensed with were a gasoline engine used to operate the milking machines. Where steam pressure is used it was stated that the boiler pressure could not

drop below forty pounds as the suction was too weak to do good work.

In the general discussion it was brought out that it was necessary to manipulate the udders when using the milking machine. Some thought that by increasing the wages of the milker who handled these machines the service received had been increased in value proportionately. One point brought out in favor of mechanical milking was that heifers that had never been milked by hand took to the machine better than did old cows.

## Milk Fever in Cows.

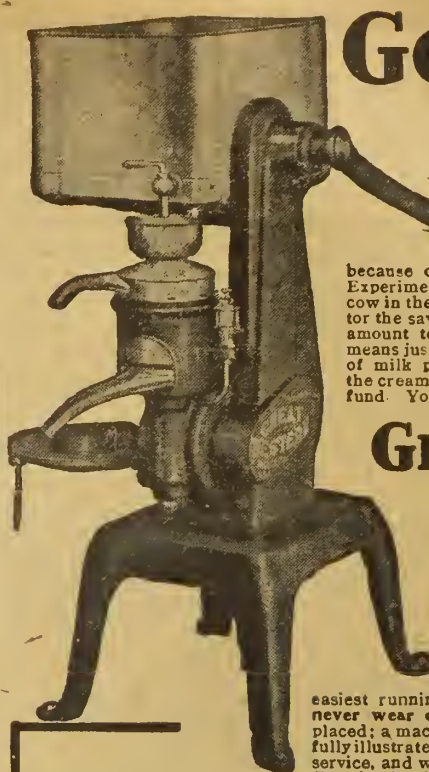

To the Editor of The Homestead:

Milk fever usually makes its appearance in from twelve to seventy hours after calving, and the sooner after generally the more severe the attack. The first symptom is that of restlessness, which is usually passed unnoticed. This is followed by excitement in which the animal stamps her feet, throws her head and has a wild appearance in her eyes, with dilated pupils. The cow may also bellow at times, and if the calf is present in the stall she will pass it unnoticed. These symptoms give way to muscular weakness, in which the animal staggers, loses power and falls to the ground. Efforts to rise become less and less effectual until she sinks into the deadly stupor so common to the disease. The udder, which a short time before was full of milk, is now soft and flabby to the touch. It contains little or no milk. The pulse is quickened, but weak and may be almost imperceptible. The cow assumes the position peculiar to the disease, that of lying on her breast bone with her head thrown well around to one side.

In treating milk fever the most common method used is inflating the udder with air. First of all, see that the cow is placed in an open field or lot free from dust and in the presence of bright sunlight. The air of filthy or even moderately clean stables where other animals are housed is known to be highly contaminated with bacteria, and such air if introduced into the udder will produce inflammation of the glands. The cow usually flounders around during her delirious efforts, but can be kept in position by propping her up with bags filled with hay or straw, which are also valuable in preventing injury to the animal. The arrangements for inflating the udder consists of a milking tube, a chamber containing sterilized absorbent cotton (through which the air is filtered), a rubber bulb and tubing. The tubing, milking tube and cylinder should be thoroughly cleansed by placing them in boiling water for at least fifteen minutes before using. Prepare a 2 per cent solution of carbolic acid and wash the udder and teats clean. Then place a clean boiled towel under the udder to prevent it from coming in contact with the dirt. Now take the tubing, attach it to the bulb and to the other end attach the cylinder. Another piece of tubing, with the milking tube inserted in one end, is now attached onto the free end of the cylinder, and the apparatus is ready for use. Do not crowd the cotton into the cylinder too tightly, as it will prevent the free filtering of the air through it. Without milking out the udder introduce the milking tube into the teat, and by working the bulb fill the corresponding quarter with air until it is well distended and tense. Remove the milking tube and tie a tape around the lower end of the teat to prevent the escape of air. Dip the milking tube into a clean carbolic solution before inserting it into another teat and then proceed as before until each quarter has been treated and is equally dilated.

Nothing more can be done now but keep the cow in position. If in two hours she fails to show signs of recovery, repeat the treatment as often as the slackness of the udder will permit until the cow rises to her feet. Passing of feces or urine is a good sign of recovery. The cow should not be milked for fully twelve hours after treatment, and only partially milked out for several days. She will not show much sign of hunger, and when she does a little hay and tepid water may be given her. Do not feed any concentrated food for at least forty-eight hours or more, but let her diet for some time be more of a laxative nature, and give her all the good spring water she will drink.

As a preventive measure in cows subject to this disease, avoid getting them in high condition previous to the time of calving. A cow that is a heavy milker should be compelled to take daily exer-

# Good Cows at \$15

Almost any man will pay that much for a first-class cow. Thousands of men have the cows but are losing \$15 on each one because of faulty dairy methods. Government and State Experiment Station reports show that if the milk from every cow in the country was passed through a first-class separator the saving to the cow owners of the United States would amount to \$200,000,000. It looks big but it's a fact. It means just \$15 less on each average cow by the employment of milk pans, cans and other gravity processes of securing the cream. Your cows may be helping to swell this mighty fund. You can stop your part of the loss by the use of our

## Great Western Cream Separator

Our catalogue tells all about this latest improved and most thoroughly up-to-date machine on the market, embodying everything which is best, such as a Perfect Skimming, Self-draining, and Self-washing Bowl, Low-down Supply Can, High Crank, Ball Bearings—hence the easiest running separator made; a machine with shafts that never wear out. Bearings that can be easily and cheaply replaced; a machine with all its gears running in a spray of oil. It fully illustrates and describes a machine that is always ready for service, and will last as many years as you continue in the Dairy Farming Business. This book illustrates and describes all the essential parts of the machine; it tells of what each piece is made and why. You will get more genuine information reading this book about separators than from any other source. You will get so thoroughly posted that no one can sell you a poor machine and get your good money. You want the very best and will find the GREAT WESTERN to meet every demand.

Our catalogue tells you all about milk, its composition, how and why the cream separates, how and why the milk sours, the changes that take place, why the cream does not separate by gravity when souring begins, why the sour milk is of so little value for feeding purposes, how much cream is lost by all the old methods of milk separation, i. e., the shallow pans, deep setting cans, dilution separators, etc. It explains how the GREAT WESTERN SEPARATOR saves all this cream, making a profit of 12 to 15 dollars for each cow you milk; it tells you of the best methods for raising calves and about the most prominent breeds of cattle; it tells what thousands of men have been trying for hundreds of years to accomplish and how we have succeeded; it tells you how to make your cows keep you instead of you keeping the cows.

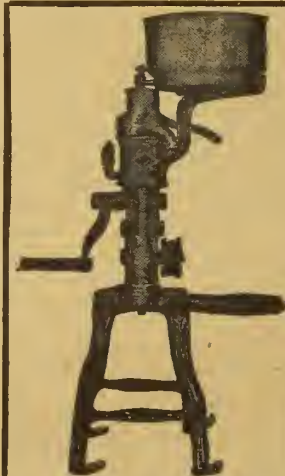

If you are milking two or more cows, write us at once as follows:

"I am keeping.....cows. Send me your Book No 4378 of the Great Western Cream Separator."

It is Free. Ask for it today.

Don't buy a separator of any kind or milk again until you send for our catalogue. Address

Smith Manufacturing Co., 158-164 EAST HARRISON ST., Chicago, Ill.

Before You Buy a Cream Separator  
You owe it to yourself to investigate

## The Peerless

BECAUSE: The Peerless is different from all others and its points of difference are in your favor.

It is the only machine that has a combination of the Hollow and the Disc bowl. That means double capacity or a smaller bowl for the same amount of work. That insures easier turning, less wear, easier cleaning and better cream—it doesn't break the large fat globules.

### It Skims to a Trace

## Yes, Something New!

### —THE— Monarch Cream Separator

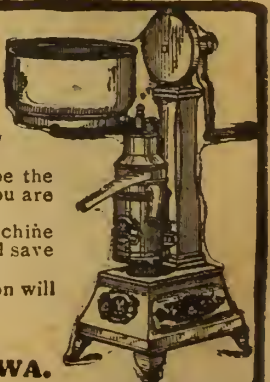

is a step in advance of all others. We guarantee it to be the lightest running and most convenient machine made. If you are needing a separator, why not get one up-to-date?

We have fewer parts to wear out, therefore it is a machine of longer life. It will not only save all your cream, but it will save your strength. Why buy a man-killer?

If we have no agent in your town, our cash proposition will save you money.

Write us for free catalogue and state the size of your dairy.

LISLE MFG. CO., Box 39, CLARINDA, IOWA.

cise before calving time, and her food should be restricted and of a laxative character previous to this time. It is also practicable to give a dose of Epsom salts (one to one and one-half pounds) a few days preceding the parturition period and a similar dose following the act. Good authorities claim that the number of cases of milk fever have been greatly lessened by only partially milking the cow out for a few days after calving.

James S. Sanders.  
Story County, Iowa.

### The Relation of Chemistry to Dairying.

To the Editor of The Homestead:

It is useless for us to ignore the fact that chemistry sustains a valuable relation to dairying.

While chemistry is commonly consid-

ered an exact science. I think all progressive dairymen will agree that exactness is the ideal standard which everyone should set for himself.

Dairying is an art, a business, an industry; incidentally let us remind ourselves that dairying is one of the greatest and most necessary, if not the most honored, industry of civilization. In this great industry there are but few servants more needful or more helpful than chemistry, when directed by men with brains. The associations of official agricultural chemists, at our experiment stations and elsewhere—are organized to discover and advance the truth and to point out and discard error. It is as much the duty of these stations to protect dairying from error as to afford new truth.

Farmers in general and dairymen in

## Lost Strayed or Stolen—One Cow

That is about what happens each year for the man who owns five cows and does not use a Tubular cream separator. He loses in cream more than the price of a good cow. The more cows he owns the greater the loss. This is a fact on which Agricultural Colleges, Dairy Experts and the best Dairymen all agree, and so do you if you use a Tubular. If not, it's high time you

did. You can't afford to lose the price of one or more cows each year—there's no reason why you should. Get a Tubular and get more and better cream out of the milk; save time and labor and have warm sweet skimmed milk for the calves. Don't buy some cheap rattle-trap thing called a separator; that won't do any good. You need a real skimmer that does perfect work, skims clean, thick or thin, hot or cold; runs easy; simple in construction; easily understood. That's the Tubular, and there is but one Tubular, the Sharples Tubular. Don't you want our little book "Business Dairymen," and our Catalog A, both free? A postal will bring them.

## BUY A SILO AND SAVE MONEY.

Read what Mr. T. E. Gunder of Ames, Iowa, says: "In regard to the silo I bought of you last year, I put about 100 tons of corn in it. I have enough ensilage to feed thirty cows six months giving them a liberal feed. They are making \$15.00 a week more than they did last winter, and my feed is not near so expensive. I would not think of getting along without a silo any more than I would without a barn. Everything on the place likes ensilage. Tell the farmers to buy them; they are all right."

particular are more and more coming to realize the value of our experiment stations in their work of heaving the way through the unexplored forests, thus saving the man who tills and the man who aulks, many costly experiments, which he has no means of finding out without the aid of chemistry. For example: Dr. Babcock, through his experiments and wonderful discoveries has given to the world methods of ascertaining with accuracy the value of milk and cream on the butter fat basis within a few minutes, thus enabling the farmer to detect robber cows and dismiss them from the herd and revolutionizing the method of handling cream.

By the chemical analysis of feeding stuffs and reducing their analysis to tabulated form, the farmers can figure out rations that are best suited to his animals, and which will accomplish the greatest possible results. It is only ignorance to say that dairying is simple. To analyze an unknown substance, to operate a mine or factory, to manage a bank, to drive a locomotive or bridge a chasm! These are simple compared to feeding a herd of cows to obtain the largest possible yield with maximum profit. The delicate and intricate organism of the animal; the almost endless variety of feeding stuffs with their different prices, composition and effects; matters pertaining to sanitation, com-

fort and convenience; testing, culling and grading of the herd, besides labor problems and marketing the product—these, and many other things furnish material to tire the most fertile brain in discovering the best methods throughout.

No wonder the up-to-date dairyman is calling chemistry to his aid, and calling to his aid the work of the experiment stations, for he has no time to spend with theories and untried methods.

Polk Co., Ia. O. O. Brewbaker.

### The Making of Cottage Cheese.

To the Editor of The Homestead:

Skim milk should be used in making cottage cheese, as whole milk loses much of its fat in the making. One hundred pounds of cheese. A small amount of starter is generally added to the milk, as it produces the desirable flavor in the cheese and a speedy souring of the milk. The starter may be prepared from fresh, clean milk placed in a clean, well-covered can, which has not only been thoroughly washed, but sterilized with hot water or steam. The temperature should then be raised to 94 to 98 degrees and allowed to stand for about twenty hours at a temperature of about 60 degrees. This starter should be well stirred and strained before it is added to the milk which is for the make of the following day.

To have the milk coagulate in twenty-four hours, which is very convenient, the temperature should be kept at about 70 to 75 degrees. When well curdled it is broken up with the hands or a knife and the temperature raised about a degree every two minutes until a temperature of 90 to 92 degrees is reached. This raising of the temperature is called cooking the curd. The curd should now be allowed to settle for about twenty minutes. The whey is then drawn off and the curd is placed in clean, sweet muslin bags and allowed to drain thoroughly. Flour sacks are very convenient for this purpose. When whey has ceased to come from the curd, it may be salted to suit the taste, which is generally about one ounce of salt to five to seven pounds of curd. The curd should now be formed into balls, or on squares about the size of one pound butter prints and wrapped in oiled paper such as is used cheese is very materially improved by for wrapping butter. The quality of the adding about an ounce of well ripened cream to each pound of curd before cheese is molded and wrapped.

The curdling process may be hurried by the use of rennet. The amount to be used depends upon the temperature and sourness of the milk, the strength of rennet and the time in which you wish the coagulation to take place. Seven ounces of rennet per thousand pounds of milk at 86 degrees will render the curd

ready to cut or break in about twenty minutes. This cheese may be made without the use of starter, but it requires thirty to forty-eight hours for the curd to coagulate if held at a temperature of 70 to 75 degrees. The use of starter is, however, desirable, as it produces the clean, mildly acid flavor in the cheese which is so desirable. If the cheese is sour it is due to the large amount of whey left in the curd. This condition may be remedied by cooking the curd a little longer or raising it to a higher temperature and allowing it to drain thoroughly.

One would naturally suppose that cheese of this kind would be very indigestible. By artificial digestion tests it was found to be more readily digested than cheddar cheese. This is said to be due to the fact that it does not "mat" together as does cheddar, thus allowing the digestive fluids rapid access to the fine particles. The whole process is simply the nominal souring of milk, mixed with a little care and a large amount of cleanliness, the three combined making a toothsome table dainty and a nutritious article of food.

To Distinguish Ganders and Geese.

To the Editor of The Homestead:

A subscriber asks for distinguishing marks of the Toulouse goose and gander. I stand in front or facing them and note the lower part of the body between the legs. The lower part of the body of the goose is in one lobe, while there is a crease dividing that part of the body of the gander into two lobes.

Mrs. H. F. Faris.

### SILo MAKERS BUSY.

If the popularity of a silo is indicated by the extent of its sale, the silo made by Mr. H. C. Hargrove, of Des Moines, Iowa, is taking well with farmers of Iowa and the corn belt. The company were one of the first in the field and the favor with which their silos are being received by stockmen and dairymen is a sure testimony to the superiority of this form of silo. All the modern features of a stave silo are embodied in this silo. The doorways are of the continued sort from top to bottom and silage need never be lifted to throw it into the chute. Limited space forbids us from going into detail. Mr. Hargrove will send a book free which explains all. Every farmer should acquaint himself with it. Address as given above, mentioning The Homestead. See page 8 for testimonials.

## WORLD'S BIGGEST CREAMERY ON BUYING CREAM SEPARATORS

The Beatrice-Continental Creamery Companies gather the cream from more than 50,000 Farm Cream Separators, nearly all of which are DE LAVAL machines, being by far the largest creamery concern in the world. Their advice may well be accepted as the highest possible authority by every intending buyer of a cream separator:

Topeka, Kans., March 26, 1907.

"We are sorry to note quite a tendency to buy cheap separators. If the farmer properly understood what he was doing he would not buy cheap machines from a 'mail order' house or anybody else. This is a case where the cheapest costs most and the best least, in the long run. These cheap separators only last a year or two and cause lots of trouble while they do last, whereas a good machine like the DE LAVAL will last ten to twenty years with proper care. However, the ability to RUN A HEAVY CREAM and skim clean is of even greater importance. Cheap 'mail order' machines skim cream of about twenty per cent. of fat. DE LAVAL machines easily skim forty per cent. cream. There is a big difference of course in the cost of transportation, and a still greater difference in the QUALITY of the cream when it arrives at the creamery. The thin cream will not keep sweet, especially in hot weather, and must frequently be made into second grade butter. The average farmer using a cheap separator loses from \$50—to \$60—annually through this cream difference alone,—usually to save \$25—or \$30—in first cost of the separator."

WORKS ABSOLUTELY PERFECT

It is the one cultivator that adapts itself to every condition of crop and soil. Gives clean, thorough cultivation wherever you use it. Its dodging devices are easiest to handle—most perfect in operation. Gangs can be controlled separately. Jockey regulates spread of gangs from a hair line to inches. With this implement a crop can be practically hoed. Telescope axle permits adjustment between wheels from forty-four to fifty-two inches. These are but a few of its unequalled advantages. If you are interested in cultivators, don't tie to any other machine until you see the J. I. Case Crank Shift work. Ask your dealer or write to us for special description. Our catalogue is free.

## The Empire Proves Its Claims

The cream separator of Quality—Quality in work and quality in construction—is the

Improved Frictionless

## Empire Cream Separator

In construction it is admittedly the simplest in principle. Its bowl is the lightest and turns the most easily. It is free of all complicated parts and is most easily washed. Its improved bearings make it as nearly absolutely frictionless as it is possible for a machine to be.

It is so well built and made of such good materials that it outlasts three or four ordinary separators, and very seldom needs repairs.

It gets all the cream and of the highest quality.

In convenience, in economy and in satisfaction, it is emphatically the Separator of Quality.

We Prove These Things. We don't ask you to take mere "claims." We give you proof. Send today for our new catalogue. It is well worth your while to find out about the Empire.

automobiles to the little simple conveniences which make city homes so easy to do the work in and enjoy—since that's the case, we advise our readers to write a postal card to Messrs. Haggard & Marcussen Co.'s factory in Chicago and they will send you their "Guide to Country Comfort" postpaid, with no cost to you. They are the makers of what is claimed probably the cheapest and most enjoyable chairs in the world—Comfort Swing Chairs. Lots of people in the country have Comfort Chairs now. They say they are easier than any other chairs ever made—easier than a hammock and delightfully restful chairs for both older people and the young folks or children. Just say you read this and write today to Messrs. Haggard & Marcussen Co.'s factory, 427 South Canal St., Chicago, Ill. You'll be glad you did. It will pay you to do it, too. See advertisement on page 16.

## HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

## SEED POTATOES.

When planting potatoes a number of questions arise, and practical men have various answers. Yet on some points they agree. If there are long sprouts break them off, or else plant very carefully leaving the top of the sprout almost even with the surface.

Cutting to one eye is practiced by some farmers. The seed end should be thrown away because it makes a number of weak sprouts. When two eyes are left to the piece and pieces dropped a foot apart in the row with rows three feet for cultivation, there is not too much seed.

Cutting a week before planting is a benefit if the seed is spread out thinly. That gives an opportunity for drying. But if left long in the bulk, boxes or barrels, it will spoil.

Planting whole potatoes is a practice that tends to deterioration. In that way you get too many sprouts close together. Some are crowded and produce weak, small potatoes.

It may be said of this crop, as of every other, that care in selecting seed and spacing it in the seed-bed, is richly rewarded.

## LIFTING THE MULCH.

Berrymen, especially amateurs, often take needless trouble in removing the mulch from the strawberry bed.

If the straw was put on loosely—an inch thick and has remained in place, do not remove it.

It is needed as much in summer as in

winter. Your plants will come through it, while it retains moisture and insures clean fruit. Even if the spring growth is retarded for a few weeks, all the better, for it helps you to escape late frosts.

But notice this, if the mulching lies in heavy bunches, being poorly spread, or having blown together, then you must remove it in part. You can readily see how much the plants can pierce, and should remove the rest to the paths.

## GROWING WATERMELONS.

In some particularly adapted localities watermelons grow almost as spontaneously as weeds, but in most places they require very special care without which it is impossible to grow them successfully. Yet there is no reason why every farmer should not have his own melon patch and grow sufficient of this juicy fruit to supply his wants throughout the melon season.

Most people make the mistake of planting melons on the richest soil on the farm. Instead they should select the poorest, sandiest, stoniest ground on the farm. This applies particularly to regions where the soil is black and heavy. Where sandy loam prevails any well drained location is suitable.

The ordinary preparation for the soil consists of a coating of manure, say fifteen to twenty-five tons per acre. A mixture of horse and cow manure is best for this purpose. This should be plowed in quite deep. The ground should then be well harrowed or disked.

It is next marked out for the hills which should be at a distance of about eight feet each way. Furrows are usually run in both directions, the hills made at the intersections. About half a peck of well rotted manure should be put at each of these intersections and covered with three or four inches of loose earth.

About a dozen seeds should be planted in each hill and covered to a depth of one and one-half to two inches. The planting should be done after danger of frost is passed, as the young plants are very easily destroyed. Germination may be greatly quickened by soaking the seed for forty-eight hours in luke-warm water just before planting them.

As soon as the young plants have made their appearance above ground the battle against natural enemies must begin. Cut-worms often threaten the success of the venture. The plants should be closely watched and when the work of the worms is observed they should be dug out and destroyed.

The greatest enemy, however, to be contended with is the striped squash beetle. These insects come in droves and will ruin a promising melon patch in twenty-four hours if they are not destroyed. For this reason a careful examination should be made every morning early at which time the insects are sluggish and cannot fly, hence they can be easily caught and destroyed.

The work of the squash beetle may be retarded to some extent by dusting the plants with air-slacked lime. This method is not absolutely sure, however, and even where lime is applied the plants still require considerable watching. In applying lime it should first be sifted, as it is the fine powder which impedes the insects in their progress. Care must be exercised that the lime is absolutely air-slacked, for if it is quick it will burn the plants.

By the time the plants have begun to vine a number will have been destroyed by the various enemies. As there is little further danger of damage when this point is reached, the number of plants should be thinned down to two in each hill. Here is where the great mistake of amateur growers is made; they often leave five or six plants in each hill, and as a consequence the vines become so thick that they cannot bear.

A melon patch requires close and careful cultivation. The small shoveled plow should be used about half a dozen times before the vines have grown long enough to interfere, at which time its use must be discontinued. The weeds in the hills must be pulled out and the ground which cannot be reached with the cultivator carefully hoed. When the vines have spread far enough to cover the ground further cultivation or care is usually unnecessary.
